THE DRONE DATABOOK

DAN GETTINGER

ABOUT THE CENTER FOR THE STUDY OF THE DRONE

The Center for the Study of the Drone at Bard College is an interdisciplinary research institution that examines the novel and complex opportunities and challenges presented by unmanned systems technologies in both the military and civilian sphere. By conducting original, in-depth, and inquiry-driven projects, we seek to furnish stakeholders, policy-makers, and the public with the resources to engage in a robust public debate and develop policies that best address those opportunities and challenges.

ABOUT THE AUTHOR

Dan Gettinger is the founder and co-director of the Center for the Study of the Drone.

ACKNOWLEDGEMENTS

The author is very grateful to the following people, without whom this publication would not have been possible. Samuel Bendett, Harry Boone, Ulrike Franke, Rob Lee, and Andreas Rupperecht provided expert insights. Arthur Holland Michel edited this publication. Madi Garvin, Erin Gifford, Erin O’Leary, and Isabel Polletta, and Lilian O’Donnell provided editorial support. Emily Wisseman contributed to the design.

Supported in part by a grant from the Open Society Foundations.

PREFACE

Once a novelty, drones have become standard military equipment, spawning a global network of units, bases, and test sites. Battlefields in Ukraine, Syria, and Yemen, as well as zones of geopolitical conflict such as the Persian Gulf and the East China Sea, are increasingly crowded with drones of varying size and sophistication. Whether they are used for intelligence gathering, aerial strikes, artillery spotting, or electronic warfare, drones are a leading contributor to the changing character of modern war.

The Drone Databook is a study of military drone capabilities. It is comprised of profiles of 101 countries in seven regions – Asia and Oceania, Eurasia, Europe, Latin America, the Middle East and North Africa, North America, and Sub-Saharan Africa – as well as two appendixes that address military drone infrastructure around the globe and the technical specifications of more than 170 drones currently in use by these countries. The *Databook* evaluates the military drone capabilities of each country in terms of six categories: inventory and active acquisition programs, personnel and training programs, infrastructure, operational experience, aircraft research and development programs, and exports.

INTRODUCTION

METHODOLOGY AND SCOPE

The Drone Databook is the result of a year-long study of open source literature on the development, acquisition, organization, and use of unmanned aerial vehicles in a military and security context. The *Databook* does not address drone acquisitions by non-military agencies or entities, most military drones that existed prior to the 1980s, or military unmanned ground or maritime vehicles. Primary sources cited in the *Databook* include official government statements and records, photographs and videos, social media, geospatial imagery, and technical data. Secondary sources include books, newspaper and journal articles, and research papers. Multilingual search methods were used to access certain primary and secondary sources. Free, public databases of military equipment exports, such as that of the Stockholm International Peace Research Institute, were consulted in some cases. Regional experts advised on the organization of forces and the translation of names and places.

Research into drone proliferation—and military capabilities in general—can be challenging. Different governments have varying degrees of transparency and sources may reflect conflicting, out-of-date, or partial information. It can be difficult to know with certainty whether, for example, a particular system or air base is in active use. As a general matter, the author has attempted to take a conservative approach when it comes to evaluating the status of a particular entity. The author has also added explanatory notes throughout to highlight areas of uncertainty and to place the available source material in context.

Part One of the *Databook* is comprised of country profiles for each of the 101 countries. Each country profile is organized according to region. Depending on the extent of a country's military drone activity and the available information, each profile contains up to six sections: Personnel, Inventory, Infrastructure, Operations, Development, and Exports.

Part Two is comprised of two reference sections. The System Specifications section lists the technical specifications for approximately three-quarters of the drones that are either active or in development. The bases reference contains satellite images for 85 airports and test sites.

The terms “unmanned aerial vehicle,” or “UAV,” and “drone” are used interchangeably in this study.

PROFILES GUIDE

INVENTORY

This section is comprised of tables for both active and inactive inventories, and a bulleted list of acquisition goals and programs. For each active and inactive system, the table contains the name of the manufacturer, country of origin of the manufacturer, system class (see “Systems Guide”), year of introduction (and deactivation, if an inactive system), user, and, whenever possible, the approximate number of aircraft and/or systems (which consist of multiple aircraft) acquired. (The number of systems is always within parentheses.)

The Active Acquisitions sub-section identifies ongoing procurement programs and/or plans, including:

- Acquisition programs in the pre-selection phase;
- Acquisition programs that have selected a system but will not introduce this aircraft for several years;
- Unconfirmed reports of plans to acquire unmanned aircraft.

PERSONNEL

The section lists the various units equipped with drones in the country’s military forces. Within the tables, two categories may cause confusion and so warrant some explanation:

- While most drone units in the *Databook* are dedicated solely to operating drones, some units have other roles such as operating radar or manned aircraft. “Type” refers to the degree to which drones are this unit’s primary responsibility.
 - » Drones are the primary responsibility of the “Dedicated” units;
 - » Drones are among the primary responsibilities of the “Partial” units;
 - » Drones are not among the primary responsibilities of “Not Dedicated” units either because these units have acquired a small number of systems or it is unclear how these systems are organized within the unit.
- “Activation” refers to the year in which this unit was formed or the year in which it began operating drones.
 - » If a unit has undergone a major reorganization in the time since it or one of its elements began operating drones, the “Activation” year reflects the year in which the new, reformed unit was stood up. Examples of major changes include a merger with another unit or a transfer to a different military branch. (If a unit was renamed without significant reorganization, the “Activation” year remains the year in which it was formed or the year it began operating drones.)

The Training sub-section describes the country’s principal training programs and academies for drone operators.

INFRASTRUCTURE

This section lists the bases, test sites, and training grounds that support drone operations. Each location here contains some piece of physical infrastructure—runways, hangars, training ranges—that is used in drone operations. As a result, this section typically only reflects infrastructure for larger Class II and III drones. This section does not usually include, for example, the location of the garrison for units operating Class I drones.

- “Primary” sites host a recent or sustained drone presence. For example, a base where there is a constant drone activity over a period of several years (such as a headquarters) or a base where there is repeated, intermittent drone activity (such as a test site). Unless there is evidence to the contrary, deployments within a year prior to publication are considered current.
- “Other” sites have hosted drone operations that are relevant to that country’s UAV operations or development, but may not host sustained or recent activity as of this writing. A common example of an “Other” site is an airport that was the site of a seemingly isolated series of drone flight tests. Some bases may be included in the “Other” table because their current status is unclear—if this is the case, it will be noted in the table.

OPERATIONS

The Operations section addresses the country’s record of using military drones in real operations, including both overseas and domestic deployments.

DEVELOPMENT

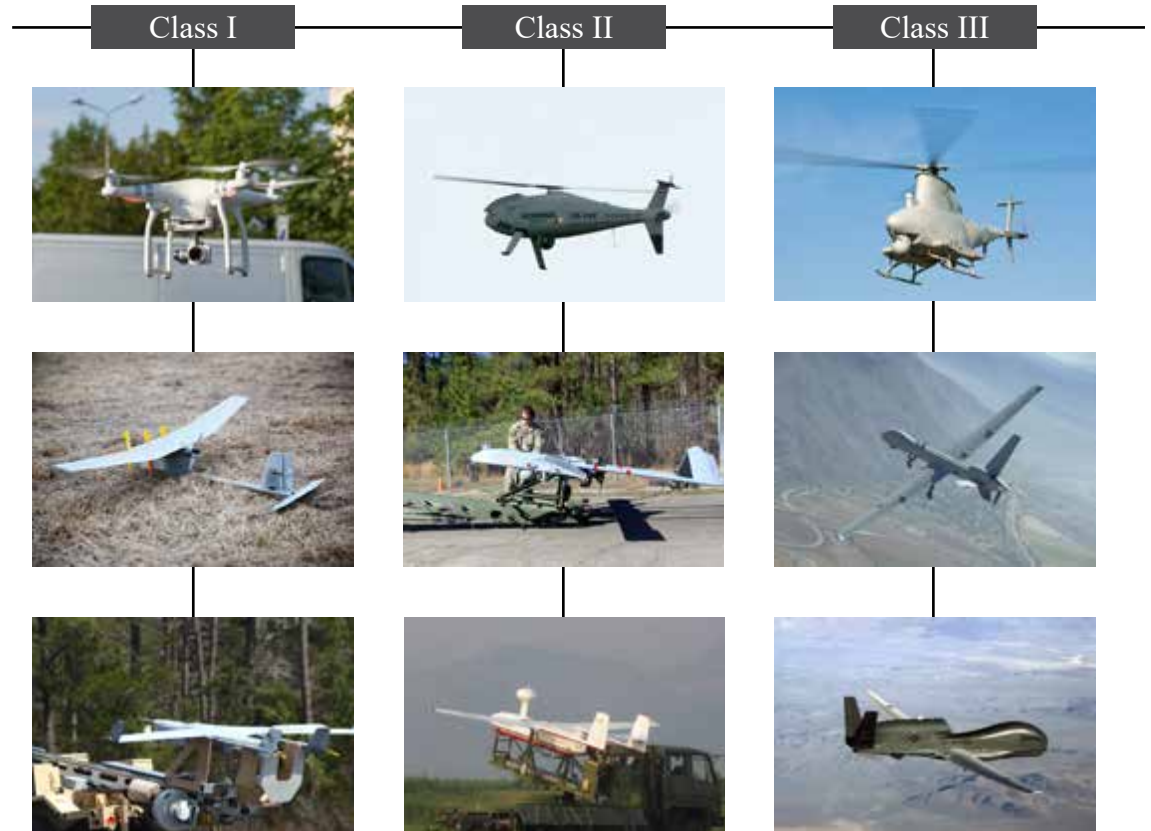

This section is comprised of a bulleted list of ongoing research and development projects that appear to be mostly or wholly defense-related. Each project description includes, where possible, the year the aircraft was unveiled, the year it made its maiden flight, and the official or reported timeline for the continuation of the program. This section generally does not address past R&D projects.

SYSTEM CLASSIFICATION GUIDE

Each of the drones in *The Drone Databook* are assigned a classification ranging from I to III based largely on their maximum take-off weight: Class I (less than 150 kilograms), Class II (150 to 600 kilograms), and Class III (more than 600 kilograms). These classifications are drawn from NATO Standardization Agreement 4670—NATO’s guidance for training drone operators.

- Class I encompasses an array of designs ranging from tiny handheld drones to larger, multirole systems. A typical Class I aircraft has an endurance of between one and three hours, a maximum range of approximately 80 kilometers, a payload capacity of 5 kilograms, and a top speed of 100 kilometers-per-hour. Class I aircraft are launched by hand or pneumatic rail and typically come equipped with an electro-optical and infrared sensor package. Class I includes both fixed- and rotary-wing aircraft, as well as a small number of hybrid UAVs that combine vertical take-off and landing and horizontal flight. The majority of Class I aircraft are used to carry out reconnaissance and surveillance missions and do not carry weapons. Loitering munitions—drones armed with a small explosive warhead and designed to explode on impact—are included in the *Databook* as Class I systems. The NATO definition of Class I includes three sub-categories—Micro, Mini, and Small—which, for the sake of simplicity, are treated equally as Class I systems in the *Databook*.
- Class II aircraft are sometimes referred to as “tactical” UAVs. A typical Class II aircraft has an endurance of 10 hours, a maximum range of between 100 and 200 kilometers, a payload capacity of up to 70 kilograms, and a top speed of 200 kilometers-per-hour. Class II systems may be fixed-wing—which typically require a small runway for launch or recovery—or rotary-wing in layout. A single Class II aircraft can be equipped with multiple payloads, such as electro-optical and infrared sensors, laser designators or illuminators for targeting, and communications relay equipment. While the majority of Class II aircraft are unarmed, some models can be equipped with lightweight ordnance, typically air-to-ground guided missiles similar to those used by manned attack helicopters.
- Class III aircraft are sometimes referred to as “medium-altitude long-endurance” (MALE) or “high-altitude long-endurance” (HALE) UAVs. A typical Class III system has an endurance of up to 24 hours or more, a payload capacity of several hundred kilograms, and a top speed of up to 300 kilometers-per-hour or more. Some Class III drones can be operated at a range of several thousand kilometers or more, though this depends on the communications equipment used. Class III includes both fixed-wing—which require a runway for launch and recovery—and rotary-wing aircraft. Many Class III aircraft are capable of carrying a mix of weapons, though some UAVs in this class are designed solely for intelligence-gathering. The NATO definition of Class III includes three sub-categories—MALE, HALE, and Strike/Combat—which, for the sake of simplicity are treated equally as Class III systems in the *Databook*.

Examples of Unmanned Aircraft According to Classification

Summary of Aircraft and Unit Classifications in the *Databook*

Aircraft Class	
I	< 150 kg
II	150 - 600 kg
III	> 600 kg

KEY FINDINGS

INVENTORY

Of the 101 countries in the *Databook*, 95 are believed to have an active inventory. The number of countries operating military drones of any kind has increased by an estimated 58 percent in the past decade.

Figure 1: Countries with an Active Military Drone Inventory

Aircraft Type and Class

Eighty-five countries currently operate Class I UAVs, 44 countries operate Class II UAVs, and 31 countries operate Class III UAVs. At least seven countries that do not currently operate Class III systems are believed to be in the process of acquiring a Class III capability. Of the 95 countries with an active inventory, 49 countries operate at least one from two or more classes, while 18 countries operate at least one drone from each class.

The *Databook* found 171 types of UAVs in active inventories. (For the purposes of this analysis, variants of the same system such as the IAI Searcher Mk 1 and the Searcher Mk 2 are considered as a single type unless there is a significant difference between the two in terms of physical characteristics or performance.) An additional 34 types of drones in the *Databook* are no longer active in any country.

Of the 171 active types of UAVs, 107 are Class I types, 36 are Class II types, and 28 are Class III types. There are 141 fixed-wing active types of drones and 30 rotary-wing UAVs. These 171 active drone types are produced by 108 entities in 43 countries. Eighty-two entities in 33 countries produce active Class I systems, 27 entities in 21 countries produce active Class II systems, and 18 entities in 7 countries produce active Class III systems.

Figure 2: Countries with Military Drones in 2010 and 2019

Aircraft Quantity

There are 21,000 confirmed unmanned aircraft currently in service around the world, though the actual number is likely more than 30,000. The *Databook* contains quantity estimates for approximately two-thirds of the systems in active inventories. It does not include quantity estimates for the active inventories of several countries including China and Iran, which both maintain significant stocks of unmanned aircraft.

Aircraft Origin

Sixty-three countries are believed to have an active inventory comprised mostly or wholly of foreign-made unmanned aircraft systems. Twenty countries maintain a mixed inventory of domestic and imported systems, while 12 countries maintain an inventory comprised largely of domestically-produced systems.

Nineteen countries have exported drones that are currently in active military service. Most foreign-made systems are acquired from China, Israel, or the U.S. Aside from the military services in these three countries, a total of 79 countries—83 percent—operate at least one active drone type made in China, Israel, or the U.S. Thirty-two countries operate at least one drone made in China, 39 countries operate at least one from Israel, and 49 operate at least one from the U.S.

Figure 3: UAV Exports by Country of Origin

Reflects the number of countries that are believed to have acquired at least one UAV of any class from one of the following countries of origin.

PERSONNEL

The *Databook* lists 269 drone units from 59 countries. Of these, more than three-quarters—217 units—are believed to be dedicated mostly or wholly to drone operations. Thirty-three units are believed to be partially dedicated to drone operations, while 19 units are not dedicated.

Eighty-seven units are equipped with only Class I systems. Sixty-six units are equipped with only Class II UAVs and 89 units are equipped with only Class III UAVs. Another 27 units are equipped with multiple classes of drones.

Of the 173 units for which an activation date is available, approximately two-thirds, or 113 units, are believed to have been activated in the past decade. Nineteen units were activated in 2018, the most of any year on record.

The oldest continually serving drone unit that remains active today is Israel's 200th Squadron, also known as the First UAV Squadron, which was stood up in 1971. Other drone units such as the U.S. 6th Reconnaissance Squadron also began operating drones in the mid-to-late 20th Century, but may have undergone one or more significant reorganizations since then.

At least 15 countries have established dedicated training academies for drone operators, though more countries may have UAV programs within other training schools. Ten countries have activated UAV training schools in the past decade.

Figure 4: Drone Units by UAV Equippage

Figure 5: Drone Units by Activation Year*

*The Activation Year is available for 173 of the 268 UAV units in the Databook.

INFRASTRUCTURE

The *Databook* identifies 236 airports, bases, and test sites in 61 countries. Of these, 193 are “primary” sites and 43 are “other” sites. (For the definition of “primary” and “other” sites, please see page III.) Seven countries—France, Germany, Italy, Russia, UAE, U.K., and U.S.—maintain active drone bases outside of their own borders. The U.S. has drones based in 13 countries.

At least 12 countries—Argentina, Azerbaijan, China, India, Iran, Israel, Poland, Russia, South Korea, Turkey, the U.K, and the U.S.—have established test sites or operational bases that appear to be mostly or wholly dedicated to military drones. These separate facilities may be created out of a concern about the safety of intermingling manned and unmanned air traffic or out of a need to meet operational or strategic requirements.

Figure 6: Drone Operations in the Middle East By Theater

OPERATIONS

Military drones have been deployed around the world in a variety of operations, including counterterrorism and counterinsurgency missions, peacekeeping, border security, counter-piracy, counter-narcotics, counter-smuggling, firefighting, and environmental protection.

At least 28 countries have deployed UAVs beyond their borders since the 1980s. Twenty-one countries—in addition to the Afghan National Army—have deployed drones over Afghanistan. At least eight countries have deployed drones for peacekeeping missions,

most prominently in deployments to the Balkans, Mali, and the Democratic Republic of Congo.

At least 10 countries—Azerbaijan, Israel, Iraq, Iran, Nigeria, Pakistan, Turkey, UAE, U.K., and U.S.—are believed to have used UAVs to conduct aerial strikes. Another 30 countries are believed to have acquired or are in the process of acquiring drones that are capable of conducting strikes, though many drones that can carry weapons are predominantly used for surveillance or for spotting targets for manned aircraft. The use of armed drones, particularly by the U.S., has spawned a global debate over the risks that remotely-operated weapons pose to civilians and to the stability of the nation in which the strikes take place. Many drones that carry weapons are predominantly used for surveillance and for spotting targets for manned aircraft.

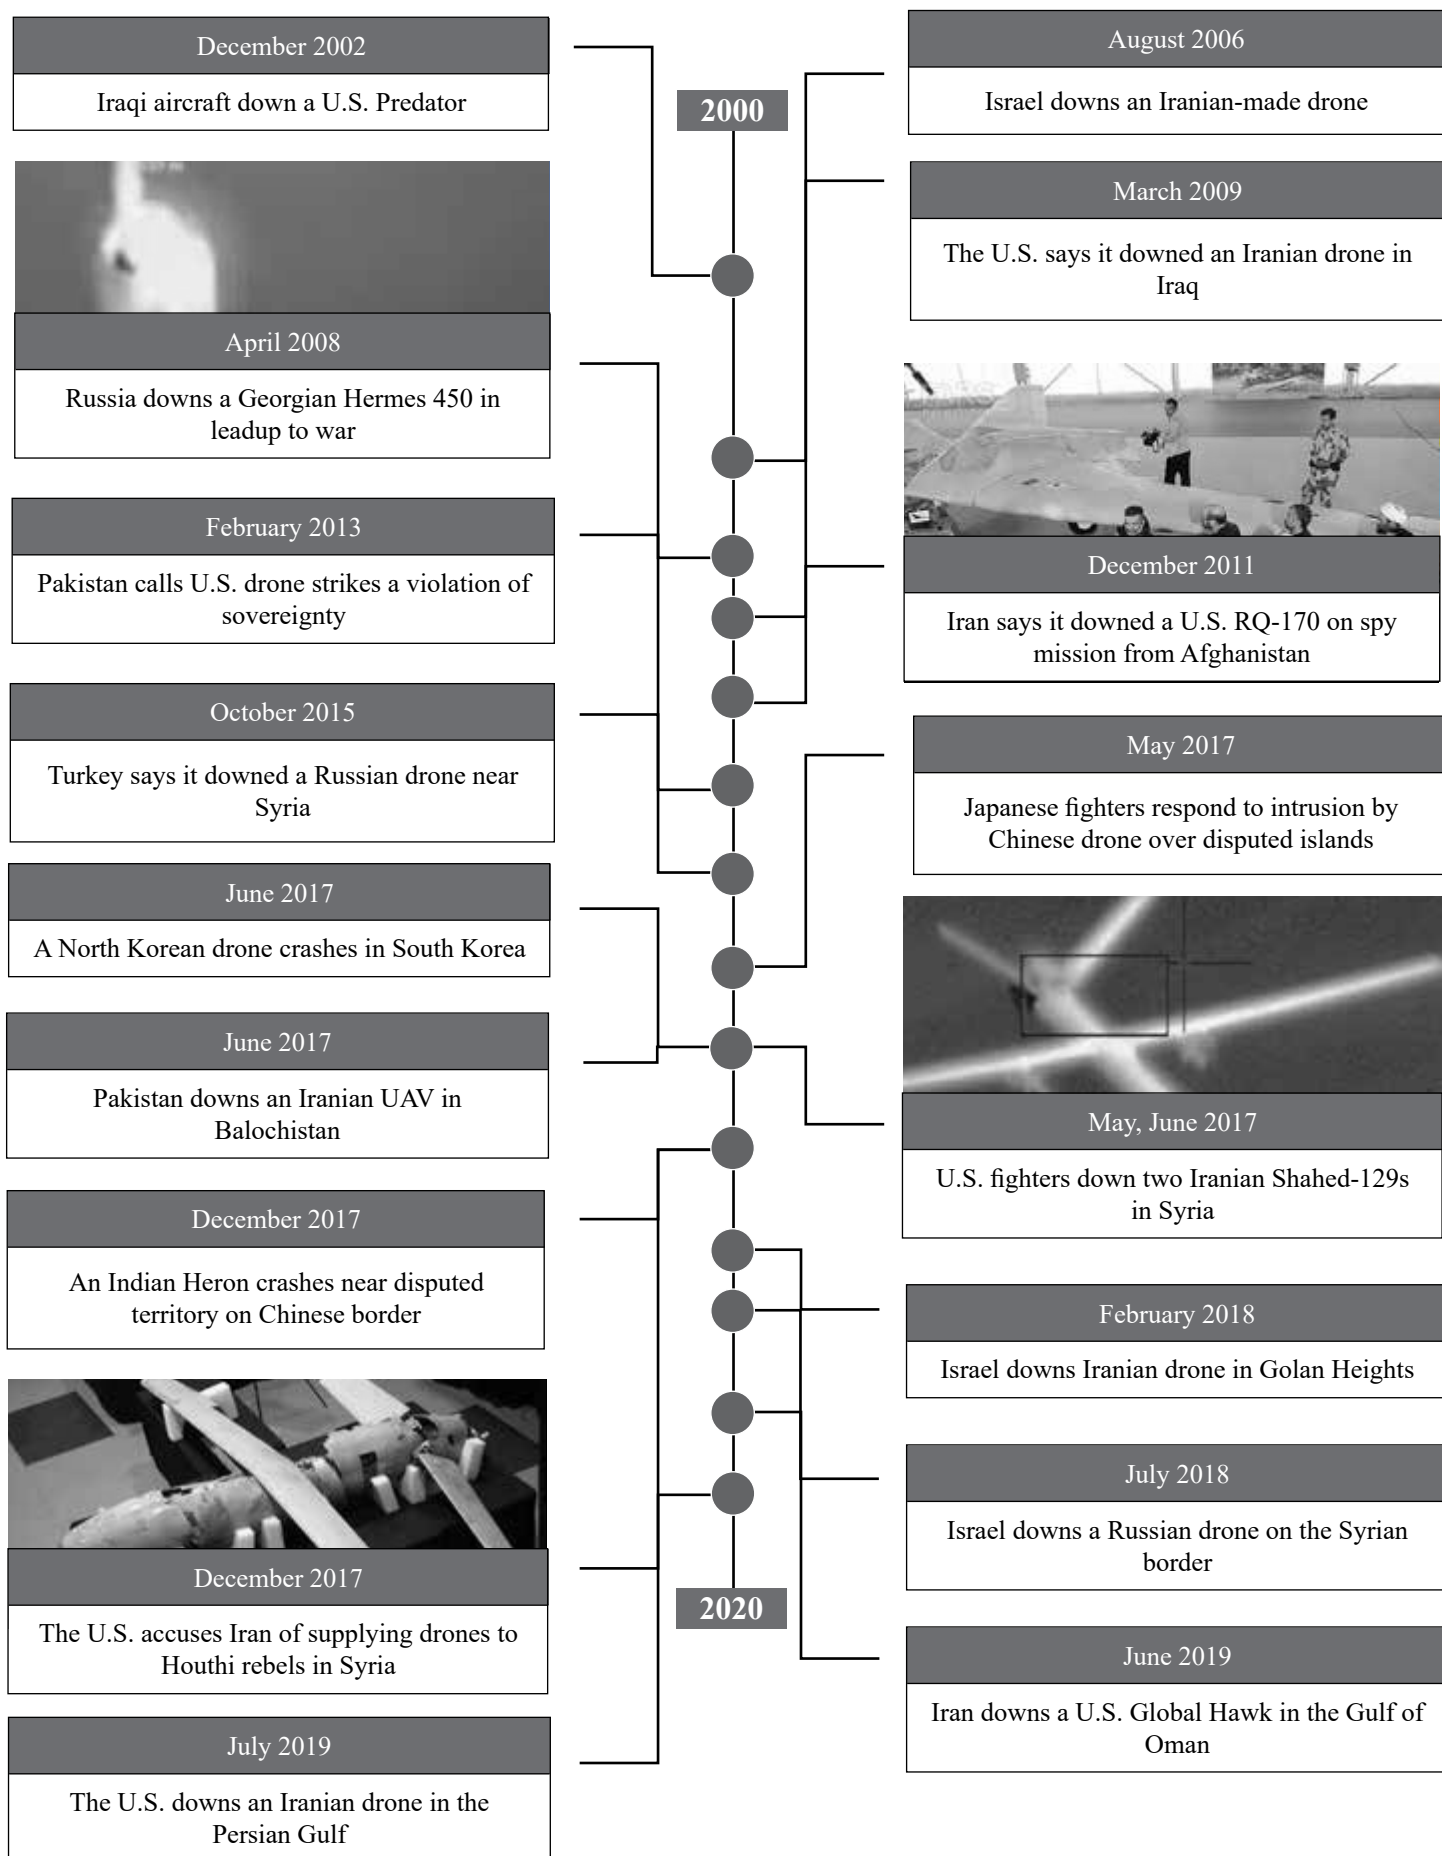

At least 16 countries are believed to be currently engaged in some sort of overseas military drone deployment as of this writing. Eight countries—Iran, Italy, Iraq, Russia, Syria, Turkey, the U.K., and the U.S.—are believed to be operating drones in Iraq and Syria. The U.S. is believed to be operating drones in eight other theaters, in addition to Syria and Iraq: Afghanistan, West Africa and the Sahel, Somalia, Yemen, the Philippines, the Korean Peninsula, Libya, and eastern Europe.

Drones have become a fixture of military operations in and around disputed border regions. Since 2013, China's East Sea Fleet has conducted periodic drone patrols over the Senkaku/Daiyou Islands, which are also claimed by Japan and Taiwan. Iran has established at least four drone bases bordering the Persian Gulf and has conducted regular overflights of U.S. naval traffic moving through the Gulf. In December 2017, an Indian Heron crashed inside China on the Doklam plateau, where India and China have competing territorial claims.

Military drones have been deployed to quell domestic uprisings and suppress minority populations in several countries. Turkey has made extensive use of Bayraktar-TB and Anka drones for surveillance and strikes in its military campaign against Kurdish militants. At least six—and as many as eight—bases have been established in southern Turkey for these drone operations. At various times since 2014, the PLA Air Force has based Wing Loong 1s and, later, Wing Long 2s, at Kashi Air Base and Hotan Airport in China's western Xinjiang province, where the Chinese government has been engaged in a massive campaign to repress the Uighur minority population.

Military drones are used in several different ways for non-military applications. At least seven countries—Chile, China, Croatia, Greece, Russia, Spain, and the U.S.—have used military drones to support firefighting operations. Croatia, Belgium, Italy, and Thailand have deployed drones to enforce environmental regulations. Colombia, Ecuador, and Mexico deploy drones in counter-narcotics and counter-smuggling operations. Brazil and France have used drones to provide surveillance during high-profile events.

Figure 7: Selection of International Incidents Involving Drones

DEVELOPMENT

At least 24 countries are currently developing new military unmanned aircraft. These projects include 10 Class I systems, 12 Class II systems, and 36 Class III systems. At least seven countries are exploring potential designs for next-generation drones, including stealthy aircraft (U.S., China, Russia, and France), high-altitude pseudo-satellites (U.S., China, U.K.), swarms (U.S., China, U.K.), and manned-unmanned teaming systems (Australia, Japan, U.K., China, and the U.S.). China appears to have the most active drone development programs of any country, with at least 11 parallel projects underway as of this writing.

At least 24 countries are believed to have licensed foreign drone technology for domestic production. These agreements can lead to the development of new variations of the original system. Russia, for example, is working on a strike-capable variant of the Israeli Searcher known as the Forpost-M. Pakistan has developed variants of China's CH-3 known as the Burraq and Shahpar.

A few countries have partnered with other countries to develop new drones or variants of existing systems. The largest partnership on an active drone development program is the EuroMale project, which involves five countries—the Czech Republic, France, Germany, Italy, and Spain—and is seeking to produce a Class III UAV. A mockup of the drone was unveiled in 2018 and a demonstrator aircraft is expected to fly in 2023. Other active development projects include a partnership between Spain and Colombia to develop the Atlante 2, a Class III UAV.

PREVIOUS PROLIFERATION STUDIES

At least a dozen extensive reports on military drone proliferation have been published in the past decade, several of which include estimates of the number of countries that have acquired drones. Given variances in scope and methodology, these figures may not track with the estimates offered in the *Databook*, or with each other. Nevertheless, each of these studies offers a valuable perspective on military drone proliferation.

ScanEagle Detachment, 201st Corps	FOB Gamberi, Laghman Province	D	ScanEagle	2017

TRAINING

- In 2016 the U.S. military opened the ScanEagle Training Facility at Camp Shaheen in northern Balkh Province to train members of the Afghan National Defense and Security Forces on the operation and maintenance of the ScanEagle, as well as to provide instruction in imagery interpretation.⁵ The school relocated to Kandahar Airfield in July 2018. Instruction is provided by U.S. military personnel and Boeing Insitu contractors.

OPERATIONS

- The Afghan National Army has deployed ScanEagles in operations against the Taliban and ISIS. Afghan Tactical Air Coordinators use drones to surveil targets and friendly forces, coordinate air-to-ground aerial fires, and conduct post-strike assessments. The Afghan National Army first deployed drones in an operational capacity with the 215th Corps in Helmand and the 209th Corps in Kunduz in mid-2017.⁶

MQ-4C Triton ⁷	Northrop Grumman	USA	III	2023	6	Navy	
MQ-9 Reaper ⁸	General Atomics	USA	III	2022	12-16	Air Force	

ACTIVE ACQUISITIONS

- The Army's Land 129 Phase 3 is a program to replace the RQ-7B Shadow with a new, runway-independent Class II tactical UAV that weighs less than 250 kilograms.⁹ As of May 2019, the Army was in the final stages of preparing an request for proposals for the \$282 million program.¹⁰ Once a new system is acquired, the Army plans to expand the 20th STA Regiment from two to three batteries by the mid-2020s.
- With the Land 129 Phase 4B program, the Army is evaluating a replacement for the Wasp AE. In April 2018, the Army awarded three Australian organizations—JAR Aerospace, SYPAQ Systems, and the University of Sydney—contracts to develop a next generation small UAV.¹¹ In February 2019 SYPAQ Systems announced that the Army had selected its Corvo X for additional development and capability demonstration.¹²
- Project Sea Phase 5 Maritime Tactical UAS program is evaluating the acquisition of a Class I or Class II aircraft for each of the Navy's surface warfare units. It is the successor program to the Navy Minor Project 1942, which managed the acquisition and evaluation of a limited number of CamCopter S-100s and ScanEagles.¹³ In February 2019 the Navy announced that it was streamlining its process for procuring a maritime drone; instead of a two-stage process for the Offshore Patrol Vessels and Future Frigates, it will seek one contractor to provide a UAV capable of operating onboard both types of vessels.¹⁴ The Navy is currently evaluating potential systems. The estimated total cost of this project is \$500 to \$750 million.
- The Air Force's Project Air 7000 Phase 1B is a program to acquire high-altitude long-endurance drones for maritime surveillance to supplement Australia's fleet of Boeing P-8A Poseidon manned patrol aircraft. In June 2018, Prime Minister Malcolm Turnbull announced that Australia would purchase six MQ-4C Tritons, although it may add a seventh aircraft at some point.¹⁵ Deliveries are expected to begin in 2023. As of early 2019, Australia had already invested over \$1 billion in the procurement of the aircraft and control systems; the total estimated acquisition cost is approximately \$5 billion.¹⁶
- The Air Force's Project Air 7003 Phase 1 is a program to acquire medium-altitude long-endurance UAVs to replace the Heron 1, which the Air Force leased for operations in Afghanistan and training between 2010 and 2017.¹⁷ In November 2018, the RAAF selected the MQ-9 Reaper over the Heron TP, though the exact Reaper variant that will be acquired remains unclear as of this writing.¹⁸ The RAAF expects the Reaper to enter into service between 2022 and 2023; the estimated cost of the project is between \$1 and \$2 billion.

PERSONNELARMY

Name	HQ	Type	Equipment	Activated
20th Surveillance and Target Acquisition Regiment, 6th Combat Support Brigade, Royal Australian Artillery ¹⁹	Gallipoli Barracks	D	RQ-7B Shadow, WASP AE	2006

The 20th STA Regt is comprised of the Regimental Headquarters, 131st Surveillance and Target Acquisition Battery, 132nd Unmanned Aerial Vehicle Battery, and Combat Service Support Battery. It is tasked with providing the Army with artillery spotting and tactical reconnaissance, as well as training other Army units in Class I UAV operations.²⁰ The 20th Regt is the successor to the 131st Bty, which had, served as the Army's primary, independent UAV unit before it was subordinated to the newly-created 20th Regt in 2006.²¹

NAVY

Name	HQ	Type	Equipment	Activated
822X Squadron, Fleet Air Arm	HMAS Albatross	D	ScanEagle, Camcopter S-100	2018

Initially stood up in 2011 as the Navy Unmanned Aerial Systems Unit (NUASU) to test drones for the Royal Australian Navy. In October 2018 it was redesignated the 822X Squadron in the Royal Australian Navy's Fleet Air Arm.²²

TRAINING

- Training of WASP AE operators takes place at the School of Artillery in Puckapunyal.²³
- Operator training for the RQ-7B Shadow consists of an 8-week course at the School of Artillery in Puckapunyal followed by 13 weeks of instruction at the 20th STA Regiment headquarters at Gallipoli Barracks.²⁴

INACTIVE

- The Royal Australian Air Force's No. 5 Squadron was responsible for flying the IAI Heron 1 in Afghanistan and, for a brief time, at RAAF Base Woomera. It was active from early 2009 until the expiration of the Heron I lease in 2017.

OPERATIONS

Country	Base	Equipment	Period	Operation
Solomon Islands		Aerosonde	2003	Anode
In 2003 the 131st Surveillance and Target Acquisition Battery, the precursor to the 20 STA Regiment, deployed to participate in Operation Anode, Australia's contribution to the Regional Assistance Mission to the Solomon Islands (RAMSI). ²⁵ It was the first operational deployment for Australia's Aerosonde, which flew 22 sorties and accumulated 106 flight hours over the course of the operation. ²⁶				
East Timor		Avatar, Skylark	1999-2001,2006	
Between 1999 and 2001, and again in 2006 and 2007, the 131st STA Battery deployed to East Timor for the International Force East Timor peacekeeping mission. ²⁷ The 131st was equipped with a small number Skylarks as well as four Aerosonde drones and several Codarra Avatars. ²⁸				
Iraq	Camp Terendak	Skylark, Scan-Eagle	2005-2007	Catalyst
In 2005 a portion of the 131st STA Battery deployed with the Al Muthanna Task Group, the Australian contribution to the Multi-National Force – Iraq. These troops were initially equipped with the Skylark. Following the 20th STA Regt's activation in 2006, the 131st Bty redeployed with the Skylark and ScanEagle. ²⁹ In an after-action review of the operation, the Australian Department of Defence reported that the units used drones to accompany convoys and to search for improvised explosive devices. ³⁰ The ScanEagles provided medium-range reconnaissance, augmenting the RAAF's manned Lockheed Martin P-3C Orion aircraft. Skylarks provided short-range reconnaissance capabilities.				
Afghanistan	Tarin-Kowt, Kandahar Airfield	Skylark, RQ-7 Shadow	2007-2014	Slipper
Between 2007 and 2014, the 20th STA Regiment deployed to Tarin Kowt, Afghanistan with the International Security Assistance Force, the NATO-led mission to Afghanistan. The unit was equipped with leased ScanEagles and Skylarks. The RQ-7B Shadow replaced the ScanEagle in mid 2012. ³¹ Separately, between 2009 and 2014, the No. 5 Squadron deployed to Kandahar Airfield with three Herons, which went on to accumulate over 27,100 flight hours before the deployment ended in 2014. ³²				
Middle East Region	HMAS Newcastle	ScanEagle	2017	Manitou
In 2018 the Royal Australian Navy deployed ScanEagles on board the HMAS Newcastle for Operation Manitou, the RAN's designation for all Australian maritime operations in the Middle East region since 1990. ³³ It was the first operational deployment for the Navy Unmanned Aerial Systems Unit.

DEVELOPMENT

- The Airpower Teaming System is a Class III fixed-wing concept drone designed by Boeing in partnership with the Royal Australian Air Force. The “loyal wingman” system is designed to accompany manned fighters in combat operations, providing off-board sensing to the aircraft pilot. It was unveiled at the Australian International Airshow at Avalon in February 2019.³⁴ Flight testing will reportedly begin in 2020. Australia will invest \$28.7 million into the development of the drone. It will be Australia’s first domestically-produced aircraft since World War II.

ACTIVE ACQUISITIONS

- In December 2017, as part of the Forces Goal 2030 modernization program, the Bangladesh Air Force released a request for proposals for a medium-altitude long-endurance drone with a minimum endurance of 15 hours and range of 1,000 kilometers.² According to a February 2018 report by FlightGlobal, Bangladesh is reportedly in active discussions with Turkish Aerospace Industries to acquire the Anka system to fulfill this requirement.³
- In March 2019 the U.S. Department of State pledged to provide Bangladesh with \$13 million in assistance to acquire drones that could be deployed in United Nations peacekeeping operations.⁴ As of this writing, it is not clear how this assistance relates to Bangladesh's plans to acquire a MALE system as described above.

GENERAL STAFF

Name	HQ	Type	Equipment	Activated
Strategic UAV Scout Force, Intelligence Bureau, Joint Staff Department ⁶	Beijing-Shahe Air Base	D	BZK-005	Late 2000s

AIR FORCE

Name		HQ	Type	Equipment	Activated
178th UAV Brigade (Unit 95835) ⁷	178无人机旅驻地 (95835 部队)	Malan Air Base	D	Wing Loong 1, Wing Loong 2	2011

The 178th UAV Brigade is responsible for training pilots and sensor operators and expanding the integration of drones into the PLAAF. It is likely equipped with both Wing Loong 1 and 2s, which are known in the PLAAF as Gongji-1 and Gongji-2, respectively. Media reports suggest that the 178th may also be equipped with other systems, such as the Divine Eagle or the Xianglong.

151st UAV Brigade ^{8,9}	151无人机旅驻地	Cangzhou/ Cangxian Air Base	D	Wing Loong 1	
----------------------------------	-----------	-----------------------------------	---	-----------------	--

Not much is known about the 151st UAV Brigade except that it may serve as a training unit for Wing Loong 1 pilots and sensor operators.

NAVY

Name		HQ	Type	Equipment	Activated
UAV Regiment, East Sea Fleet	无人机团	Daishan Air Base	D	BZK-005, BZK-007, ASN-209	Mid-2010s
The East China Fleet's UAV Regiment is primarily based at Daishan Air Base on Daishan Island, although operations were temporarily relocated to Ningbo Air Base in 2016 while Daishan underwent renovations. Operations at Daishan restarted in 2018 or 2019. A March 2019 satellite image of Daishan shows seven BZK-005s and two BZK-007s at the base.					
UAV Regiment, South Sea Fleet	无人机团	Lingshui Air Base, Sanya Air Base	D	BZK-005	Mid-2010s

OTHER

- In The PLA's Unmanned Aerial Systems, Elsa Kania notes that it is probable that the PLAAF will activate new Wing Loong 1 units in the near future.¹⁰ Photos published to social media in February 2019 indicated that a new unit may have already been activated. The photos, which were taken at Mangshi Airport, depicted a Wing Loong 1 with a serial number that suggested it belonged to a unit in the Western Theater Command.¹¹
- The PLAAF may have activated one or more units equipped with the Xianlong and other drones. A unit equipped with the Xianglong may have been activated with the Northern Theater Command at Yishuntun Air Base.¹² Meanwhile, another unit equipped with the BZK-005 or BZK-007 may have been activated at Xintai Air Base.¹³ It is not clear whether these deployments are associated with a new or existing unit.

TRAINING

- Multiple PLA academies offer training courses for UAV personnel.^{14,15} As of 2016, these include the Air Force Early Warning College, Air Force Engineering University, Armored Force Engineering College, Army Officer Academy, Naval Aviation Engineering Academy, PLA Institute for International Relations, PLA Ordnance Engineering College, and PLA Special Operations Academy.

OPERATIONS

- Since 2013, the East Sea Fleet has conducted periodic drone patrols over the Senkaku/Diaoyu Islands, which are also claimed by Japan and Taiwan. In September 2013 the Japanese Ministry of Defense scrambled fighter jets to intercept a drone flying over the area. Photographs of the aircraft subsequently published online show what appears to be a PLAN BZK-005.¹⁶ In April 2018 Japan's Self-Defense Forces identified a PLAN BZK-005 flying over the East China Sea.¹⁷
- The PLAN has also deployed drones with the South Sea Fleet, potentially to surveil disputed territories in the South China Sea. In 2016, a BZK-005 was temporarily deployed to Woody Island.¹⁸ In 2016 and 2017 BZK-005s were based at Lingshui Air Base on Hainan Island. Several Xianglongs were also deployed to Lingshui by either the PLAN or the PLAAF in 2018.¹⁹ That same year, the Navy's BZK-005 drones were re-located from Lingshui to Sanya Air Base, a small naval air station adjacent to the headquarters of the South Sea Fleet at Yulin Naval Base.
- Beginning in 2014, the PLAAF based several drones at Kashi Air Base in the western Xinjiang province. According to press reports at the time, the deployment may have been part of a government crackdown on China's Uighur minority population.²⁰ Subsequent satellite imagery indicates that Wing Loong 1s appeared at Kashi Air Base several times between 2014 and 2018, though it is not clear that these represent a single, sustained deployment. In the fall of 2018, satellite images show that the PLA replaced the Wing Loong 1s at Kashi Air Base with at least three Class III UAVs, which are most likely Wing Loong 2s.²¹
- In early 2017 a subsidiary of the China Aerospace Science and Technology Corporation (CASC) deployed a CH-4 to Mohe Gulian Air Base to assist firefighting efforts in Heilongjiang province.²²
- In mid-2017, amid growing tensions with India over the disputed Doklam Plateau, the PLAAF deployed a CH-4 and several Xianglongs to Shigatse Air Base; concurrently, a BZK-005 appeared at Gonggar Air Base.²³ Commercial satellite images of the two bases from late 2018 suggest that the Xianglong mission at Shigatse was ongoing, though it was unclear whether the CH-4 and BZK-005 were still present at either of the facilities.
- In early 2018 several Xianglongs were deployed to Yishuntun Air Base in northeast Jilin province. A media report suggested that the drones could potentially be used to surveil China's border with North Korea, which lies approximately 320 kilometers southeast of Yishuntun.²⁴ Satellite images show that four Xianglongs remained at the base as of late 2018.²⁵
- In October 2018 the PLAAF deployed two Wing Loon 1s to Dehong Mangshi Airport, a mixed civil-military airport situated on China's border with Myanmar in Yunnan Province.²⁶ Photos of the drones posted to social media suggest that they belong to the unit attached to the Western Theater Command.²⁷

DEVELOPMENT

- The Wing Loong ID (翼龙ID) is a Class III fixed-wing system developed by Aviation Industry Corporation of China (AVIC). A scale model of the Wing Loong ID's design, which is based on the Wing Loong 1, was unveiled at the 2016 Zhuhai Airshow. A prototype aircraft made its maiden flight at Anshun Huangguoshu Airport on 23 December 2018.⁴¹ The ID is intended for the export market and is expected to make its first deliveries in the coming years.⁴²
- The Divine Eagle (神雕) is a Class III fixed-wing system developed by Shenyang Aircraft Corporation's 601 Institute. Photos of the Divine Eagle first emerged on Chinese websites in 2015.⁴³ With a 45-meter wingspan, the Divine Eagle is among the largest drones in the world. It has conducted test flights at Shenyang Beiling Air Base and Anshun Airport. A November 2018 media report suggested that the Divine Eagle may have already entered into service with the PLAAF.⁴⁴ However, this has not been independently confirmed.
- The Cloud Shadow (云影) is a Class III fixed-wing drone developed by AVIC. It was unveiled at China's Zhuhai Airshow 2016.⁴⁵ The Cloud Shadow features a WP-11C turbojet engine, sleek fuselage design, and bulbous nose. It is designed to carry out high-altitude surveillance and strike missions. At the time of unveiling, AVIC announced that it would also be available for export to international customers.
- The AV500W is a Class II rotary-wing UAV developed by AVIC. It was unveiled at the 2016 Zhuhai Airshow. It is notable for being China's first strike-capable unmanned rotary-wing aircraft.⁴⁶ In November 2018, Chinese media reported that the AV500W had carried out a successful strike test, destroying a target with an FT-8D air-to-surface missile at a distance of 4.5 kilometers.⁴⁷ In June 2019, AVIC announced that the AV500 had carried out a successful nighttime drill.⁴⁸
- The TB-001 is a Class III fixed-wing drone developed by Tengono Technology. It was unveiled at the 14th China-ASEAN Expo in 2017 in Nanning.⁴⁹ Also known as the "Twin Tailed Scorpion" (双尾蝎), the TB-001 features a twin-engine, twin-boom design. It conducted its first flight tests at Liangping Airport in Chongqing province in 2017. SF Express, the Chinese package delivery firm, has conducted field tests of a TB-001 modified for cargo operations in Yunnan province.⁵⁰ Tengono has also unveiled a smaller version of the TB-001—the TA-001—as well as two rotary-wing aircraft, the HA-001 and HB-001.
- The Caihong-7 (彩虹-7, or CH-7) is a Class III jet-powered flying-wing system developed by the 11th Research Institute of the China Aerospace Science and Technology Corporation (CASC). It was unveiled in 2018 at the Zhuhai Airshow.⁵¹ It is scheduled to begin flight tests in 2019 and production by 2022. According to media reports, the CH-7 could be sold for export.⁵²
- The Tian Ying (天鹰) is a Class III fixed-wing drone developed by the 302nd Institute of the China Aerospace Science Industry Corporation (CASIC). Like the CH-7, the Tian Ying has a tailless flying-wing design, though it is only half the size of the CH-7, with an estimated 10-meter wingspan. CASIC published blurred photos of an aircraft thought to be the Tian Ying in early 2018, reporting that it had conducted its first flight tests in late 2017.⁵³ It was officially revealed at the 2018 Zhuhai Airshow.⁵⁴ In January 2019, CASIC published a video of the Tian Ying conducting flight tests at Baotou 2 Airport in Inner Mongolia province.⁵⁵
- The JY-300 is a Class III fixed-wing system developed by the Institute 38 at the China Electronic Technology Group Corporation. It was unveiled in 2018 at the Zhuhai Airshow.⁵⁶ The JY-300 is designed to serve as an early warning aircraft, with miniature phased-array radar strips lining its fuselage. In 2018, it conducted flight tests at Pucheng Neifu Airport in Shaanxi province.
- The Fei Long-1 (飞龙-1) is a Class III fixed-wing UAV developed by Zhong Tian Guide Control Technology Company (ZT Guide). It was unveiled at the 2018 Zhuhai Airshow. In January 2019, ZT Guide announced that it had conducted its maiden flight in a test at Pucheng Neifu Airport in Shaanxi province.⁵⁷
- The Yaoying-2 (鸢鹰-II) is a Class III fixed-wing UAV developed by GAIC, a subsidiary of AVIC. Also known as the "Air Sniper," the Yaoying-2 is a strike-capable system with a 16 hour endurance and 200 kilometer operational radius. It is the successor to the Yaoying-1, which was unveiled in 2011. The Yaoying-2 conducted its maiden flight at Anshun Airport in July 2018.⁵⁸ According to media reports, AVIC is hoping to market the aircraft to foreign customers.
- The Qi Mingxing (启明星) is a Class III fixed-wing solar-powered UAV developed by AVIC. A scale model of the aircraft was publicly displayed in July 2018. A demonstrator aircraft conducted its first flight in October 2018.⁵⁹
- The Feihong-98 (飞鸿-98) is a Class III fixed-wing system based on the Antonov An-2, a manned Soviet-era biplane that China has produced under the name Shifei Y5B since the 1950s. With a reported maximum payload of up to 1.5 tons, the Feihong-98 is among the largest UAVs in the world.

It conducted its first flight test at the Baotou test site in October 2018.⁶⁰ According to a media report, in June 2019 the National University of Defense Technology and the China Aerospace Science and Technology Group conducted a drill in which a Feihong-98 autonomously airdropped a 500-kilogram resupply package at a distance of 500 kilometers.^{61,62} Unlike earlier flight tests, this exercise took place at Zhangye Danxia Airport, a new airfield in Zhangye, Gansu Province.

- The SD-40 Sea Cavalry (海骑兵) is a Class I fixed-wing vertical take-off and landing UAV developed by Han's Eagle Aviation Technology Company. The SD-40 reportedly conducted its maiden flight in July 2017.⁶³ In 2018 Han's Eagle conducted several flights in northeast China to demonstrate the SD-40 as a tool for aiding firefighters.⁶⁴ In 2019 the PLAN conducted a training exercise with the SD-40 on board a *Luyang II*-class destroyer.⁶⁵

Heron 1	IAI	Israel	III	2002	Navy, Air Force

ACTIVE ACQUISITIONS

- India is exploring the possibility of acquiring a number of GA-ASI MQ-9 Reapers from the United States. According to media reports in 2018, the acquisition is a strategic priority for Indian Defense Minister Nirmala Sitharaman. Indian officials have reportedly pressed U.S. diplomats to approve the sale of armed Reapers, in particular, which are subject to tighter U.S. export restrictions compared to unarmed drones.² The U.S. has also reportedly offered the Indian Navy the GA-ASI Guardian, a maritime variant of the Reaper.³ U.S.-India negotiations for the sale of Reapers or Reaper variants—armed or unarmed—remain unresolved as of this writing.
- In July 2018 the Ministry of Defense announced plans to acquire 1,800 Class I UAVs and create 600 Army squads for the operation of those systems.⁴ The Army awarded BlueBird a contract for an unknown number of BlueBird Spylite systems in September 2018.⁵ The Army decided on the Spylite after it performed favorably in high-altitude tests, a key requirement of the competition. BlueBird has partnered with Hyderabad-based Cyient Ltd. to manufacture and deliver the aircraft.⁶ More Army contracts for Class I drones are expected to follow, although it's not clear whether they will be for the Spylite or another system.

OPERATIONS

- India has frequently deployed drones for border surveillance, particularly along its borders with China and Pakistan. In December 2017 an Indian Heron crashed on the Chinese side of the border near the Doklam Plateau, where India and China have competing territorial claims.¹⁴ The incident, which took place months after a standoff between Indian and Chinese personnel on the plateau, led China to protest the “air intrusion.” Meanwhile, Indian Herons have been deployed to at least four bases in northwest India—Tezpur Air Force Station in 2015, Bagdogra Air Force Station in 2017 (and possibly to this day), and Chabua Air Force Station in 2018, and Kumbhirgram Air Force Station in 2019.¹⁵ For years, Indian Herons have also been based at Leh, a city in the Himalayan Mountains near Aksai Chin, another border area that is disputed between China and India. Meanwhile, Indian Searcher Mk IIs have been deployed to Jaisalmer and Nal air bases along the border with Pakistan. In 2015 the Indian Navy dispatched a Heron and Searcher Mk II to Port Blair to monitor maritime traffic around the Andaman and Nicobar Islands.¹⁶
- India has also deployed drones for operations in Jammu and Kashmir province. Two Indian Air Force UAV squadrons are believed to be based in Jammu and Awantipora air force bases. In late 2016, following a period of particularly intense unrest, the Indian Air Force said that it was putting each of its bases in the region under drone surveillance.¹⁷ In November 2018 India's army chief said that it would not hesitate to use armed drones in the region, provided there was no significant public or international resistance to the idea.¹⁸
- In the early 2010s, Indian Air Force personnel and Herons participated in National Technological Research Organization operations against Maoist groups in central India.¹⁹

DEVELOPMENT

- The Rustom-2 is a Class III fixed-wing surveillance and reconnaissance drone under development by the Defense Research and Development Organization (DRDO). The Rustom-2, which features a twin-engine design, will be India's first domestically produced operational medium-altitude long-endurance system. The project was unveiled at the 2010 Aero India Show.²⁰ The Rustom-2 made its first flight in 2016 at the Chitradurga range, the principal test facility for the program.²¹ DRDO intends to produce 10 Rustom-2 aircraft to be delivered to the Indian armed forces by 2020.²²

ACTIVE ACQUISITIONS

- The Indonesian Air Force is seeking to acquire a strike-capable Class III medium-altitude long-endurance drone. In February 2018 the Ministry of Defense announced that Indonesia would acquire four AVIC Wing Loong 1s from China.⁷ However, the contract was cancelled and the acquisition process re-started in November 2018 following domestic criticism that it did not involve Indonesian companies.⁸ Turkish Aerospace Industries has partnered with PT Dirgantara Indonesia to offer the Anka for the program.⁹

The 101st Target Drone Unit provides target drones for anti-aircraft artillery practice. It was known as the 101st UAV Unit (第101無人偵察機隊) until June 2019, when it was redesignated the 101st Target Drone Unit (第101無人標的機隊). ¹⁵					

OPERATIONS

Country	Base	Equipment	Period	Operation
Iraq		RMAX	2006	
The Self Defense Forces deployed the RMAX with the Japanese Iraq Reconstruction and Support Group, a humanitarian mission to Samarra, Iraq. ¹⁶ The drone was used to provide base perimeter security.				

DEVELOPMENT

- In the mid-1990s, the Japan Air Self Defense Forces began working on a high-speed, air-launched, multi-role drone known as the TACOM (an acronym based on the Japanese designation, 無人機研究システム), awarding Fuji Heavy Industries (Subaru) a contract in 1995 to develop a prototype system. The TACOM was designed to accompany manned fighter aircraft into combat, similar to the “loyal wingman” concept that is currently the subject of research projects in several countries. The JASDF began flight testing of initial prototypes in the early 2000s. Work on a new variant began in 2004 and continued into the early 2010s. In 2016, the Ministry of Defense announced that it was developing a

family of “loyal wingman” drones known as the Combat Support Unmanned Aircraft (戦闘支援無人機). These drones would fly ahead of fighters, serving as reconnaissance, attack, and decoy platforms for their manned counterparts. As of the 2016 plan, the MoD expects to be able to field these drones in the 2030s.

ACTIVE ACQUISITIONS

- Under the the Royal Malaysian Air Force’s Capability 2055 modernization program, the Air Force is exploring the possibility of acquiring medium-altitude long-endurance drones for maritime surveillance.⁶ The RMAF is believed to be evaluating three aircraft—the TAI Anka, GA-ASI Sea Guardian, and AVIC Wing Loong 1—for the program.^{7,8} In a March 2019 interview, the head of the RMAF said that procuring a MALE UAV was a top priority.⁹

COAST GUARD

- The Malaysian Maritime Enforcement Agency—Malaysia's coast guard—acquired the Fulmar X for the New Generation Patrol Craft (NGPC) program. The first NGPC was launched in March 2017.¹³ The MMEA intends to field a total of six NGPC vessels, each equipped with a small number of drones.

DEVELOPMENT

- The Aludra Camar is a Class I fixed-wing drone developed by DRB-HICOM Defense Technologies (Deftech) with Universiti Teknologi Malaysia. It is expected to have a 4-meter-long wingspan and maximum take-off weight of 40 kilograms. A scale model was unveiled at the DSA 2018 defense expo.¹⁴

MYANMAR

INVENTORY

- Myanmar has reportedly acquired several CASC CH-3As from China, although there is not much evidence of this acquisition or that these aircraft remain active. Photos published online in 2015 showed several CH-3As parked outside of hangar at Meiktila Air Force Base in central Myanmar.¹ Media reports in 2016 suggested that Myanmar may have deployed the CH-3A to counterinsurgency operations in its northeastern provinces.² These reports were based in part on a widely-circulated cell-phone photograph purportedly taken in Myanmar showing a CH-3A parked on a runway.³

ACTIVE ACQUISITIONS

- The Joint Remotely Piloted Aircraft Systems (Joint RPAS) project is a plan to acquire Class I UAVs for the Army and Navy. The New Zealand Defence Forces intend to introduce these systems by 2021.^{7,8}
- In the *Defence Capability Plan 2019*, the New Zealand Ministry of Defence laid out a plan to acquire long-range unmanned aircraft systems by the 2030s.⁹ These aircraft will be used to provide sustained surveillance capabilities for both ground and maritime forces. Though the MoD did not specify the exact type of UAV it intends to acquire, it will likely be some type of Class III UAV based on the description of desired capabilities.

NORTH KOREA

INVENTORY

- North Korea has a fleet of between several hundred and one thousand domestically-produced variants of imported Class I unmanned aircraft, according to some estimates.¹ In a 2014 analysis by 38 North, a U.S. research center, this fleet is likely comprised of seven different models: variants of the U.S. MQM-107D Streaker, the Russian Pchela-1T and DR-3, Chinese Sky-09Ps, the Panghyon I and II, and an unidentified drone.² It’s difficult to know how many of these systems—some of which date to the Cold War—remain operational. The following table is based on images of North Korean drones that the DPRK has displayed at military parades or that have crashed in South Korea.

Model	Make	Origin	Class	Intro	Qty	Operator	Notes
Sky-09P ³	Taiyuan	China	I				
ASN-104	Xi’an ASN Technology Group	China	I				“Panghyon-1” “Panghyon-2”
UV-10CAM	Microfly	China	I				

OPERATIONS

- Between 2013 and 2017, North Korean drones conducted numerous surveillance flights inside South Korean airspace. In early 2014 South Korean authorities recovered the remains of what appeared to be North Korean variants of the Chinese Sky-09P and UV-10CAM UAVs in Samcheok, South Korea.⁴ In 2015 and 2016, South Korea detected several more North Korean drone incursions.⁵ A crashed UV-10CAM was discovered on a mountainside near Inje in 2017.⁶ Several of the drones that crashed in South Korea over the years were found to have captured images of a number of sensitive sites, including the South Korean presidential residence, several military installations, and the U.S.-operated Terminal High Altitude Area Defense missile system. South Korea announced in 2017 that it had developed a radar system designed specifically to detect intruding drones.⁷

Searcher	Israel Aerospace Industries	Israel	II	1994-2017		Air Force	

PERSONNEL

AIR FORCE

- Activated in 2007, the Republic of Singapore Air Force UAV Command manages the service's drone operations.⁷ The Command is comprised of the UAV Group, Image Exploitation Group, 1st Air Engineering and Logistics Group, and the Operations Development Group.⁸ The UAV Group, which is responsible for piloting the Air Force's drones, is comprised of the UAV Command's three operational squadrons: the 116th, 119th, and 128th. The Imagery Exploitation Group is comprised of the 129th Squadron and 138th Squadron. The 1st Air Engineering and Logistics Group is comprised of the 801st Squadron and 811th Squadron. The Operations Development Group serves as the Command's headquarters and is responsible for ensuring that the Command meets the Air Force's intelligence requirements.

Name	HQ	Type	Equipment	Activated
116th Squadron, UAV Group, UAV Command	Camp Murai, Tengah Air Base	D	Hermes 450	2007
119th Squadron, UAV Group, UAV Command	Camp Murai, Tengah Air Base	D	Heron 1	1998
128th Squadron, UAV Group, UAV Command ⁹	Camp Murai, Tengah Air Base	D	Heron 1	1988

Between 1978 and 1988, the 128 Squadron, which was then known as the Field Photo Unit, was attached to the Singapore Army. It transferred from the Army to the Air Force and was redesignated the 128th Sqn in 1988, at which point it took command responsibility for Singapore's fleet of newly acquired Scouts. The Squadron began flying the Searcher in 1994, which replaced the Scout in 1998. In 2012, the 128 began flying the Heron 1, which achieved full operational capability in 2017.

TRAINING

- The RSAF stood up the UAV Training School (UTS) in July 1998.^{10,11} UTS is subordinated to the Air Force Training Command's Flying Training Institute. Cadets are trained on both simulators and live aircraft.

- Singapore regularly deploys drones overseas to participate in multinational training exercises. In 2015 an RSAF Heron 1 with the 119th Squadron participated in Exercise Forging Sabre in Arizona. In 2017 three RSAF Heron 1s participated in Exercise Cope Tiger alongside forces from Thailand and the United States.¹² On multiple occasions, the Heron 1s have participated in Australia's Exercise Wallaby, an annual bilateral exercise held at the Shoalwater Bay Training Area.¹³

OPERATIONS	Country	Base	Equipment	Period	Operation
	Afghanistan	Tarin Kowt	Searcher	2010	Blue Ridge
Between August and November 2010, Singapore deployed the UAV Task Group (UTG), a group of 52 personnel, mostly from the 128th Squadron, equipped with IAI Searchers, to Tarin Kowt in Uruzgan province. ¹⁴ The UTG provided ISR for Operation Blue Ridge, Singapore's contribution to the International Security Assistance Force.

*Estimate

ACTIVE ACQUISITIONS

- In a September 2018 speech, the commander of the Korean Marine Corps said that the service was looking into acquiring a tilt-rotor VTOL system.⁸

PERSONNEL

ARMY

- The RoK Army activated the Air Patrol Companies (공중정찰중대는) in the early 2000s to operate the RQ-101 Falcon and the Searcher for corps-level intelligence, surveillance, and reconnaissance. In 2018 the RoK Army embarked on a review of the future of its corps-level drone reconnaissance programs, stating that Class II systems that have been acquired to date may eventually be used for training purposes.⁹ That same year, the RoK activated the DroneBot Warrior Unit, an experimental unit that will develop new operational concepts that could be the basis for a wider re-thinking of the Army’s drone programs and units.

Name		HQ	Type	Equipment	Activated
“DroneBot Warrior” Unit	드론봇 전투단	Yongin, Gyeonggi Province	D	XeFI and other Class I UAVs	2018
The DroneBot Warrior Unit was announced in 2017 and activated in 2018. ¹⁰ It is tasked with experimenting with new capabilities such as drone swarms and manned-unmanned teaming. As of late 2018, the unit consisted of 85 personnel; it is expected to eventually grow to a battalion with some staffing by civilian experts. ¹¹					
Air Patrol Company, 142nd Intelligence Battalion, 2nd Corps ¹²	2군단 142정보대대 공중정찰중대	G 419	D	RQ-101, RQ-102	2001
Air Patrol Company, 143rd Intelligence Battalion, 3rd Corps ¹³	3군단 143정보대대 공중정찰중대는	G 404	D	RQ-101, RQ-102	2003
Air Patrol Company, 145th Intelligence Battalion, 5th Corps ¹⁴	5군단 145정보대대 공중정찰중대는	G 202	D	Searcher	
Air Patrol Company, 148th Intelligence Battalion, 8th Corps ¹⁵	8군단 148정보대대 공중정찰중대에	Gangwon Province	D	RQ-101, RQ-102	2004

AIR FORCE

Name		HQ	Type	Equipment	Activated
Air Intelligence Unit, Air Force Operations Command ¹⁷	공군작전사령부 공군항공정보단	Osan Air Base	D	RQ-4 Global Hawk	2017

The Air Intelligence Unit was created in December 2017 to serve as South Korea's dedicated medium and high-altitude intelligence squadron. The squadron will be responsible for operating RQ-4 Global Hawks and any future Class III systems acquired by the Air Force.

TRAINING

- The RoK Army has established at least nine Drone Training Centers around the country. The first Drone Training Center (드론교육원) was established at the Army Intelligence School (육군정보학교) in May 2017 to provide instruction on the operation and maintenance of unmanned aircraft.¹⁸ The Army established a second Drone Training Center in Chungnam Province in 2018.¹⁹ In July 2019 the Army announced that it had established seven more regional Drone Training Schools with the Maritime Defense Command, Special Forces Command, 2nd Corps, 5th Corps, 31st Division, 36th Division, and the Infantry School.^{20,21} The Army said that it intends to open another nine centers in 2020. The training program appears to focus on using Class I UAVs, particularly multi-rotor drones. The Army intends to be able to train 1,000 drone operators per year by 2021. Together with the DroneBot Warrior Unit, the Drone Training Centers initiative is designed to prepare the RoK Army for future combat scenarios in which small drones are a ubiquitous presence on the battlefield.

OPERATIONS

Country	Base	Equipment	Period	Operation
Afghanistan		RemoEye-006	2010-2014	

The Korean Army deployed to Afghanistan between 2010 and 2014 to provide a protective detail for Korea's Provincial Reconstruction Team, a civilian humanitarian mission.^{22,23} The Army's "Ashena Unit" was equipped with the Remoeye-006 for force protection.

DOMESTIC OPERATIONS

- According to a 2016 analysis by Captain Sukjoon Yoon, the RoK military views unmanned systems as an important capability for identifying and monitoring North Korean military activities such as the deployment of long-range artillery and the development of nuclear facilities.²⁴
- The Ministry of National Defense announced in July 2019 that it would begin deploying the Camcopter S-100 and the RQ-101 Falcon for maritime patrols after the ROK military failed to detect a North Korean boat.²⁵

DEVELOPMENT

- The KUS-FS is a Class III MALE UAV designed and built by Korean Aerospace Industries. The project has its origins in the early 2000s, when the Korean Agency for Defense Development launched a study of MALE UAV concepts.²⁶ Following this study, the Defense Acquisition Program Administration selected KAI to lead a project to develop a drone with specifications equivalent to the U.S. MQ-1 Predator in 2008. The KUS-FS completed its first flight in 2012. After a hiatus, flight tests resumed in 2017.²⁷
- The TR-60 is a Class II tilt-rotor VTOL UAV developed by the Korea Aerospace Research Institute. In 2011, KARI unveiled the TR-60 in a demonstration flight at the Goehung Flight Performance Test Site.²⁸ In mid-2017, the TR-60 completed a successful test flight on a Korea Coast Guard vessel.²⁹
- The KUS-VT is a Class II tilt-rotor VTOL UAV developed by Korean Aerospace Industries. A model of the KUS-VT was displayed at the 2017 Seoul Aerospace and Defense Exhibition.³⁰
- The Night Intruder-600VT (NI-600VT) is a Class III rotary-wing UAV developed by Korean Aerospace Industries. Work on the NI-600VT began in 2017. It was unveiled in April 2018 and, as of June 2019, is currently undergoing flight tests.^{31,32} The airframe is based on that of a manned helicopter. It is approximately 9-meters-long and has a reported MTOW of 600 kilograms.

ARMY

Name	HQ	Type	Equipment	Activated
15th Unmanned Aerial Vehicle Regiment, Army Artillery ^{5,6}	Army Camp Balalla	D	Phantom 4	2016

OPERATIONS

- The Sri Lanka Air Force deployed drones extensively over the course of the 26-year civil war against the Liberation Tigers of Tamil Eelam. Air Force Searcher Mk II, Blue Horizon II, and Scout drones were used to conduct surveillance and reconnaissance, target acquisition, and battlefield damage assessment.⁷ The primary unit responsible for operations was the 11th Squadron based at Vavuniya. Several drones were lost to LTTE anti-aircraft fire.

ACTIVE ACQUISITIONS

- The Ministry of National Defense (MND) unveiled a plan in September 2018 to establish an Air Force Reconnaissance Squadron equipped with long-range strike-capable drones.³ According to the MND, the drones would be used to improve combat efficiency and precision-strike capabilities in Taiwan’s littoral regions. The MND is reportedly considering the NCIST Tengyun to fill this requirement, although a decision has yet to be made as of this writing.⁴
- The Army is reportedly considering acquiring a Class I rotary-wing drone. According to an April 2019 media report, the Army has a requirement for 112 systems, or 224 aircraft.⁵ The UAV must have an endurance of at least 60 minutes and operational range of 20 kilometers.

DEVELOPMENT

- The Teng Yun (騰雲) is a Class III fixed-wing system developed by the National Chung-shan Institute of Science and Technology (NCSIST or CIST). The Teng Yun project was launched in 2009 and the prototype aircraft was unveiled at the 2015 Taipei International Aerospace and Defense Industry Exhibition.⁸ The Teng Yun conducted flight tests in Taitung County in southeast Taiwan in April 2018.⁹
- The Jian Xiang (劍翔) is a Class I anti-radiation loitering munition developed by NCSIST. It was unveiled at the 2017 Taipei Aerospace and Defense Technology Exhibition.¹⁰ It bears a physical resemblance to the IAI Harpy/Harop. According to a June 2019 media report, the Taiwanese Air Force Air Defense and Missile Command intends to spend approximately \$2.64 billion on developing and acquiring a fleet of anti-radiation vehicles.¹¹

DEVELOPMENT

- The D-Eyes Mk I is a fixed-wing Class I UAV developed by the Defense Technology Institute (DTI). Initially developed for the Royal Thai Air Force, the D-Eyes may also eventually go into service with the army, navy, and marines. In early April 2019, the Ministry of Defense conducted an evaluation of the system at Photaram Airport.

ACTIVE ACQUISITIONS

- In June 2018, the French journal Intelligence Online reported that two firms, Israel Aerospace Industries and Aeronautics, were competing for a Vietnamese tender for Class III unmanned aircraft.⁵ According to a report in December 2018, Vietnam approved the acquisition of three IAI Herons in a deal worth approximately \$160 million.⁶ This deal has yet to be confirmed by either Israel or Vietnam.
- The Vietnamese Border Defense Force (Bộ đội Biên phòng Việt Nam or BPSP) may have acquired a Class I drone that closely resembles the U.S. AeroVironment Raven. The UAV was displayed at a January 2019 event attended by BPSP command. A March 2019 report in a Vietnamese media outlet speculated that the drone may have been produced domestically.⁷

OPERATIONS

- Armenia has deployed drones in the ongoing Nagorno-Karabakh territorial conflict between the Artsakh Defense Army—Armenian-backed separatists—and Azerbaijan. Azerbaijan has repeatedly claimed to have shot down Armenian drones, although it has not always been clear whether these were drones operated by Armenian forces or by the separatists.⁴ In January 2015 the Azerbaijani Ministry of Defense announced that it had downed an Armenian UAV. In April 2018 Azerbaijan announced that it had downed a DJI Mavic belonging to Armenian forces.⁵ In June 2018 Azerbaijan announced that it had downed what appeared to be an X-55 (Ptero-5E).⁶

* Licensed for production by Azad Systems.

PERSONNEL

- The Azerbaijan Ministry of Defense opened a new facility for training Air Force UAV operators in June 2017.⁹ The facility is operated by the Air Force Training Command and is equipped with simulators. The official announcement of the new facility did not mention where specifically it is located, but the base appears to be Baku Lokbatan Airport, an airfield west of the capital that was refurbished in 2016 and 2017 to accommodate UAV operations.¹⁰
- In December 2018 the Azerbaijan Ministry of Defense opened a new facility to train UAV specialists in the Azerbaijan Army.¹¹ It consists of a single building with classrooms and an aircraft hangar. It is equipped with flight simulators and multiple UAVs, including the Aerostar, Orbiter 1, and Orbiter 3. The official announcement of the new facility did not disclose its location, but official photographs released by the MoD match satellite images of Salyany Air Base.¹²

OPERATIONS

- Azerbaijan has deployed drones to support security operations in Nagorno-Karabakh. In 2016 Azerbaijan reportedly used an Israeli-made Harop loitering munition to target a bus carrying a group of Arme-

nian volunteer fighters, according to Armenia's Defense Ministry.¹³ In 2018 Israeli law enforcement officials indicted Aeronautics for allegedly targeting Armenian separatists with a loitering munition at the request of Azeri military officials during a live product demonstration.¹⁴

- In June 2018 the press secretary for the Artsakh Defense Army (Armenian-backed separatists) claimed that the Artsakh forces had downed 22 UAVs belonging to Azerbaijan since 2011 and had lost 3 UAVs over the same period.¹⁵ The Azeri Ministry of Defense has claimed to have downed 25 Armenian drones, most of which were consumer drones made by DJI.¹⁶

PERSONNEL

- The 927th Unmanned Aircraft Systems Training and Applications Center (927-м центре подготовки и применения беспилотных авиационных комплексов Вооруженных Сил Республики Беларусь) was established in 2010 at Bereza Air Base.⁴ It serves as both a training academy and a test site for Belarussian UAV manufacturers.
- The Belarussian State Aviation Academy (Белорусскую государственную академию авиации), formerly the Minsk Aviation Technical School of Civil Aviation (Минского авиационного технического училища гражданской авиации), established the Department of Unmanned Systems and Combat Control (кафедра беспилотных авиационных комплексов и боевого управления) in 2011.⁵ It provides two, four-year courses of instruction for aspiring active duty officers and several courses for reserve officers. Graduates are awarded the rank of lieutenant and go on to serve in the Armed Forces as either UAV operators, sensor operators, or maintenance technicians.

DEVELOPMENT

- The Belar YS-Ex is a domestically-produced variant of the Yabhon Flash-20, a Class III UAV developed by the UAE's Adcom Systems. Produced by Belarus' Indela Systems, it was unveiled at the MILEX 2017 defense trade show.⁶ It is not believed to be in active service.
- The Yastreb (Ястреб) is a Class III UAV developed by the Research and Manufacturing Center of Multipurpose Unmanned Aerial Systems (NPT MBK), a division of the Belarussian Academy of Sciences. It was unveiled at the Army-2018 defense trade show.⁷ According to the manufacturer, it has a maximum take-off weight of 700 kilograms and can be equipped with multiple loitering munitions for aerial strikes, each of which are fitted with a 10 kilogram shaped-charge warhead.⁷

OPERATIONS

- In April 2008, several months before the start of the 2008 Georgian War, a Russian fighter jet shot down a Georgian Air Force Hermes 450 drone over the disputed Abkhazia territory.⁴ While Russia denied involvement, a United Nations investigation confirmed that Russia was indeed responsible, citing a video

of the incident taken from the drone's cameras. The incident—one of the few air-to-air engagements to date involving drones and fighter aircraft—contributed to a rise in tensions between the two countries.

PERSONNEL

- According to figures released by the Ministry of Defense in January 2019, the Russian military had activated 40 UAV units (подразделения БПЛА) and acquired over 2,100 UAVs since 2012.¹⁰ However, the MoD has not disclosed a complete list of these units. The following partial list is based largely on Russian Ministry of Defense statements, which were cross-checked with the online database known as *Milkavkaz*. It represents the extent of publicly disclosed information on Russian drone units, but it contains significant gaps, particularly in the Aerospace Forces and Airborne.¹¹

ARMY

- Most of the UAV units in the Russian Ground Forces appear to be company-sized formations (Рота БПЛА) equipped with various Class I tactical systems. They are generally attached as organic support elements to Motor Rifle Brigades, the Ground Forces' primary combined arms formation. Within a typical Motor Rifle Brigade, the UAV Company may be called upon to provide aerial surveillance or reconnaissance for any of the combat elements of the brigade. According to Dr. Lester Grau and Chuck Bartles at the U.S. Army's Foreign Military Studies Office, each UAV Company is organized into platoons that each operate different UAVs.^{12,13} For example, a “mini-platoon” is equipped with the hand-launched Granat-1 while a “short-range” platoon is equipped with the heavier catapult-launched Orlan-10 or Granat-3SV.
- Other Russian Ground Forces formations also appear to contain UAV elements of varying sizes. Several formations, such as the 16th Special Purpose Brigade in the Eastern Military District, incorporate UAV units that are probably smaller than a full UAV Company. Another group, the 201st Military Base in Tajikistan, has activated an Unmanned Aviation Battalion (Батальон беспилотной авиации) that includes a unit equipped with the Searcher Mk II.¹⁴

--	---	--------------------------------	---	----------

NAVY

- The Russian Navy has activated one UAV regiment (полк БПЛА) with the Northern Fleet and one UAV squadron (эскадрилья БПЛА) with the Black Sea Fleet. It also appears to be in the process of standing up UAV units with the Baltic Fleet and Pacific Fleet.^{33,34} In March 2018 the Baltic Fleet conducted an exercise in which a Searcher Mk II corrected naval artillery fire.³⁵
- Russian reports on the Pacific Fleet's UAV activities are somewhat contradictory. In 2014 media outlets reported that the Pacific Fleet had activated a UAV regiment equipped with the Searcher Mk II.³⁶ More recent reports, such as a December 2017 MoD article and a January 2019 media report in Izvestia, claim that the Northern Fleet is the only fleet with a UAV regiment.^{37,38} Yet, satellite images of Petropavlovsk-Kamchatsky Airport, the Pacific Fleet Air Wing's main air base, appear to show that ground control stations for the Searcher Mk II were placed at the base some time in late 2017 or early 2018.³⁹ And in June 2019, reports in Russia media outlets said that Searcher UAVs with Pacific Fleet Naval Aviation (*Военно-воздушные силы Тихоокеанского флота*) had been deployed to monitor forest fires on the Kamchatka Peninsula.⁴⁰ It is very likely that the Pacific Fleet is equipped with Searchers, although it is not clear whether these aircraft constitute a unique UAV unit. In December 2018 the Navy announced that Steregushchiy-class corvettes with the Pacific Fleet would receive several Orlan-10s.⁴¹

TRAINING

- The 924th State Center for Unmanned Aviation of the Russian Federation Ministry of Defense (*924 Государственного центр беспилотной авиации Министерства обороны Российской Федерации*) was activated in 2014 as an inter-service theoretical and technical training academy for drone pilots, sensor operators, and technicians.⁴³ It is currently located southeast of Moscow in Kolomna. Practical training on the Searcher likely takes place at the nearby Stupino Air Base. Established in 1983 to provide instruction on ground-based cruise missiles, the Center merged with the 215th UAV Base in 2011, and was re-named the 924th Multiservice Center for Unmanned Aerial Vehicles in 2013. In December 2014 it was renamed again, as the 924th State Center for Unmanned Aviation of the Russian Federation Ministry of Defense.

- The Russian Air Force also conducts officer training at the 4th Faculty of Unmanned Aviation at the Chelyabinsk Higher Military Aviation School of Navigators (*4 ФАКУЛЬТЕТ беспилотной авиации, Челябинское высшее военное авиационное училище штурманов*), part of the Zhukovsky-Gagarin Air Force Academy. In October 2018, 4th Faculty graduated its first class of operators, who completed a five-year course of study that included stints at the 924 Center.⁴⁴ Officers who graduate from the 4th Faculty lead unmanned aircraft units in the Air Force, Navy, and Army.
- Unmanned aircraft have featured prominently in Russian Army training operations and military exercises, particularly in the Southern Military District, where some of the Army's oldest drone units are located. In November 2018, the Russian Ministry of Defense reported that a single company at a military base in Armenia (likely the 102nd Military Base) had accumulated more than 5,000 flight hours in training operations at the Kamkhud and Alagyaz ranges that year, a 20 percent increase over 2017.⁴⁵ In 2016, Russian drones were deployed in the INDRA-2016 military exercise with India.⁴⁶ At the annual Army International Games (ARMI) in 2017, teams from Russia, Kazakhstan, and Iran competed in a range of mock drone operations such as nighttime aerial reconnaissance and artillery fire correction.⁴⁷ A team from Belarus joined ARMI in 2018.

OPERATIONS

Country	Base	Equipment	Period	Operation
Georgia		Pchela-1T	2008	Mole Cricket 19
Russia briefly deployed the Pchela-1T in the 2008 Russo-Georgian War. ⁴⁸ In <i>The Russian Military and the Georgia War: Lessons and Implications</i> , Ariel Cohen and Robert E. Hamilton write that Russian military commanders during the war declared the system virtually inoperable due to its noisiness, degraded image quality, and low flight ceiling. ⁴⁹				
Ukraine	Taganrog Air Base	Searcher Mk II, Orlan-10, Eleron-3, (Other)	2014-	Accountability
Drones have featured prominently in Russian operations in eastern Ukraine in support of Ukrainian separatists. Though Russia has not officially acknowledged its participation in the conflict, at least nine different types of Russian-made UAVs have been identified operating in the region since the start of hostilities. ⁵⁰ The Ukrainian government has reported that Russian military UAV specialists deployed to the area in 2018 to evaluate the effectiveness of these systems in combat. ⁵¹ The conflict has provided a testing ground for Russia to explore new operational concepts involving drones such as the Leer-3 electronic warfare system, which consists of three Orlan-10s and a KamAZ-5350 truck that serves as a command and control hub. ⁵² At least two Russian Searcher Mk IIs and a dozen Orlan-10s have been downed in eastern Ukraine since 2014. According to a March 2019 presentation by a Ukrainian military official, Ukrainian forces catalogued 641 cases in which Russian and Russian-backed forces in eastern Ukraine used UAVs in 2017 and 250 cases in 2018. ⁵³				
Syria	Khmeimim Air Base	Searcher Mk II, Orlan-10, Eleron-3, (Other)	2015-	Grapes of Wrath
Russia deployed drones to the Syrian Civil War in 2015. Initially deployed around Khmeimim Air Base, a Russian military headquarters in Latakia province, Russian Searcher Mk IIs have been spotted at Aleppo International Airport in 2016, Deir ez-Zor Airport in 2017, and T-4 Air Base in 2019. ^{54,55,56} Russia has used the Leer-3 electronic warfare system to interfere with enemy communications, including their ability to send messages to mobile phones. ^{57,58} According to the MoD, Russian UAVs had conducted 23,000 sorties, totaling more than 140,000 flight hours since the beginning of the Syrian conflict as of July 2018. ⁵⁹

DEVELOPMENT

- The Orion (*Орион*) is a Class III fixed-wing UAV developed by the Kronshtadt Group, a subsidiary of Joint-Stock Financial Corporation Sistema, under a contract awarded by the Ministry of Defense in 2011. The Orion was first publicly displayed at the 2017 MAKS arms fair. In August 2018 the director of Russia's arms export bureau said that an unnamed country in the Middle East had already placed an order for the Orion-E, an export variant of the system.⁶⁰ In September 2018 Kronshtadt showcased a strike-capable variant of the Orion.⁶¹ According to a September 2018 media report, Kronshtadt is exploring the possibility of developing a high-altitude long-endurance variant of the Orion called the Orion-2.⁶²
- The Altair (*Альтаир*) is a twin-engine Class III fixed-wing UAV. The Simonov Design Bureau (SDB) began work on the Altair in 2011 with the goal of developing a high-altitude drone for arctic surveillance missions. The Altair's first flight tests took place in 2016. In October 2018 the Ministry of Defense pulled the project from SDB, noting the company's lack of progress in overcoming technical challenges in key areas such as sensors and microprocessors.⁶³ In December 2018 Deputy Defense Minister Alexei Krivoruchko said in an interview that work on the Altair would continue at the Ural Civil Aviation Plant.⁶⁴
- The Okhotnik (*Охотник*) is a Class III fixed-wing UAV developed by Sukhoi. The Okhotnik is reportedly designed to serve as a combat drone capable of reaching a top speed of 1,000 kilometers per hour. Photos of the drone, showing the aircraft taxiing on a runway, were first published online in January 2019.⁶⁵ The Okhotnik conducted its maiden flight in August 2019, lasting around 20 minutes.⁶⁶ A satellite image from early 2019 showed that a demonstrator aircraft has been based at Akhtubinsk Air Base, potentially for flight tests.⁶⁷ Sukhoi has reportedly manufactured several demonstrator aircraft as of this writing.
- The Forpost-M (*Форпост-М*) is a variant of Searcher Mk II developed by the Ural Civil Aviation Plant (UZGA). The project was announced at the Army-2015 arms fair.⁶⁸ Built from Russian components, it is expected to have improved communications compared to the Searcher, a new radar system, and strike capability.⁶⁹ In July 2018 the Ministry of Defense reported that the Forpost-M was undergoing tests and could enter service in 2019.⁷⁰
- The Corsair (*Корсар*) is a Class II fixed-wing UAV developed by OKB Luch. It was unveiled at the 9 May 2018 Victory Day parade in Moscow.⁷¹ The project reportedly began in 2009, with the aircraft's first flight taking place in 2015. The Corsair is a twin-boom aircraft with a push-propeller design. According to a March 2019 media report, Corsair production has been delayed due to a legal dispute between OKB Luch and Itlan Engineering Center, a company contracted to provide engines for the Corsair.⁷² Nevertheless, Russian officials have signalled their intention to purchase the Corsair.
- The Katran (*Катран*) is a Class II rotary-wing UAV developed by Russian Helicopter Group. It was unveiled at the 2018 Victory Day parade in Moscow.⁷³ The Katran is notable for its coaxial rotor layout. It is expected to replace the Schiebel Camcopter S-100, which the Navy acquired in limited numbers in 2011 for trials. The Katran reportedly began flight trials in 2018.⁷⁴
- The Carnivora (*Карнивоора*) is a Class I fixed-wing UAV developed by NPP Mikran. A mockup was displayed at the 2017 "Robotization of the Armed Forces" conference and an upgraded version was announced in a video released in December 2018.⁷⁵ It is designed for both strike and counter-UAV missions and is advertised as capable of operating in denied environments.

UKRAINE

INVENTORY

- Several reports have indicated that the number of unmanned aircraft in the Ukrainian military is rising sharply. In its official annual review of military procurement, the Ukrainian Air Force reported purchasing 75 systems (each of which likely include multiple aircraft) in 2018, roughly double the 35 systems the Air Force purchased in 2017.¹ In January 2018, Ukrainian journalist Yuri Butusov, editor of the online website Censor.net, reported that the Armed Forces General Staff had set a goal of purchasing a minimum of 500 unmanned aircraft systems over the next few years, although this figure has not been officially confirmed.²
- The Donbass War has prompted a boom in the development of domestic drones.³ In addition to several imported systems, at least three Ukrainian systems—the Athlone Air A1-M Fury, Spaitech Sparrow, and DeViro Leleka-1000—were in active use as of this writing. Several other Ukrainian UAVs such as the Observer-S, Raybird-1, and ASU-1 Valkyrie have been cleared for use in the military, though they do not appear to have been purchased in large numbers. The State Scientific Testing Center in Chernihiv (*Державному науково-випробувальному центрі Збройних Сил України*) is responsible for testing and approving new systems.
- In addition to state-level acquisition efforts, Ukraine’s volunteer battalions have developed and acquired an array of hobbyist and military-grade drones. At least some of these acquisitions were subsidized by private fundraising drives. The demand for modern drones led to the creation of companies like Matrix UAV, which was formed to deliver drones to the volunteer battalions in the wake of the Russian incursion. Matrix UAV has developed experimental fixed-wing and multirotor surveillance and reconnaissance drones, including a quadrotor UAV armed with a grenade launcher.⁴

PERSONNEL

AIR FORCE

Name	HQ	Type	Equipment	Activated
383rd Unmanned Aerial Vehicle Regiment (Unit A3808)	383-й окремії полк дистанційно-керованих літальних апаратів (в/ч А3808) Khmelnyskyi	D	Bayraktar-TB2	1987

The 383rd was equipped with Soviet-era Tu-141 and Tu-143s, which were last deployed in 2014 and 2015 to eastern Ukraine.¹⁸ Two members of the 383rd were killed in February 2015 in fighting around Donetsk Airport.¹⁹ The 383rd will reportedly begin operating the Bayraktar-TB2, which Ukraine acquired in late March 2019.²⁰

PARAMILITARY

Name	HQ	Type	Equipment	Activated
Aerorozvidka	Аеророзвідка	D	Multiple small UAVs	2014

The Aerorozvidka is a volunteer battalion that formed after the Russian incursion into eastern Ukraine. It is tasked with providing aerial intelligence to Ukrainian forces.²¹ In 2016 Minister of Defense Stepan Poltorak recognized the Aerorozvidka unit for its service in the ongoing conflict.²²

OPERATIONS

- The Ukrainian military and pro-government paramilitary forces have fielded a mix of Class I consumer drones, indigenous military systems, and foreign-made systems for reconnaissance, artillery spotting, and battle damage assessment in the conflict in eastern Ukraine.²³ Ukrainian drones have been extensively targeted by counter-UAV systems. In 2016 Ukraine found that Russian electronic warfare systems were able to easily jam and intercept its U.S.-supplied RQ-11 Ravens.²⁴

INFRASTRUCTURE

Name	Country	Latitude	Longitude	Affiliation	Activity	Notes
Chernihiv Air Base	Ukraine	51°33'0"N	031°19'0"E		Test site	

DEVELOPMENT

- The Horlytsya (*Горлиця*) is a Class II UAV developed by Antonov State Company. It was unveiled in 2017, when Antonov revealed it had conducted its first flight.²⁵ It is the first strike-capable drone produced in Ukraine. According to the manufacturer, the Horlytsya has an endurance of 8 hours.
- Antonov is believed to be developing a strike-capable high-altitude long-endurance UAV with the help of an unnamed foreign country. The company displayed a model of the drone at the Arms and Security expo in Kyiv in October 2018.²⁶ The aircraft will reportedly have a 25-meter wingspan and 13-meter length. Ukraine announced in June 2019 that the Antonov and the United Arab Emirates were exploring the possibility of cooperating on the development of UAVs.²⁷

RQ-5 Hunter-B ¹	IAI	Israel	III	2001	18	Air Force	Active fleet of 11 aircraft due to losses
RQ-11 Raven ^{2,3}	AeroVironment	USA	I	2017	27 (8)	Army	

ACTIVE ACQUISITIONS

- In its “Strategic Vision 2030” planning document, which was released in 2016, the Belgian Ministry of Defense announced that it would invest 490 million euros to acquire medium-altitude long-endurance drones to replace the RQ-5 Hunter B.⁴ In 2018 the MoD began negotiations with the U.S. to purchase the GA-ASI MQ-9B SkyGuardian, a variant of the MQ-9 Reaper, to fill this requirement.⁵ The U.S. State Department approved the sale of four MQ-9B SkyGuardians to Belgium in March 2019.⁶
- According to “Strategic Vision 2030,” the MoD intends to invest 18 million euros in tactical drones and 9 million euros in mini drones between 2021 and 2024.⁷
- In June 2018 the Belgian Navy launched the Maritime Tactical UAS Project (MTUAS) to explore different ship-board reconnaissance platforms.⁸ Under this program, it has conducted a series of flight tests with the domestically produced Schiebel Camcopter S-100, a rotary-wing drone.

PERSONNEL**AIR FORCE**

Name	HQ	Type	Equipment	Activated
80th UAV Squadron ⁹	80ème Escadrille UAV Florennes Air Base	D	RQ-5 Hunter	2004

The 80th Sqn is comprised of three groups totaling 120 soldiers. It was previously subordinated to the Belgian Land Component (army) as the 80th Surveillance and Observation Battery and equipped with the Épervier. The Army retired the Épervier and deactivated the 80th in 1999.¹⁰ Five years later, the unit was reactivated as the 80th UAV Squadron and transferred from the Land Component to the Air Component. Upon reactivation it was equipped with the RQ-5 Hunter. In 2011 the 80th moved its headquarters from Elsenborn-Butgenbach Air Base to Florennes Air Base. The 80th regularly conducts readiness training exercises during the winter months at Beja Air Base in Portugal.

Name	HQ	Type	Equipment	Activated
Cavalry Reconnaissance Battalion (ISTAR Battalion), Motorized Brigade Headquarters ¹¹	<i>Bataillon de Chasseurs à Cheval (Bataillon ISTAR), Le Quartier Général de la Brigade Motorisée</i>	ND	RQ-11 Raven	2017

The Army stood up the ISTAR Battalion in 2011. It was equipped with the RQ-11 Raven in 2017.

OPERATIONS

Country	Base	Equipment	Period	Operation
Democratic Republic of Congo ¹²	Kinshasa	RQ-5 Hunter	2006	EUFOR RD Congo
In 2006, Belgium deployed the 80th UAV Sqn with the European Forces (EUFOR) Congo peacekeeping force. One Belgian RQ-5 Hunter was shot down during the mission, injuring six civilians on the ground.				
Bosnia-Herzegovina ¹³	Tuzla	RQ-5 Hunter	2005	Althea
Afghanistan ¹⁴	Camp Marmal	RQ-11 Raven	2018-	Resolute Support
A detachment from the Cavalry Reconnaissance Battalion (ISTAR Battalion), equipped with the RQ-11 Raven, deployed in April 2018 to Camp Marmal, Afghanistan to participate in Operation Resolute Support. The detachment is responsible for training Afghan security forces.				

DOMESTIC OPERATIONS

- For several months each year, the 80th relocates to Koksijde Air Base to conduct environmental monitoring patrols in the North Sea.¹⁵ This operation began in 2007 and is conducted in conjunction with the Maritime Information Bureau (*Carrefour d'Information Maritime*).
- The 80th deployed to Brasschaat Air Base for Vigilant Guardian, a 2016 counter-terrorism operation launched in the wake of the 2015 Paris terrorist attacks.¹⁶
- In 2017 the Ministry of Defense agreed to permit the 80th Sqn to deploy to Brasschaat Air Base to conduct border security and customs enforcement operations.¹⁷

Name	HQ	Type	Equipment	Activated
Intelligence Operations Center ³	<i>Središnjica za obavještajno djelovanje</i> Pula Airfield	ND	Skylark	2015

Prior to 2015, the Croatian Armed Forces' Aerial Intelligence Company, Military Intelligence Battalion (*Satnije za obavještajnu potporu iz zraka, Vojnoobavještajne bojne*, or SOPiZ VOb) was responsible for drone operations.³ Following the implementation of the Croatian Armed Forces Long-Term Development Plan 2015-2024, the Ministry of Defense is believed to have shifted responsibility for UAVs to the newly created Intelligence Operations Center, a sub-staff unit of the Croatian Armed Forces General Staff. In September 2018 the MoD announced that it intends to turn the Pula Airport on the Istrian peninsula into a Center for Unmanned Aircraft Systems.^{4,5} The MoD intends to base 150 personnel from various support units at the airfield's military wing, which had been inactive since 2012.

OPERATIONS

- In August 2018, the Ministry of Defense deployed an Army Skylark team for firefighting operations in Zadar, Šibenik-Knin, and Split-Dalmatia counties.⁶ The drones were tasked with early fire detection and targeting for manned firefighting aircraft. It was Croatia's first use of military drones for firefighting.

Unmanned Reconnaissance Company, 102nd Reconnaissance Battalion, 53rd Regiment of Reconnaissance and Electronic Warfare, Combat Support Forces, Land Forces Command ⁹	<i>Rota bezpilotních průzkumných prostředků, 102. průzkumného praporu, 53. pluk průzkumu a elektronického boje</i> Prostějov	D	RQ-11B Raven, ScanEagle	2003

Originally known as the 116th UAV Sqn, it was redesignated the Unmanned Reconnaissance Company in 2000 and subordinated to the 102nd Btn after the latter stood up in 2003.¹⁰ It is comprised of one group equipped with the ScanEagle and four squads equipped with the RQ-11B Raven.¹¹

OPERATIONS

Country	Base	Equipment	Period	Operation
Afghanistan	Bagram Air Base	RQ-11 Raven, ScanEagle	2005-	

The 102nd Reconnaissance Battalion first deployed to Afghanistan in 2005, though it's not clear whether these troops were equipped with drones at the time.¹² Beginning in 2010, multiple Czech rotations to PRT Logar in northern Afghanistan included 102nd Btn troops equipped with the RQ-11 Raven. In 2015 the 102nd's ScanEagle group deployed with the ACR Guard Company to provide security assistance for Bagram Air Base. The ScanEagles were acquired with U.S. counterterrorism aid, specifically for base protection and surveillance missions in Afghanistan.¹³ As of December 2018, the Czech ScanEagles had accumulated nearly 3,000 flight hours in Afghanistan.¹⁴

PERSONNEL

ARMY

- The Finnish Army has an unknown number of UAS Squads (*minilennokkiryhmä*) equipped with the Israeli Aeronautics Orbiter-2.⁵ These squads are integrated into all eight of its brigade-level formations. Each UAS squad is comprised of nine personnel and is equipped with one or two systems (four or eight aircraft).
- According to media reports in December 2018, the Finnish Defense Forces contacted drone hobbyists to gauge their interest in joining a cadre of reservists that specialized in flying quadcopter drones.⁶ However, the Defense Forces said that it was only seeking information on drone operators and that there were no plans to create a “quadcopter corps” (*nelikopterijoukkoja*).

ACTIVE ACQUISITIONS

- The SDAM (*Système de Drones Aérien de la Marine*) program seeks to develop a shipboard tactical unmanned rotorcraft for French Navy frigates. It was launched in 2016 or 2017 as the successor program to SERVAl (*Système Embarqué de Reconnaissance Vecteur Aérien Léger*), an initiative to integrate an unmanned rotorcraft into French Navy operations. In December 2017, the French military procurement agency awarded Airbus Helicopters and Naval Group a contract to lead the development of the SDAM platform based on the team's VSR700, which is currently under development.¹³ The program is aiming to field a demonstrator air vehicle by 2021 for flight tests and to introduce the SDAM into the fleet by 2027.¹⁴ SDAM has a total acquisition goal of 15 aircraft.
- The MoD has informed the Senate that it intends to purchase 20 new Class I tactical UAVs for the Special Forces by 2025 to replace the Skylark.¹⁵

61st Artillery Regiment, Intelligence Command ¹⁹	<i>61e régiment d'artillerie, Commandement du Renseignement</i>	Général d'Aboville Barracks, Chaumont	D	Sperwer, Tracker, Patroller, Black Hornet 3	1999
Formed in 1910, the 61st Artillery Regiment merged with the 7th Artillery Regiment in 1999 to become the Army's primary UAV unit. The 61st is subordinated to the Intelligence Command and comprised of four UAV batteries, an intelligence processing battery, a maintenance battery, a headquarters and logistics battery, and a reserve battery. The 61st took delivery of the first Patroller in mid-2019, and will transition fully from the flying the Sperwer to the Patroller by 2020.

AIR FORCE

Name		HQ	Type	Equipment	Activated
1/33 Squadron “Belfort”, 33rd Surveillance, Reconnaissance, and Attack Wing ²⁷	<i>l’escadron de drones 1/33 “Belfort”, 33e Escadre de surveillance, de reconnaissance et d’attaque</i>	Air Base 709 Cognac-Chateaubernard	D	MQ-9 Reaper	2010

As of this writing, the 1/33 is comprised of three groups—SAL 33, VR291, and BR218—totaling 20 aircrews and five or six operational aircraft.²⁸ Each French MQ-9 Reaper is crewed by four airmen—a pilot, sensor operator, tactical coordinator, and imagery interpreter. By 2020, the 1/33 Sqn is expected to be equipped with a total of 12 aircraft. The 1/33 previously flew the Harfang and the RQ-5 Hunter. In 2019, the French Air Force announced that it would reactivate the 33rd Wing, a former fighter squadron, and subordinate the 1/33rd Sqn to the new air wing.²⁹ The 33rd Wing will be formally reintroduced on 5 September 2019 and will manage the planned expansion of the 1/33rd Sqn.

3/33 Drone Operational Transformation Squadron, 33rd Surveillance, Reconnaissance, and Attack Wing ³⁰	<i>3/33 “Moselle” Escadron de Transformation Opérationnelle Drone, 33e Escadre de surveillance, de reconnaissance et d’attaque</i>	Air Base 709 Cognac-Chateaubernard	D	MQ-9 Reaper	2019
--	--	------------------------------------	---	-------------	------

The 3/33rd Sqn is new unit that will manage some of the training of French Reaper aircrews. It was activated in mid-2019 as part of a planned expansion of the 1/33rd Sqn and reorganization of the Air Force’s Reaper training program.

10th Parachute Commando (Air Force), Special Operations Command ³²	<i>Commando Parachutiste de l'Air no 10 (l'Armée de l'Air), Commandement des Opérations Spéciales</i>	Air Base 123 Orleans-Bricy	ND	Skylark-1LE	2009
13th Dragoon Parachute Regiment (Army), Special Operations Command ³³	13e Régiment de Dragons Parachutistes (l'Armée de Terre), Commandement des Opérations Spéciales	Sauvagnac Garrison, Nouvelle-Aquitaine	ND	Sky-lark-1LE	
1st Marine Parachute Regiment (Army), Special Operations Command ³⁴	1er régiment de parachutistes d'infanterie de marine (l'Armée de Terre), Commandement des Opérations Spéciales	Bayonne Garrison, Nouvelle-Aquitaine	ND	Sky-lark-1LE	

TRAINING

- The 61st Artillery Regiment is responsible for training personnel from the 61st in Sperwer and Tracker operations as well as personnel from other all other regiments that operate the Tracker.³⁵ The 13th Engineer Regiment is responsible for training engineers in the operation of the IT180-3EL-1. The 1st Marine Infantry Parachute Regiment and the 13th Parachute Dragoon Regiment are responsible for training special forces units to operate the Skylark.
- In 2017, the French Army established a specialized training program to prepare for the arrival of the Sagem Patroller the following year.³⁶ The program combines education in the technical operation of the Patroller and over 200 hours of theoretical training on regulations, procedures, and aircraft familiarity. Training and instruction takes place at the School of Army Light Aviation (ELAT) and the 61st Regiment's Delegated Training Center (CFD), in partnership with the DCI Group's International Helicopter Training Center. The program will train 18 operators per year for four years.
- In September 2014 the French Air Force stood up the Center of Excellence for Drones (*centre d'excellence drones*) at Air Base 701 Cognac-Chateaubernard to coordinate training for MQ-9 Reaper crews and to conduct research into drone operations and technology.³⁷ Until recently, however, French aircrew training was largely split between a course led by the U.S. Air Force in the U.S. and a second course led by U.S. contractors in Niger.³⁸ This was due to a lack of aircraft available for training missions. The introduction of additional Reapers in 2017 allowed the French Air Force to transfer a Reaper from Niamey to Cognac to begin conducting training missions in France. A second Reaper was transferred in 2018.³⁹ In May 2019 the French Air Force introduced a plan to train Reaper aircrews entirely in France.⁴⁰ It involves activating a new air wing, the 33rd Wing and a new drone unit, the 3/33rd ETOD Sqn, to train aircrews. Under the new plan, training will take place in two stages. In the first stage, which will be managed by the Center of Excellence for Drones, cadets will learn basic aeronautical concepts and receive practical flight instruction on a Cirrus sport aircraft. The second stage, which will be managed by the 3/33rd ETOD Sqn, will take place at Cognac and will involve theoretical and practical instruction specific to the Reaper. The Air Force intends to train between 80 and 100 Reaper aircrews by 2030.

OPERATIONS	Country	Base	Equipment	Period	Operation
	Balkans		CL-289, Sperwer, Hunter, Crecelle	1995, 2001, 2007-2008	IFOR, KFOR

In 1995, the 7th Artillery Regiment (*7e régiment d'artillerie*)—which was merged with the 61st Regt in 1999—deployed with the CL-289 for several months to Bosnia to support the Implementation Force (IFOR).⁴¹ The 1/33 Squadron deployed in 2001 with RQ-5 Hunter to Kosovo, where it completed over 25 missions in support of the Kosovo Force (KFOR).⁴² The 61st Artillery Regiment deployed between 2007 and 2008 with the Sperwer to Kosovo.⁴³

Lebanon	Sperwer	2006-2007	UNIFIL
---------	---------	-----------	--------

A detachment of the 61st Artillery Regiment deployed to Lebanon with the Sperwer in the wake of the 2006 Lebanon War.⁴⁴ The 61st Regt supported UNIFIL, the U.N. peacekeeping mission.

Chad	CL-289	2008-2009	EUFOR Chad
------	--------	-----------	------------

A detachment of the 61st Artillery Regiment deployed to Chad with the CL-289 between 2008 and 2009 to support the European Union Force Chad (EUFOR Chad).⁴⁵ It was the last operational deployment of the CL-289.

Afghanistan	Bagram Airfield	Sperwer, Harfang, DRAC	2008-2012	ISAF/Enduring Freedom
-------------	-----------------	------------------------	-----------	-----------------------

The August 2008 Uzbini Valley Ambush, in which 10 French soldiers died, prompted the French government to rapidly deploy drones to Afghanistan.⁴⁶ The 61st Artillery Regiment deployed with the Sperwer to Afghanistan in November 2008. By October 2011, the 61st had carried out 1,000 missions with the SDTI.⁴⁷ The 61st withdrew from Afghanistan in June 2012.⁴⁸ The 1/33 Squadron deployed with the Harfang to Afghanistan between 2009 and 2012. The Harfang carried out approximately 660 sorties, resulting in more than 5,000 flight hours.⁴⁹

Libya	Naval Air Station Sigonella	Harfang	2011	Harmattan
-------	-----------------------------	---------	------	-----------

The 1/33 Squadron deployed with the Harfang to NAS Sigonella, Italy to support Unified Protector, the 2011 NATO-led intervention in Libya.⁵⁰

Central African Republic	N/A	Sperwer	2017-2018	MINUSCA
--------------------------	-----	---------	-----------	---------

The 61st Artillery Regiment deployed with the Sperwer to support the U.N.'s Multidimensional Integrated Stabilization Mission in the Central African Republic.^{51,52}

Niger, Mali	Air Base 101, Niger	Harfang, MQ-9 Reaper, Mavic, Tracker	2014-	Barkhane
-------------	---------------------	--------------------------------------	-------	----------

The 1/33 Squadron deployed with the Harfang to Niger in January 2013 to support counterterrorism operations in neighboring Mali.⁵³ France's first MQ-9 Reaper arrived in Niger in December 2013. As of April 2018, French Reapers had flown more than 20,000 flight hours in the Sahel.⁵⁴ In November 2018, a Reaper crashed short of the runway at Air Base 101.⁵⁵ The French Reapers in Niger will be armed with laser-guided bombs by the end of 2019 and with Hellfire missiles by 2020. Meanwhile, French ground forces in Mali have deployed with the Tracker since the start of the conflict.⁵⁶ And, beginning in early 2018, a special forces detachment of the 35th Parachute Artillery Regiment in Mali was equipped with the Mavic Pro. Writing in *Fantassins* magazine in early 2019, Captain Kenneth Mac Dowall described the unit's experiences with the consumer drone, finding that it was useful in certain circumstances such as creating battlefield damage reports, but that there were several drawbacks to deploying it in a combat environment.⁵⁷

DOMESTIC OPERATIONS

- France's domestic drone deployments focus on providing surveillance for high-profile events. In 2003, the 1/33 Squadron deployed the RQ-5 Hunter for security operations surrounding the G8 Summit in Evian.⁵⁸ In 2004, the Hunter participated in security operations during the 60th anniversary of the Normandy landings.⁵⁹ During the 2007 G8 Summit in Deauville, the Air Force deployed the newly-acquired Harfang.⁶⁰ An MQ-9 Reaper participated in the July 14 Bastille Day Parade in 2017—the Reaper's first operational mission in domestic airspace.⁶¹ In its annual report on activities in 2018, the Air Force said that it has offered to support local law enforcement with the Reaper during high-profile events, writing that such missions are a way to enhance unit training as well as domestic security.⁶²

DEVELOPMENT

- France is one of the four primary European nations participating in the EuroDrone program. See page XV for more information.
- The Neuron is a Class III UAV developed by a multinational consortium led by France's Dassault Aviation. Launched in 2003, the Neuron program sought to develop a stealthy combat drone capable of penetrating enemy air defenses. Initial flight tests began in 2012 in France and, subsequently, in Sweden in 2015.⁶³ In January 2019 France's *Direction Générale de l'Armement* announced that the Neuron had conducted its 150th test flight. Entities in Greece, Italy, Spain, Sweden, and Switzerland are involved in the program.⁶⁴

ACTIVE ACQUISITIONS

- Germany is considering acquiring the Northrop Grumman MQ-4C Triton high-altitude surveillance drone, known in the Bundeswehr as “Pegasus.”⁹ The Bundeswehr launched this effort in the wake of the Euro Hawk failure in 2013, a program to develop a variant of the Northrop Grumman Global Hawk capable of flying in European airspace. In April 2018 the U.S. State Department approved a possible sale of four Tritons for an estimated \$2.5 billion. As of this writing, the deal has not yet been approved by the German parliament.¹⁰

PERSONNEL

ARMY

- The Technical Intelligence Company (*Technische Aufklärungskompanie*) is one of two primary UAV formations in the German Army. A typical Technical Intelligence Company contains one or more platoons equipped with UAVs and one or more with radar. The UAV platoons appear to be equipped with the LUNA, but are most likely also equipped with smaller drones such as the ALADIN and MIKADO. Most Technical Intelligence Companies are subordinated to a reconnaissance battalion. The reconnaissance battalions, as well as several separate reconnaissance companies, collectively form the Army Intelligence, Surveillance, and Reconnaissance Corps (*Heeresaufklärungstruppe*, or HAufklTr), which the Army stood up in 2008.¹² The *Heeresaufklärungstruppe* is comprised of six reconnaissance battalions, two airborne reconnaissance companies, one reconnaissance company attached to the 291st Jaeger Battalion, and a training center.
- The Reconnaissance Batteries (*Artillerieaufklärungsbatterie*) are the Army Artillery Corps' (*Artillerietruppe*) equivalent to the Technical Intelligence Companies in that they are equipped with both UAVs and radar. The Reconnaissance Batteries are primarily equipped with the KZO. Each Reconnaissance Battery is subordinated to an artillery battalion. The *Artillerieaufklärungsbatterie* are based on the Artillery Corps' Drone Batteries (*Drohnenbatterie*), which the Bundeswehr created in the mid-1980s to operate the CL-289.¹³ The *Drohnenbatterie* were active until the early 2000s when the Bundeswehr reorganized the Artillery Corps, dissolving the *Drohnenbatterie* or merging them with other units to create the current *Artillerieaufklärungsbatterie*.

TRAINING

- Army drone operator training takes place at the Training Center Munster (*Ausbildungszentrum Munster*) and the Training Area Military Joint Tactical Support/Indirect Fire at Idar-Oberstein (*Ausbildungsbereich Streitkräftegemeinsame Taktische Feuerunterstützung/Indirektes Feuer*).²⁸ The Reconnaissance Forces Training Area (*Ausbildungsbereich Heeresaufklärungstruppe*), which is based at Munster and subordinated to the Army ISR Command, provides operator training for the MIKADO, ALADIN, and LUNA.²⁹ Specialized training in the operation of the KZO takes place at Idar-Oberstein, the artillery academy.
- Air Force operator training takes place at the 51 Tactical Air Squadron at Jagel Air Base and at Tel Nof Air Force Base in Israel. The Air Force training program lasts approximately 11 weeks and combines theoretical and practical instruction. At Jagel, operators are trained on the simulator. In January 2019, the first German Air Force Heron TP operators arrived in Israel.³⁰ Over the next two years, 70 German personnel are expected to complete the course.³¹

OPERATIONS

Country	Base	Equipment	Period	Operation
Balkans ³²		CL-289, LUNA, ALA-DIN	1997-1999, 2003 - Unknwon	SFOR, KFOR
Germany deployed with the CL-289 to the Balkans twice in the late 1990s; in 1997 and between 1998 and 1999. In 1998 and 1999, the CL-289 conducted 212 missions as part of the Kosovo Force, most of which were dedicated to tracking the movements of refugees of the Kosovo War. The Bundeswehr also deployed the LUNA and ALADIN to the Balkans in 2003.				
Afghanistan ³³	Camp Marmal	MIKADO, ALADIN, LUNA, KZO, Heron 1	2003-	Enduring Freedom, Resolute Support

German reconnaissance units deployed with the LUNA to Afghanistan beginning in 2003. The Army introduced the ALADIN in Afghanistan in 2005 and the KZO in 2009. The Air Force deployed three leased Heron 1 drones to Afghanistan in 2010. German drones initially supported operations around Kabul. Of the five German drones deployed to Afghanistan, the LUNA and Heron 1 accumulated the most flight hours. As of 2017, the leased Heron 1s had flown more than 30,000 flight hours in Afghanistan.³³ In December 2018, Germany extended the contract to lease the Heron 1 for operations in Afghanistan until May 2020.³⁴

Mali ^{35,26}	Gao	Heron 1, LUNA	2016-	MINUSMA
-----------------------	-----	---------------	-------	---------

In 2016 Germany deployed three leased Heron 1s to Gao in support of the United Nations Multidimensional Integrated Stabilization Mission in Mali. Germany extended the contract for the leased Heron 1s in Mali in January 2017 and again in December 2018. The Heron 1s are expected to be deployed in Mali until July 2020.³⁷

Figure 9: German UAV Operational Flight Hours from 1990 to 2019

System	Period of Record	Flight Hours
ALADIN	2005 - June 2019	6,983
Black Hornet	2018 - June 2019	66
CL 289	1990 - 2009	468
Phantom (DJI)	2017 - June 2019	104
Heron 1	2010 - May 2019	50,086
KZO	2004 - May 2019	7,121
LARUS	2019 - June 2019	0
LUNA	2003 - May 2019	18,219
MIKADO	2011 - June 2019	4,379
<i>Total</i>		<i>87,426</i>

ACTIVE ACQUISITIONS

- Greece reportedly intends to spend approximately \$44 million on a three-year lease for seven Israel Aerospace Industries Heron 1 UAVs.³ In a briefing before a parliamentary committee in February 2018, Greek Alternate Minister of National Defence Dimitris Vitsas said that the acquisition would largely be used for security operations in the Mediterranean. As of this writing, the status of the project is unclear.
- In July 2018, the European Union awarded the Greek Ministry of Defense a \$1.3 million grant to acquire 25 surveillance drones for the Hellenic Army, which previously lacked an unmanned Class I ISR capability organic to smaller formations.⁴ Although the make and model of these aircraft has not been disclosed, it is likely to be a small fixed-wing aircraft equivalent to the RQ-11 Raven.

The Hungarian Provincial Reconstruction Team 8 (HUN PRT-8), a composite unit that included detachments from various branches of the armed forces, was the first Hungarian rotation to deploy with the Skylark-1LE to Afghanistan. Successive rotations of Hungarian PRT forces also deployed with Skylarks, which were flown by the 24th Reconnaissance Battalion.

ACTIVE ACQUISITIONS

- The P.1HH “Hammerhead” and P.2HH, the planned successor to P.1HH, are medium-altitude long-endurance systems based on the manned Piaggio P-180 business aircraft. The P.1HH and P.2HH are built by Piaggio Aerospace, an Italian firm that was owned by the UAE’s Mubadala fund until December 2018. The P.1HH was unveiled in 2013.⁵ The Italian Air Force has funded some of the development of the Hammerhead. Flight tests have been carried out at Trapani Air Base in Sicily.⁶ One prototype aircraft crashed off the Sicilian coast in 2016. In March 2018, the Italian MoD submitted a request to Parliament to purchase ten P.1HH and P.2HH systems (20 total aircraft) for 755 million euros.⁷ This proposal fell apart later in the year when a new government took power in Rome, throwing the Piaggio’s future into doubt. As of April 2019, the Italian government appeared ready to purchase four P.1HH aircraft for the Air Force with future purchases possible.⁸

TRAINING

- The Center of Excellence for Remotely Piloted Aircraft (*Centro di Eccellenza per Aeromobili a Pilotaggio Remoto*, or CdE APR) at Amendola Air Base is responsible for providing UAV operator training for all branches of the military, as well as to civilian public safety officers, and for developing operational concepts for unmanned aircraft employment.^{14,15} Activated in October 2009, the CdE APR is managed by the Air Force's 3rd Department for Aerospace Planning. A typical training program at CdE APR includes a course dedicated to the doctrine and use of unmanned systems and a second course, based on STANAG 4670, the NATO guidance for UAV operator training, that trains students in aircraft and sensor operations. RQ-7 and MQ-1/9 operators receive standard pilot training and certification at the 70th Air Wing. The CdE APR also works on developing counter-UAS operational concepts and training. As of February 2019, more than 470 personnel have attended the CdE APR.
- Until 2018, specialized additional training for Italy's MQ-1 and MQ-9 pilots and sensor operators took place largely at Holloman Air Force Base in the United States. In 2018 the Italian Air Force inaugurated a new training simulator for the Predator and Reaper drones at Amendola, making it possible for some MQ-1/9 training to be conducted in Italy.¹⁶ The introduction of these new systems was part of the European Defense Agency's initiative to enhance European drone training capabilities.

OPERATIONS

Country	Base	Equipment	Period	Operation
Iraq ¹⁷	Tallil Air Base	MQ-1 Predator, FQM-151 Pointer	2005-2006	Ancient Babylon
Italian Air Force MQ-1 Predator drones deployed to Iraq in January 2005. The Predator was tasked with carrying out ISR missions in the Dhi Qar Governorate. The Predators monitored the withdrawal of Italian forces from Iraq in 2005 and 2006. Italian forces in Iraq were also equipped with the FQM-151 Pointer, the predecessor to the RQ-11 Raven, for short-range re-connaissance.				
Afghanistan	Camp Arena, Herat	MQ-1 Predator, MQ-9 Reaper, RQ-7 Shadow, Strix-C, Bramor	2007-	Enduring Freedom (US), Resolute Support (US)
Between 2007 and 2014, Italian MQ-1 Predators accumulated more than 13,000 flight hours in Afghanistan. ¹⁸ In 2014, Italian MQ-9 Reapers replaced the Predators. In 2016, the Italian Army's 1st Aviation Regiment and 41st "Cordenons" Regiment deployed with the RQ-7 Shadow to Afghanistan. As of early 2019, the Italian Shadows had accumulated 2,000 flight hours in Afghanistan. ¹⁹ Separately, Italy has deployed the Bramor and the Strix-C to enhance perimeter security at Camp Arena and Herat Air Base. ^{20,21}				
Libya ²²	Trapani Air Base	MQ-9 Reaper	2011	Odyssey Dawn/Uni-fied Protector

In August 2011, shortly after they achieved initial operational capability, several Italian MQ-9 Reapers were deployed to support the NATO-led intervention in Libya. The aircraft were based at Trapani in Sicily and were controlled from Amendola Air Base via satellite by Air Force personnel with the 28th Squadron.²³

Kosovo ²⁴	MQ-9 Reaper, RQ-11 Raven	2012,2014-2015	Joint Enterprise, Ko-sovo Force
----------------------	-----------------------------	----------------	------------------------------------

In 2012, an MQ-9 Reaper with the 28th Squadron supported the NATO Operation Joint Enter-prise in Kosovo. In October 2014, elements of the 41st “Cordones” Regiment equipped with the RQ-11 Raven were deployed for six months to Kosovo with the 5th Alpine Regiment.

Mediterranean	Sigonella	MQ-1 Predator	2013-	Mare Nostrum, Mare Sicuro
---------------	-----------	---------------	-------	------------------------------

The Italian Air Force’s Predators have been a fixture of Italy’s security operations in the Mediterranean. When Italy launched Operation Safe Sea (Mare Sicuro) in 2015, at least one Air Force Predator A or Predator B supported the operation.²⁵ In 2017 the Italian Air Force activated the 61st Squadron which, together with personnel from the 28th Squadron and 41st Air Wing, primarily provides ISR support for Safe Sea.²⁶

Djibouti ²⁷	Chabelley Air Base	MQ-1 Predator	2014-2015	Atalanta
------------------------	-----------------------	---------------	-----------	----------

In August 2014, the 28th Sqn deployed for an eight-month tour in Djibouti under Operation Atalanta, the E.U.’s counter-piracy mission off the Horn of Africa. Over the course of the deployment, the Italian drones completed 28 missions, totalling more than 300 flight hours.

Iraq ²⁸	Ali Al Salem, Kuwait	MQ-1 Predator	2014-	Inherent Resolve (US)
--------------------	-------------------------	---------------	-------	--------------------------

Beginning in 2014, Italy contributed two MQ-9 Reapers with the 32nd Air Wing to Operation Inherent Resolve, the U.S.-led counter-ISIS campaign in Syria and Iraq. The Reapers are based at Ali Al Salem, alongside U.S. and U.K. MQ-9 Reapers. The Italian Reapers identified targets for Coalition jets and provided ISR support to Kurdish forces.

DOMESTIC OPERATIONS

- In March 2019, the Army deployed with the RQ-11 Raven in Operation Land of Fires (Terra dei Fuochi) to combat illegal dumping.²⁹ The operation focused on the Naples region and involved both military and civilian law enforcement personnel.

DEVELOPMENT

- Italy is one of the four primary European nations participating in the EuroDrone program. See page XV for more information.
- The P.2 HammerHead (P.2HH) is a Class III UAV developed by Piaggio Aerospace.³⁰ It is the successor to the P.1 HammerHead, which the Italian Air Force intends to buy. Piaggio announced that it was working on the P.2HH in 2018. Although the company has revealed the exact specifications, the P.2HH is reportedly significantly larger than its predecessor.
- The Falco Xplorer is a Class III UAV developed by Leonardo. It was unveiled at the 2019 Paris Air Show.^{31,32} The Xplorer reportedly has a maximum take off weight of 13,000 kilograms, a payload capacity of 350 kilograms, and an endurance of 24 hours. It is the largest UAV developed by Leonardo. The Xplorer was scheduled to begin flight tests in June 2019, with deliveries to future customers beginning in 2020.

Remotely Piloted Vehicle Group ^{5,6}	<i>Nuotoliniu būdu valdomų orlaivių grandies</i>	D	ScanEagle	

The Lithuanian Armed Forces appears to have activated a unit known as the Remotely Piloted Vehicle Group, or NBVOG, to operate the ScanEagle. Not much is known about this unit except that it may be subordinated to the Air Force and tasked with providing ISR support to ground and special forces. In September 2018, the NBVOG conducted a training exercise at Pajuosčio Air Base.

ARMY

Name		HQ	Type	Equipment	Activated
107th Aerial Systems Battery, Joint ISTAR Command	<i>107 Aerial Systems Batterij, JISTARC</i>	't Harde	D	Integrator, ScanEagle	2012

The Army activated the 101st RPV Battery, 103rd ISTAR Battalion to operate the Sperwer in 1998. In 2011 the Army launched the Joint Intelligence, Surveillance, Target Acquisition and Reconnaissance Command (JISTARC). The Army redesignated the 101st RPV Bty as the 107th Aerial Systems Bty and subordinated it to JISTARC in 2012. The 107th has four operational platoons.

AIR FORCE

Name		HQ	Type	Equipment	Activated
306th Squadron		Leeuwarden Air Base	D	MQ-9 Reaper	2018

Originally founded in 1953 as a fighter training squadron, the 306th was inactive from 2010 to September 2018, when the Air Force reactivated the unit to operate the MQ-9 Reaper.

OPERATIONS

Country	Base	Equipment	Period	Operation
Afghanistan	Camp Holland, Tarin Kowt	Sperwer, Aladin, Raven, Aerostar	2006-2010	ISAF/Enduring Freedom
The 101st RPV Bty deployed twice to Afghanistan with a fleet of Sperwers that flew 285 missions, accumulating 713 flight hours. ⁹ The Sperwers were replaced by contractor-owned, contractor-operated Aeronautics Aerostars in 2009, which were active until the Dutch withdrawal from Afghanistan the following year. ¹⁰				
Indian Ocean	HNMS Rotterdam	ScanEagle	2012-2013	Ocean Shield
In 2012 specialists with the Joint ISTAR Command deployed on board the amphibious assault ship HNMS Rotterdam for Ocean Shield, a NATO counter-piracy operation in the Indian Ocean. It was the first deployment for the Dutch ScanEagle. ^{11,12}				
Mali	Camp Castor, Gao	ScanEagle, Raven	2014-2016	MINUSMA
Between 2014 and 2016, elements of the 107th Aerial Systems Bty deployed with the U.N. Multidimensional Integrated Stabilization Mission in Mali (MINUSMA) to provide intelligence support. ¹³ Dutch ScanEagles flew more than 1,000 flight hours before the German Bundeswehr took over the intelligence mission in 2016. ¹⁴

ACTIVE ACQUISITIONS ^{10,11}

The Polish Armed Forces Development Program 2013-2022 laid out a plan to acquire a range of Class I, II, and III UAVs, though some of these programs have faced delays.

- With the Orlik program, the MoD sought to acquire a Class I tactical UAV. In December 2018, the MoD awarded a \$209 million contract for 40 PGZ-19R UAVs for the Orlik program.¹²
- With the Wizjer program, the MoD is seeking a Class I system for short-range reconnaissance for use at the battalion level. The Wizjer system will match the capabilities of a Class I UAV like the WB Electronics FlyEye. The procurement goal is for around 15 systems, which will likely amount to some 60 air vehicles.
- With the Wazka program, the MoD is seeking a Class I rotary-wing vertical take-off and landing drone capable of day and nighttime operations. The procurement goal is six systems, each comprising of two aircraft. After cancelling the program in 2017, the MoD re-started this procurement program in December 2018.¹³

- With the Gryf program, the MoD is seeking to acquire 12 or more Class II medium-range, strike-capable drones. In 2015, the Polish Armament Group and the Israeli defense firm Elbit Systems proposed a domestically-produced variant of the Elbit Hermes 450 for the program.
- With the Zefir program, the MoD is seeking to acquire four Class III UAVs. The two options currently under evaluation are reportedly the U.S. General Atomics Aeronautical Systems MQ-9 Reaper and the Israeli Elbit Hermes 900.

PERSONNEL

AIR FORCE

Name	HQ	Type	Equipment	Activated
12th Unmanned Aerial Vehicle Base, 1st Tactical Aviation Wing ^{14,15}	<i>12. Baza Bezzałogowych Statków Powietrznych, 1. Skrzydło Lotnictwa Taktycznego</i> Miroslawiec Air Base	D	Orbiter	2016

In 2006 the Army activated the Air Reconnaissance Squadron, 1st Tactical Aviation Brigade to operate surveillance and reconnaissance drones. Following the deactivation of this unit in 2015, responsibility for UAV operations was transferred to the 12th UAV Base. Though the Air Force initially activated the 12th with the idea that it would eventually operate a Class III aircraft, it is currently equipped with only Class I aircraft.

SPECIAL FORCES

Name	HQ	Type	Equipment	Activated
Imagery Analysis Section, Information Support Group, Military Unit NIL ¹⁶	<i>Rozpoznania obrazowego, Grupy Wsparcia Informacyjnego, Jednostki Wojskowej Nil</i> Krakow	D	FlyEye, ScanEagle, Blackjack	2011

The Imagery Analysis Section is one of three sections in the Informational Support Group. It is primarily responsible for UAV operations. Military Unit NIL began operating drones in 2011 when it took delivery of the ScanEagle. NIL is a Polish Army special forces unit tasked with providing intelligence, logistics, and command support to special operations.

TRAINING

- The Unmanned Aerial Vehicles Training Center (*Ośrodek Szkolenia Obsługi Systemów Bezzałogowych Statków Powietrznych*, or OSOSBSP) is a training facility for pilots, sensor operators, and mechanics located at the Polish Air Academy in Dęblin.¹⁷ It is equipped with 3 Innocon Micro-Falcon systems and several simulators.¹⁸

OPERATIONS

Country	Base	Equipment	Period	Operation
Afghanistan ^{19, 20}	Ghazni Province	ScanEagle, Orbiter	2011-	ISAF/Enduring Freedom

Polish forces deployed drones operationally for the first time in Afghanistan. Polish forces were equipped with both the Orbiter and the ScanEagle. During one six-month rotation in 2011, Polish special forces conducted nearly 700 missions, accumulating over 2,700 flight hours.

ACTIVE ACQUISITIONS

- In 2016, the Romanian Ministry of National Defense (MApN) launched a 55 million euro competition for Class I UAVs for the Romanian Land Forces.⁸ In January 2017, the MApN selected the Aeronautics Orbiter 4. However, the contract was reportedly cancelled the following month after Israel Aerospace Industries, a competitor for the contract, appealed the decision.⁹ As of this writing, it is not clear how the MApN proceeded with this acquisition program.

SERBIA

INVENTORY

Model	Make	Origin	Class	Intro	Qty	Operator	Notes
Orbiter ¹	Aeronautics	Israel	I	2008	30 (10)	Army	

ACTIVE ACQUISITIONS

- In September 2018, Deputy Defense Minister Nenad Miloradovic confirmed that Serbia intends to purchase combat drones from China.² Under the terms of the agreement, the aircraft would be assembled in Serbia. The cost of the acquisition is reportedly around \$30 million.³ Serbia would be the first European nation to purchase a Class III system made in China. In September 2019, Serbia announced that it would take delivery of nine Wing Loong 1s within six months. An follow-on order for additional aircraft is possible.

DEVELOPMENT

- The Vrabac (*BPABAI*) is a fixed-wing Class I system unveiled in 2008. It is developed by the Serbian Military Technical Institute Belgrade. It conducted its maiden flight in 2011 and it was displayed at UMEX-2018, an arms fair in the United Arab Emirates.
- The Mini Aleks is a Class I UAV developed by Engine Development and Production company (EDePro). EDePro unveiled the Mini Aleks at the IDEX defense trade show in Abu Dhabi in February 2019. According to media reports, it is set to make its maiden flight in mid-2019.

ACTIVE ACQUISITIONS

- Spain is evaluating several Class I drones to augment and eventually replace its fleet of U.S.-made RQ-11 Ravens.¹⁷ The Army, Navy, and Marines have acquired a Fulmar X, Toucan, and Atlantic for operational evaluation. By fielding several platforms with operational units for test and evaluation, the MoD is seeking to shorten the acquisition process.¹⁸
- The MoD is seeking a replacement for the Searcher, which is expected to be retired by the mid-2020s.¹⁹ The Project Rapaz roadmap names the Airbus DS Atlante and the Indra Pelicano as two possible options to succeed the Searcher.

TRAINING

- The Spanish Air Force's UAS School (*Escuela de UAS de las FAS*) was established in 2012 to provide professional training to all Spanish operators of Class I and II UAVs.³⁸ In its first two years of operation, the UAS School graduated 242 students certified as Operator of UAS (Operador de Sistemas Aéreos no Tripulados).³⁹ The school is equipped with simulators and training aircraft, including the SIVA and Tucan UAVs.⁴⁰
- Spain's MQ-9 Reaper pilots and sensor operators are trained in Spain and in the United States.⁴¹

OPERATIONS	Country	Base	Equipment	Period	Operation
	Afghanistan	Herat Airport; Qala-i-Nau	Searcher; RQ-11B Raven; ScanEagle (COCO)	2008-2014	

Between 2008 and 2014, Spanish troops equipped with the Searcher and Raven were deployed to north-west Afghanistan to provide assistance to Regional Command West, International Security Assistance Force. The Searcher was initially deployed to Herat Airport and then to Qala-i-Nau. The Spanish military flew more than 1,000 Searcher missions, accumulating over 6,000 flight hours.⁴² Three teams from the 1st Intelligence Regiment and two teams from the 63rd Rocket Artillery Regiment were responsible for Searcher operations. In 2012 NATO also assigned contractor-operated ScanEagles to Spanish troops at Qala-i-Nau.

Iraq	Gran Capitán Base, Bismayah, Iraq	ScanEagle	2017-2018	Inherent Resolve (US)
------	-----------------------------------	-----------	-----------	-----------------------

In 2017 and 2018, elements of the Navy's 11th Sqn deployed to Gran Capitán Base, Bismayah, Iraq for Operation Inherent Resolve.^{43, 44} The 11th Sqn detachment equipped with the ScanEagle integrated with the Special Operations Tactical Group (SOTG VII), one of the Spanish special forces teams deployed to assist with training Iraqi forces.

Indian Ocean	<i>ESPS Galicia</i>	ScanEagle	2015-2017	Atalanta
--------------	---------------------	-----------	-----------	----------

Between 2015 and 2017, the 11th Sqn deployed with Spain's amphibious assault ship Galicia for Operation Atalanta, a EU-led counter-piracy operation.⁴⁵ This was the first deployment for the 11th Squadron's ScanEagle. During its 18-month deployment, the ScanEagle flew more than 700 flight hours.⁴⁶

(Left) The 11th Sqn in Iraq in November 2018. (Right) The Navy's Alcotán UAV, a trial system under the *Rapaz* program. Photos credit: Armada Espanola / Flickr

DOMESTIC OPERATIONS

- The Army deployed with Searchers in 2017 to help combat wildlives in northwest Spain, accumulating 147 flight hours. In 2018, the Army again deployed with Searchers for a three-month period in 2018 to detect wildfires and surveil at-risk areas.⁴⁷

DEVELOPMENT

- Spain is a participant in the EuroMale development project. It joined the project in mid-2016. In November 2018, the Air Force confirmed that it is seeking to acquire 15 of the planned Class III aircraft.⁴⁸ The Air Force considers its MQ-9 Reapers to be an interim capability to provide the Air Force with operational experience with a Class III system until the EuroMale is available. For more on the EuroMale project, see page XV.

The TUAV Platoon is one of five platoons that in the 320th Sqn, which is responsible for the 32nd Reconnaissance Battalion's staff and support operations.^{6,7}

TRAINING

- The Flight Unit (*FlygEnheten*) is a division of Life Regiment Hussars K 3 (*Livregementets husarer K 3*) responsible for UAV and parachute training.⁸ It was established in 2009.

OPERATIONS

Country	Base	Equipment	Period	Operation
Afghanistan	Camp Marmal, Afghanistan	RQ-7 Shadow, Skylark	2011-2013	ISAF
Mali	Timbuktu	RQ-7 Shadow, Puma	2015-2017	MINUSMA

Sweden deployed the TUAV Platoon to Afghanistan with RQ-7 Shadows in 2011.⁹ Camp Marmal in northern Afghanistan served as the launch and recovery base for the aircraft, which were then remotely operated by personnel at Camp Northern Lights in Mazar-e-Sharif. Afghanistan was the first deployment for the Swedish Shadows, which the Army rushed into service within months of delivery. The Shadows completed over 300 missions during the nearly two-year deployment.

In 2015, Sweden deployed the 32nd Intelligence Battalion with Shadow and Puma drones to Timbuktu for the United Nations Stabilization Mission in Mali (MINUSMA).¹⁰ Alongside the 32nd Btn's TUAV Platoon, the Swedish ISR Task Force included a small UAV team responsible for supporting the motorised reconnaissance platoon.¹¹ In November 2017, the Swedish Defence Research Agency (FOI) released a comprehensive analysis of Sweden's operations under MINUSMA based on interviews with deployed personnel.¹²

ACTIVE ACQUISITIONS

- The Mini-Drone program is an active acquisition effort by the Swiss Federal Department of Defense (DDPS) to acquire Class I UAVs for the Army.² It is expected to acquire a mix of rotary- and fixed-wing aircraft for short-range ISR. In April 2018, the program evaluated the Israeli-made Aeronautics Orbiter 2B and the Polish-made WB Electronics FlyEye. The total value of the program is CHF 8 million, or approximately \$8 million. The DDPS is expected to award a contract in 2019 and to complete the program by 2021.

MQ-9 Reaper	GA-ASI	USA	III	2007	10	Air Force	“RPAS”

ACTIVE ACQUISITIONS

- The General Atomics MQ-9B SkyGuardian—known in the U.K. as Protector RG.Mk1—is an upgraded variant of the MQ-9 Reaper.³ The Protector was designed to meet NATO STANAG 4681 airworthiness standards and will be equipped with “sense-and-avoid” and auto take-off and landing capabilities. The MoD intends to initially acquire 16 Protectors to replace its fleet of MQ-9 Reapers. The Protectors will be assigned to the No. 31 Squadron and based at RAF Waddington and are expected to enter service by 2024.⁴
- In the coming years, the British Army will likely seek a replacement for the Desert Hawk Mk3. Media reports in 2017 suggested that the Army was exploring potential replacement options, including an industry partnership to lease aircraft.⁵ The Desert Hawk is scheduled to remain in service until 2021.

PERSONNEL

ARMY

Name	HQ	Type	Equipment	Activated
32nd Regiment Royal Artillery, 1st Intelligence, Surveillance, and Reconnaissance Brigade ⁹	Horne Barracks, Larkhill	D	Desert Hawk III	2003
<p>The 32nd Regiment is comprised of 22nd Battery, 18th Battery, 57th Battery, and 46th Battery (HQ). Between 2003 and 2008, the 22nd Battery was equipped with the Phoenix. Beginning in 2007, the 32nd leased nine Hermes 450 aircraft for operations in Iraq and Afghanistan.¹⁰ Under the Army 2020 restructuring plan, the 32nd is scheduled to be disbanded in 2021 and primary responsibility for UAV operations will be shifted to the 47th Regt.</p>				
47th Regiment Royal Artillery, Joint Helicopter Command ^{11,12}	Horne Barracks, Larkhill	D	Watchkeeper	2010
<p>The 47th Regiment is comprised of the 10th Battery, 43rd Battery, 74th Battery (Support), and the 31st Battery (HQ). In 2007, while serving as an air defense unit, the 47th assumed responsibility for the Desert Hawk in Iraq as a way to relieve pressure on the 32nd Regiment. Although this arrangement was initially intended to be temporary, the 47th retained responsibility for the Desert Hawk for the remainder of the U.K.'s mission in Iraq. In 2010 the 47th was officially reformed as a dedicated UAV regiment. It began focusing on Watchkeeper operations in 2015.</p>

AIR FORCE

Name	HQ	Type	Equipment	Activated
No. 13 Squadron ¹³	RAF Waddington	D	MQ-9 Reaper	2012
The RAF converted the 13th Squadron from a Tornado fighter squadron to an MQ-9 Reaper squadron in 2012. The 13th remotely operates the Reaper in foreign deployments from RAF Waddington.				
No. 39 Squadron ¹⁴	RAF Waddington, Creech Air Force Base	D	MQ-9 Reaper	2007
Formed as a fighter squadron in 1916, the 39th Squadron became the U.K.'s first MQ-9 Reaper unit in 2007 in order to meet an urgent operational need for U.K. forces in Afghanistan. 39th Sqn is located primarily at Creech Air Force Base in Nevada, where it works alongside U.S. counterpart units that also operate Reapers. As of 2014, 39th Squadron had 90 personnel based at Creech. Additional 39th Squadron personnel are based at RAF Waddington in the U.K. and in Afghanistan.				
No. 216 Squadron ¹⁵		D		
The Royal Air Force announced in July 2019 that the 216th Sqn would be reactivated as an experimental unit dedicated to implementing a drone swarm capability.				

TRAINING

- Classroom and simulator instruction on the British Army's Watchkeeper takes place at the Watchkeeper Training Facility at Larkhill while live training takes place at Aberporth Airport in Wales and Ascension Island in the south Atlantic.^{16,17}
- RAF Reaper pilot training takes place at Holloman Air Force Base and Creech Air Force Base in the United States. The course is organized and led by U.S. personnel, a small number of RAF instructors participate in the training. The course of instruction is based on that of U.S. MQ-9 pilots and sensor operators.

OPERATIONS

Country	Base	Equipment	Period	Operation
Iraq ¹⁸	Shaibah Air Base, Basra; Other	Phoenix, Desert Hawk, Hermes 450	2003-2009	Telic
The 32nd Regiment deployed to Shaibah Air Base in November 2003 to provide ISR the U.K.-led Multi-National Division South East in southern Iraq. Equipped with the Phoenix, the 32nd's 57th Battery was the first British UAV unit to deploy to Iraq. In spring 2004, the 57th Battery was replaced by the 22nd Battery, which equipped with the Desert Hawk 1 in addition to the Phoenix. When the Phoenix was withdrawn from Iraq in mid-2006, it was replaced with leased Hermes 450s that would serve as a stop-gap capability until the Watchkeeper could enter service. In 2007, the 47th Regiment, then serving as an air defense unit, assumed responsibility for Desert Hawk operations from the 32nd, which continued to operate the Hermes. Elements of both regiments served in Iraq until 2009.				

Afghanistan ^{19,20,21}	Kandahar Airfield, Kandahar; Camp Bastion, Helmand	Desert Hawk 1, Desert Hawk 3, T-Hawk, Black Hornet, Hermes 450, MQ-9 Reaper	2006-2014	Herrick
---------------------------------	--	---	-----------	---------

The U.K. first equipped British Army forces in Afghanistan with drones in 2006, with the introduction of the Desert Hawk 1. The following year, the Desert Hawk 1 was replaced by the Desert Hawk 3, which flew more than 18,000 flight hours during Operation Herrick, the U.K.'s name for operations in Afghanistan. Leased Elbit Hermes 450s were deployed in 2007 and accumulated more than 85,000 flying hours operating from Camp Bastion in Helmand province. In 2010, Royal Engineer counter-IED teams deployed the T-Hawk. The Army deployed with the Black Hornet micro-UAV in 2012. The RAF deployed the Reaper in Afghanistan in 2007. Between 2007 and 2014, RAF Reapers conducted around 5,300 sorties in Afghanistan, accumulating approximately 71,000 flight hours. By 2014, RAF Reaper operations accounted for approximately three fourths of all flight hours by RAF aircraft in Afghanistan.

Iraq, Syria	Ali Al Salem, Kuwait	Reaper	2014-	Shader
-------------	-------------------------	--------	-------	--------

In 2014, the RAF deployed two MQ-9 Reapers with 13 Squadron to Ali Al Salem Air Base in Kuwait for Operation Shader, the U.K.'s counter-ISIS campaign in Syria and Iraq.²² In August 2015, an RAF Reaper carried out an airstrike in Syria that killed Reyaad Khan, a U.K. citizen who had joined ISIS.²³ As of March 2018, RAF Reapers had conducted over 2,600 sorties in Iraq and Syria and approximately 880 air strikes.²⁴

DEVELOPMENT

- The MoD has ordered the development of three Airbus Defence & Space Zephyr drones, a solar-powered unmanned aircraft that can stay aloft for weeks at a time. At the time of writing, the Zephyr remains in its development and testing phase.²⁵
- The MoD announced in February 2019 that it was launching an effort to develop swarms of drones, which the MoD intends to field by the early 2020s.²⁶

TRAINING

- In 2016 the Argentine Air Force created a training program dedicated to the operation of unmanned aircraft (*Curso de Operadores de Sistemas No Tripulados*) at the School of Military Aviation (*Escuela de Aviación Militar*).⁴ Practical training occurs at Chamical Air Base. Also in 2016, the Air Force created the Operator of Unmanned Aerial Systems specialization (*Operador de Sistemas Aéreos No Tripulados*, or OSANT).⁵

DEVELOPMENT

- Beginning in 2010, under a program known as Project FAS 0091, the Air Force's Directorate General for Research and Development (*Dirección General de Investigación y Desarrollo*, or DGID) and the Center for Applied Research (*Centro de Investigaciones Aplicadas*, or CIA) developed two systems, the Aukán, a Class I aircraft, and the Vigía 2B, a Class II aircraft. Both entered service as test platforms in 2017.⁸ Flight tests for the aircraft were conducted in 2017 and 2018.⁹ The Air Force carried out more complex tests of the Aukán at Villa Reynolds Air Base in San Luis province. The DGID has also developed a ground control system for the aircraft, the Estación de Control Terrestre.¹⁰

INACTIVE

- In 2014 the Brazilian Army activated the Target Reconnaissance Battery, 9th Field Artillery Group, 5th Army Division (Bateria de Busca de Alvos, 9º Grupo de Artilharia de Campanha, 5ª Divisão de Exército) for a three-year program to explore ways of integrating UAVs into artillery operations.⁸ Army personnel trained to use the FT-100 remotely piloted aircraft system (Sistema de Aeronave Remotamente Pilotada or SARP). The first two dedicated operators graduated from the program in 2016. The Army deactivated the Target Reconnaissance Battery in 2017.⁹

OPERATIONS

- Brazil’s first operational deployment of the Hermes 450 occurred in 2011 during Operation Agate 1, a massive counter-smuggling operation that sought to secure Brazil’s border with Colombia.¹⁰
- In 2013 the Federal Police and the Air Force together deployed the Heron 1 and Hermes 450 to San Miguel Do Iguaçu Airport to surveil Brazil’s border with Paraguay.¹¹
- In 2014 the Air Force deployed the newly-acquired Hermes 900 for security during the World Cup.¹² In 2016 and 2018, the Horus Sqn temporarily moved from Santa Maria Air Base to Santa Cruz Air Force Base near Rio de Janeiro in order to support security operations at the 2016 Rio Olympics.¹³
- In January 2019 the Horus Sqn was deployed during Operation Posse 2019, the military effort to support security operations during the inauguration of President Jair Bolsonaro.¹⁴ The operation was notable for the fact that it was the first time that the Horus Sqn flew the Hermes 900 via satellite communications.

DEVELOPMENT

- The Caçador is a Class III UAV developed by Brazilian firm Avionics Services, a subsidiary of Israel Aeronautics Industries. It is a variant of the IAI Heron 1, modified to meet the requirements of the Brazilian Ministry of Defense. Work on the Caçador began following a 2013 technology transfer agreement between Avionics Services and IAI to advance Brazil's domestic drone industry. The Caçador made its first flight at Botucatu Airport in 2016.¹⁵

OPERATIONS

- During the summer of 2018-2019, the Chilean Air Force deployed a Hermes 900 to support firefighting efforts in central and southern Chile.⁷ According to a February 2019 Air Force news release, the Hermes 900 was deployed to Quintero Air Base and Temuco Maquehue Airport and conducted 43 missions, detecting 11 fires.

TRAINING

- The Basic School for Remotely Piloted Aircraft (*La Escuela Básica de Aeronaves Remotamente Tripuladas* or EBART) is located at the 3rd Air Combat Command (CACOM-3) at Malambo Airport.¹⁴ Founded in 2014, the school trains pilots and sensor operators from the Air Force, Army, Navy, and National Police. It is equipped with ScanEagle aircraft and the Simulator for Remotely Piloted Aircraft (*Simulador de Aeronaves Remotamente Tripuladas* or SIMART) developed by CODALTEC, a Colombian defense firm.^{15,16} The school has also trained personnel from Peru and Chile. As of early 2018, EBART had trained more than 700 students in flight operations and imagery analysis, accumulating more than 1,800 flight hours on the simulators.¹⁷

OPERATIONS

- Colombia military UAV operations are largely—though not exclusively—focused on counter-narcotics and counter-insurgency operations. Some units such as the BLART at CACOM 7 were created explicitly to engage in counter-trafficking operations. In September 2018 intelligence collected by Colombian Air Force drones enabled the arrest of three men associated with Ivan Mordisco, a FARC rebel.¹⁸ Air Force drones have also been used for other missions such as monitoring traffic and road conditions.¹⁹

DEVELOPMENT

- The Quimbaya is a Class II tactical UAV developed by the Colombian Ministry of Defense and the Colombian Aeronautics Industry Corporation (CIAC). CIAC unveiled the Quimbaya in December 2018. It has a 5.24 meter wingspan, a 4.1 meter fuselage, and an endurance of up to 10 hours. As of December 2018, flight tests were scheduled to begin in early 2019.^{20,21}
- The Atlante II (also known as Atlante+) is a Class III UAV development project led by the Colombian Aeronautics Industry Corporation and Airbus Defense and Space Spain. The project originated in March 2016, when Colombia and Spain's Ministry of Defense began exploring ways of partnering on the development of a large, long-endurance aircraft based on the Airbus Atlante.²² In February 2019 Colombia and Spain signed a memorandum of understanding to begin manufacturing an Atlante II prototype. The two countries are hoping to introduce the Atlante II by 2023.²³

	Mavic ²	DJI	China	I	2019	3		
	Hovermast 150 ³	Sky Sapi-ence	Israel	I	2018	3	General Staff	

ACTIVE ACQUISITIONS

- In 2018 the Ministry of Defense announced plans to acquire 30 drones as part of a broader acquisition program designed to enhance border security.⁴ The MoD's recent acquisitions of the Hovermast 150, Matrice 210, and Mavic drones appear to be part of this effort, which is likely ongoing.

PARAGUAY

DEVELOPMENT

- The Taguato I and II are fixed-wing Class I UAVs jointly developed by the Paraguayan Air Force and the Polytechnic Faculty of the National University of Asuncion. A prototype of the Taguato I conducted its maiden flight in 2011 and was unveiled to the public in 2015.¹ Both the Taguato I and II reportedly weigh around 90 kilograms and have an operational range of 50 kilometers.² It is not clear whether these aircraft are in active service.

DEVELOPMENT

- The Peruvian Air Force's Center for Investigation and Research Projects (Centro de Investigación y Desarrollo de Proyectos or CIDEP) has been developing drones since 2010. It has produced one Class I system, the Ricuk, that is currently in service with the Air Force. The Amaru, a Class II system, may also have entered active service. Prototypes for both systems were unveiled in 2017.⁷

EGYPT

INVENTORY

Model	Make	Origin	Class	Intro	Qty	Operator	Notes
Wing Loong 1 ¹	AVIC	China	III	2016		Air Force	
RQ-20B Puma AE II ²	AeroVironment	USA	I	2019*		Army	
ASN-209 ^{3**}	Xi'an ASN Technology Group	China	II			Army	(status unclear)

*Estimate

**Licensed for domestic production by the Arab Organization for Industrialization.

ACTIVE ACQUISITIONS

- According to an October 2018 media report, Egypt reportedly purchased 32 Wing Loong I-Ds at the 2018 Zhuhai Air Show.⁴ As of this writing, this acquisition has not been verified.

INACTIVE

Model	Make	Origin	Class	Period	Qty	Operator	Notes
Scarab ⁵	Northrop Grumman	USA		1980s-1990s	56	Navy	
R4E-50 SkyEye ⁶	BAE Systems	USA		1989-Unknown		Army	(status unclear)

OPERATIONS

- Egypt has deployed Wing Loong 1 drones to the Sinai Peninsula for counter-insurgency operations against a coalition of Islamist militants and Bedouin tribesmen. According to satellite images from 2016, the Wing Loong 1s were among the first military aircraft to be deployed to Bir Gifgafa Air Base.⁷ Although there are few official statements regarding the role that drones are playing in the peninsula, satellite images and media reports have repeatedly confirmed that the Chinese-made drones are present during operations.
- Egypt may have also deployed drones along its western border for border security and counter-smuggling operations. Satellite images show Wing Loong 1s at Uthman Air Base, near the Siwa Oasis, beginning in 2016.⁸
- In addition to Bir Gifgafa and Uthman, Egypt has deployed the Wing Loong 1 to Dakhla Oasis Airport in western Egypt.⁹

INFRASTRUCTURE

Name	Country	Latitude	Longitude	Affiliation	Activity	Notes

Dakhla Oasis Airport	Egypt	25°24'40"N	29°00'10"E	Air Force	Deployment	Wing Loong 1 site

DEVELOPMENT

- Egypt has licensed the production of China's ASN-209, a fixed-wing Class II UAV. Domestic production of the ASN-209 reportedly began in 2012. Egypt presented a model of its ASN-209 (ASN-۲۰۹) at the IDEX 2018 military trade show.¹⁰

UAV Unit*, Aero-space Force of the Islamic Revolutionary Guard Corps	یگان پهپاد نیروی هوافضای سپاه	D	Mohajer-6, Shahed 123, Saegheh, Shahed 129	1985

The Iranian Revolutionary Guards Corps established the Ra'ad Reconnaissance Battalion (گردان شناسایی رعد) in 1983 or 1984 to operate UAVs.⁹ After the creation of the IRGC Aerospace Force (IRGC-AF) in 1985, the Ra'ad Battalion was transferred to the Aerospace Force and renamed the UAV Unit (یگان پهپادی). The IRGC-AF's UAV Unit is believed to encompass several subsidiary units that together operate Iran's most advanced UAVs. Following an exercise in March 2019 that featured multiple Shahed-123, Shahed-129, and Saegheh UAVs, an IRGC spokesperson said that the drones belonged to IRGC units based in the Khuzestan, Buhehr, Fars, and Hormozgan provinces.¹⁰ The IRGC-AF's UAV Unit has operational experience in Syria, where some of its members are believed to have been killed fighting in the Syrial Civil War.¹¹

UAV Unit, Ground Force of the Islamic Revolutionary Guard Corps	یگان پهپادی نیروی زمینی سپاه	D		2017
---	------------------------------	---	--	------

Mohammad Pakpour, the commander of the IRGC Ground Forces (IRGC-GF), announced in early 2017 that the IRGC-GF was establishing a UAV unit.¹² According to media reports, this unit conducted its first operation in July 2019, targeting Kurdish militants that had reportedly attacked an IRGC base in the western city of Piranshahr.¹³

**The exact name of the IRGC-AF's UAV parent organization is unclear, although it is frequently referred to in Iranian press reports as the "UAV Unit."*

ARMY

Name	HQ	Type	Equipment	Activated
Vali-e-Asr UAV Group, Army Aviation, Islamic Republic of Iran Army (Artesh)	گروه پهپادهای گروه حضرت ولیعصر عج	D	Mohajer-6	2011

The Vali-e-Asir UAV Group was created in 2011 after an Army-wide restructuring.¹⁴ According to a 2013 media report, the UAV Group is responsible for five subsidiary units that were located in different parts of the country.¹⁵ In 2015, Colonel Reza Khaki, then commander of the UAV Group, announced that subsidiary drone units had been established at every Army Aviation base in the country, though it is unclear whether this remains the case.¹⁶ The current commander of the Vali-e-Asr UAV Group is believed to be General Shahram Hassannejad. In an April 2019 interview, Hassannejad said that the group's unmanned aircraft could eventually assume responsibility for conducting all reconnaissance from manned helicopters.¹⁷ In a ceremony in July 2019, Hassannejad announced the creation of a detachment of the UAV Group at Gonabad in northeast Iran.¹⁸ The detachment is equipped with the Mohajer-6, the most advanced drone in service with the Artesh.

TRAINING

- Iranian Army Aviation opened the UAV School (دانشکده پهپاد نیروی هوایی ارتش) in June 2019 at Kushke Nosrat Airport near Qom in Qom Province. According to Iranian media report, Army Aviation is the first branch of the Iranian military to open a school dedicated to training UAV pilots.¹⁹

OPERATIONS

Country	Base	Equipment	Period	Operation
Syria	T-4 Air Base, Others	Ababil-3, Mohajer 4, Shahed 129	2012-	

Iranian drones have been spotted at various air bases in Syria since 2012. Detachments of the Iranian Revolutionary Guard Corps are believed to be responsible for drone operations in the country. Iranian media outlets published a video in 2016 that appeared to show Iranian drones striking targets in northern Syria—the first reports of an Iranian operational drone strike.²⁰ In mid-2017 U.S. fighter aircraft downed Iranian drones, including at least one Shahed-129, that the U.S. believed were threatening American-backed forces in near Al-Tanf in Homs Governorate.²¹ In early 2018 the Israeli Defense Force destroyed an Iranian Saegheh drone after it entered Israel's airspace from Syria.²² Israel responded to the incursion by carrying out an airstrike on the T-4 Air Base near Homs, Syria, where Iranian Shahed-129s were based at the time.²³

DOMESTIC OPERATIONS

- Iran has deployed drones to patrol the Persian Gulf and Gulf of Oman. At least four airfields along Iran's southwestern coast—Choghadak, Qeshm, Jask, and Konarak—support drone operations. With the exception of Jask, these facilities appear to be mostly or wholly dedicated for UAV use. Beginning in 2015 or 2016, Iranian drones began monitoring and sometimes interfering with U.S. Navy operations in the Persian Gulf.²⁴ In 2017 the U.S. Navy reported that Iranian drones were putting U.S. ships and aircraft moving through the Gulf at risk.²⁵ Iran has said that its drones would continue to patrol the Gulf.²⁶ In early 2019 Iran conducted an exercise with as many as 50 Saegheh, Shahed-123, and Shahed-129 drones in the Persian Gulf.²⁷ The aircraft took off from Qeshm Island and appeared to conduct mock airstrikes on a nearby island. In July 2019, U.S. forces aboard the amphibious assault ship USS Boxer downed an Iranian drone in the Strait of Hormuz after it, according to the U.S. Navy, came within 1,000 yards of the vessel.²⁸ The incident occurred nearly one month after Iran shot down a U.S. RQ-4 Global Hawk surveillance drone in the same area. Iran has denied that it lost a drone in the encounter.
- In the southwestern regions of Sistan and Balochistan, IRGC drones have been used in military operations against Sunni separatists. Pakistan claimed in July 2017 to have shot down an Iranian drone that had strayed across the border in what was presumed to have been a mission against these groups.²⁹

Photos posted on social media in July 2019 suggest that an Iranian Ababil-3 UAV may have crashed in in Chaghi District in Pakistan's Balochistan Province.³⁰

- Iranian drones have also been deployed to Iran's western border with Iraq. A mid-2017 satellite image revealed that Iran temporarily deployed drones to a remote airstrip near the border with Iraq.³¹ In July 2019, after Kurdish militants reportedly attacked an IRGC base in the western city of Piranshahr, the IRGC-GF's UAV Unit reportedly conducted a retaliatory operation.³²

DEVELOPMENT

- The Kaman-12 (کمان ۱۲) is a Class II fixed-wing system developed by the Army Air Force Self Sufficiency Jihad Organization, or ASF SSJO.³³ The aircraft's twin-boom design was unveiled in early 2019. According to media reports, the Kaman-12 has a 10 hour endurance and a 1,000 kilometer operational radius. The Army Air Force displayed the Kaman-12 at the National Army Day parade in Tehran on 18 April 2019.^{34,35}
- In April 2019 the Iranian Army Ground Forces unveiled the Intelligent Multirotor Bomber (مولتی روتور بمب افکن هوشمند), a Class I UAV developed by the Army Air Force Self Sufficiency Jihad Organization.³⁶ The multirotor bomber drone reportedly has a payload capacity of 8 kilograms, a 30-minute endurance, and a range of 5 kilometers.

ARMY

Name	HQ	Type	Equipment	Activated
100th Squadron, Army Aviation		Dedicated	CH-4B	2016

Originally subordinated to the Air Force and based at Al Kut Air Base in southern Iraq, the 100th transferred to Army Aviation in 2016 and appears to have relocated to Balad Air Base in around 2017 or 2018.⁶

OPERATIONS

- Iraqi Army CH-4 drones participated in operations against the Islamic State. The CH-4 carried out its first operational mission in December 2015, targeting ISIS forces with anti-tank missiles in the Battle for Ramadi.⁷ According to the Iraqi military, the CH-4s carried out 260 airstrikes against the Islamic State between 2015 and 2017.⁸

Al Kut Air Base	Iraq	32°30'20"N	45°49'29"E	Army	HQ	(status unclear)

DEVELOPMENT

- The Furat-1 is a scaled-down prototype for the Furat-3, a Class III medium-altitude long-endurance drone under development by Iraq's Najaf Technical University. It was unveiled in early 2018.⁹
- The State Company for Military Industries unveiled a Class II UAV at the IQDEX defense trade show in March 2019.¹⁰ The unnamed aircraft has a twin-boom tail and high-mounted wings. The aircraft bears a strong resemblance to Iran's Mohajem-92. In a statement to the UN security council in June 2019, an Israeli official confirmed that Iran had licensed Iraq to produce the Mohajem-92.¹¹

ACTIVE ACQUISITIONS

- The Israeli army is seeking to acquire a Class I system for organic infantry reconnaissance. According to media reports, the new aircraft will replace a fleet of DJI consumer drones, which the Army acquired on an interim basis in 2017. In March 2019 the IDF awarded CopterPix Pro a contract to develop the new system.⁷

Sky Rider Unit, Army Artillery Corps ¹²	סיימש בכור תדיחי	Camp Ramon	D	Skylark, Skylark 3	2010
The Sky Rider Unit provides the Army with battalion-level intelligence, surveillance, and reconnaissance. Although it has existed since the IDF acquired Skylarks in 2004, the IDF only recognized it as an independent unit in 2010. As of early 2018, it consisted of 20 teams of five personnel that are embedded with other Army units.					
Zik Unit, Army Artillery Corps ¹³	קז” תדיחי	Palmachim Air Base	D	Hermes 450	2001*

NAVY

Name	HQ	Type	Equipment	Activated
Naval Reconnaissance Division ¹⁴ סִי יִרְוִיסָּהָג	Palmachim Air Base	D	Heron 1	2017

The Naval Reconnaissance Division began working with the IAF's 200th Sqn to use Heron 1s to patrol Israel's maritime borders in 2009.¹⁵ In 2017 the Heron 1 replaced the manned Sea Scan (Shachaf) as the Navy's primary maritime patrol aircraft.¹⁶ Navy imagery specialists from the Naval Reconnaissance Division work with the Air Force, which owns the aircraft, to carry out each mission.

TRAINING

- Initially known as the UAV Training School, the Israeli Air Force established the RPAV Academy in 2001 at Ain Shemer Air Base.¹⁷ In 2004 the Academy was transferred to its current location at Palmachim Air Base where it provides instruction to RPAV Operators. Aircraft are borrowed from one of the active units stationed at the facility. The Academy is also equipped with simulators, which are used for approximately 30 percent of all training sorties performed there.¹⁸
- The Israeli Air Force's RPAV Division is comprised of two classes of drone pilots: RPAV External Pilots and RPAV Operators. RPAV External Pilots¹⁹ are typically enlisted personnel who are responsible for controlling the aircraft at take-off and landing, while RPAV Operators²⁰ are officers responsible for the aircraft in-flight. Air Force RPAV Operator training typically takes place in three stages. During the first phase, RPAV Operators attend the IAF Flight Academy for up to one year of basic training and instruction on aeronautical concepts. In the second phase, trainees attend the RPAV Operator Course, a six-month unmanned aircraft piloting program. In the third phase, trainees complete a three-month Operational Training Course, which is designed to familiarize students with the protocols, missions, and processes of the RPAV Division as well as the specific norms of the unit to which they are assigned.

OPERATIONS

Country	Base	Equipment	Period	Operation
Lebanon		Scout, Firebee, Chukar	1981-1982	Mole Cricket 19
In the months prior to the start of the First Lebanon War in 1982, Israeli Scouts and Firebees were used to identify Syrian fixed surface-to-air missile sites in southern Lebanon and to monitor Syrian fighter aircraft. ²¹ It was the first operational deployment for the Scout. In order to reveal the Syrian SAM and anti-aircraft batteries in Lebanon's Bekaa Valley, Israeli UAVs emitted false signals that made them appear as manned aircraft on Syrian radar feeds. One Scout, two Firebees, and two Chukars were lost.				
Lebanon		Scout, Searcher	1993	Accountability
Israeli UAVs conducted 27 sorties during Operation Accountability, a brief Israeli campaign against Hezbollah in southern Lebanon. ²²				
Lebanon		Scout, Searcher	1996	Grapes of Wrath
Israeli UAVs were deployed in the 1996 Grapes of Wrath Operation to identify Hezbollah targets in southern Lebanon. ²³				

Lebanon	Palmachim Air Base	Skylark, Searcher, Hermes 450, Heron 1	2006	Change of Direction
<p>Israel deployed drones in the Second Lebanon War to monitor friendly ground operations, locate Hezbollah rocket launchers, and verify targets for manned aircraft.²⁴ The aircraft accumulated approximately 16,500 flight hours over the course of 1,350 sorties. This operation was the first deployment of the Heron 1 and Skylark, though the majority of drone missions were conducted by Hermes 450s. Three Hermes 450s were lost in the 34-day-long operation. Most missions were conducted from Palmachim Air Base, although the IAF also deployed systems to forward operating stations in northern Israel. Press reports suggested that Operation Change of Direction also saw the first deployment of armed Israeli drones, although these reports were not confirmed by the IDF.²⁵</p>				
Palestinian Territories	Palmachim Air Base	Skylark, Searcher, Hermes 450, Heron 1, Heron TP	2008-2009	Cast Lead
<p>Israeli UAVs were a sustained presence in Operation Cast Lead, an IDF incursion in Gaza, where they were used to assist ground forces and to conduct extensive airstrikes.²⁶ Cast Lead marked the first operational missions for the Heron TP, although the drone wasn't formally inducted until 2010. A 2009 report by Human Rights Watch found that Israeli drone-launched airstrikes during the operation killed several dozen Palestinian civilians.²⁷</p>				
Palestinian Territories	Palmachim Air Base, Tel Nof Air Base	Skylark, Heron TP, Hermes 900	2014	Protective Edge
<p>The 2014 Israel-Gaza conflict, also known as Operation Protective Edge, was a 7-week-long Israeli military intervention in the Gaza Strip. Protective Edge saw the first operational deployment of the Hermes 900.²⁸</p>

MOROCCO

INVENTORY

- Media outlets reported in 2014 that France had agreed to sell Morocco three Israel Aerospace Industries Heron 1 variants known as the Harfang, which were produced in coordination with EADS.¹ A February 2016 satellite image of Ben Guerir Air Base shows a Heron 1 (or Harfang) located at the base—perhaps to conduct trials with the Air Force—but the drone did not appear in successive images.² The French Air Force, which was the original owner of the Harfangs, officially retired the aircraft in 2018.³ As of this writing, it is unclear whether Morocco still intends to acquire these aircraft or whether they are already active with the Moroccan Air Force.

Seeker 400 ¹	Denel Dynamics	South Africa	II	Mid-2010s			
CH-4B ²	CASC	China	III	2014	4	Air Force	

ACTIVE ACQUISITIONS

- The King Abdulaziz City for Science and Technology reportedly partnered in 2017 with the China Aerospace Science and Technology Corporation (CASC) to open a facility to manufacture Chinese CH-4 drones.³ The facility could also be used to maintain and repair Chinese drones flown by other countries in the Middle East. The status of this agreement is not clear.

OPERATIONS

Country	Base	Equipment	Period	Operation
Yemen	Jizan Airport	CH-4, Luna X-2000	2015-	Decisive Storm

Saudi Arabia has deployed drones in its intervention in Yemen against the Houthi group. Saudi-operated CH-4s have been spotted at both Jizan Airport and King Khalid Air Base in southwest Saudi Arabia.⁴ Several Luna X-2000 and CH-4Bs appear to have crashed or been downed in Yemen since the conflict began.^{5,6}

DEVELOPMENT

- The Saqr-1 is a Class III fixed-wing system developed by the King Abdulaziz City for Science and Technology (KACST). It was unveiled in May 2017 in Riyadh.⁸ According to KACST's Supervisor General for Special Programs, Khaled al-Hussan, the Saqr-1 is equipped with a Ka-band satellite communications capability and has a range of more than 2,500 kilometers. Footage in a promotional video released in 2017 indicated that some flight tests were conducted at Thumamah Airport north of Riyadh.⁹
- The SkyGuard is a Class II fixed-wing system developed by the Autonomous Vehicles Laboratory at the Prince Sultan Advanced Technology Research Institute (PSATRI). It was unveiled at the IDEX 2017 defense trade show.¹⁰ It has a 200-kilometer range, 10-hour endurance, and 250-kilogram MTOW. Flight tests were conducted at King Abdulaziz Military Academy Airport west of Riyadh in 2017.¹¹ A strike-capable version was displayed at the AFED 2018 defense trade show.

AIR FORCE

Name		HQ	Type	Equipment	Activated
14th UAV Systems Base Command ¹²	<i>14. İnsansız Uçak Sistemleri Üs Komutanlığı</i>	Batman Air Base	D	Heron 1, Anka, Bayraktar-TB2	

The 14th UAV Systems Base Command is likely comprised of up to three UAV Squadrons (*İHA Filo*) and a maintenance unit. The squadron that is most frequently referenced in Turkish press is the 2nd UAV Squadron (2. *İHA Filo*), which the Air Force stood up to operate the Heron.¹³

GENDARMERIE (NATIONAL MILITARY POLICE)

Name		HQ	Type	Equipment	Activated
Elazığ Tactical UAV Unit Command, Gendarmerie General Command	<i>Elazığ Taktik İha Birlik Komutanlığı, Jandarma Genel Komutanlığı</i>	Elazığ Airport	D	Bayraktar-TB2, Anka, Anka-S	

The Gendarmerie General Command (GGC) reportedly began leasing two Ankas in 2016, though it's not clear whether these remain in active service.¹⁴ The GGC took delivery of 12 Bayraktar-TB2s in early 2017 and six Bayraktar-TB2s in May 2018.^{15,16} In April 2019 the GGC took delivery of the first two of six Anka-S UAVs, a satellite-controlled variant of the Anka-B.¹⁷

NAVY

313th Naval UAV-S Unmanned Aerial Vehicle Fleet Command	<i>313. Deniz İHA-S İnsansız Hava Aracı Filo Komutanlığı</i>	Çanakkale Airport	D	Bayraktar-TB2, Anka	2018

The Naval Air Command (*Deniz Hava Komutanlığı*) activated the 313th UAV Fleet Command in August 2018.¹⁸ Turkish Navy UAVs are based at both Çanakkale Airport and Dalaman Naval Air Base.¹⁹ According to media reports, the Navy's Bayraktar-TB2s became operational in December 2018.²⁰

OPERATIONS	Country	Base	Equipment	Period	Operation
	Syria	Batman Air Base	Bayraktar-TB2	2016-	Euphrates Shield, Olive Branch
<p>Turkey has deployed drones for operations in northern Syria.²¹ In Operation Euphrates Shield, the Turkish military supported Syrian opposition forces in a cross-border campaign against the Islamic State. In Operation Olive Branch, the Turkish military and allied forces launched a campaign in January 2018 to take territory held by Kurdish militias. Several months into Olive Branch, Turkey claimed that over its Bayraktar-TB2s had killed over 400 members of Kurdish militias in 382 sorties in the operation.²² Several Bayraktar-TB2s have been lost in Syria.²³</p>					
	Iraq		Bayraktar-TB2	2019-	Claw
<p>According to a statement and video released by the Turkish MoD in May 28, Bayraktar-TB2s have been involved in Operation Claw, a Turkish retaliatory operation against Kurdish militias in northern Iraq in 2019.²⁴</p>					

DOMESTIC OPERATIONS

- Since 2016, Turkey has extensively used drones in strikes against Kurdistan Workers' Party (PKK) militants in southeast Turkey.^{25, 26} These operations are likely conducted by the Gendarmerie, the Turkish military police, using Bayraktar-TB2s operated from a network of airports, including Elâzığ Airport, Van Ferit Melen Airport, and Şırnak Şerafettin Elçi Airport.²⁷ Operations are also likely conducted at Hakkari Yüksekova Airport and Gaziantep Airport. Turkey has been criticised for using drones to target Kurdish civilians with airstrikes.²⁸
- The Turkish Navy has deployed Anka drones to Dalaman Air Base and Bayraktar-TB2s to Çanakkale Airport and Dalaman. In April 2018, Greek Air Force fighters intercepted a Turkish Anka near the island of Rhodes, some 50 kilometers from Dalaman Air Base.²⁸ In 2019, Turkish Navy Bayraktar-TB2s provided surveillance for the *Fatih*, a drillship operating off the coast of Cyprus in the eastern Mediterranean.²⁹

DEVELOPMENT

- The Akıncı is a Class III fixed-wing UAV developed by Baykar Makina. It was unveiled in 2018.³⁰ The Akıncı's design is notable for its twin engines and gull wings. At approximately 5 tons, it will be Turkey's heaviest unmanned aircraft. In a promotional video released in May 2019, Baykar Makina indicated that the Akıncı could be capable of launching swarms of Alpagu loitering munitions.³¹ It is scheduled to begin flight tests in 2019, with production slated to begin in 2020 and deliveries commencing in 2021.
- The Anka-Aksungur, also known as the Anka-2, is a Class III fixed-wing UAV developed by Turkish Aerospace Industries. This twin-engine, twin-tailed system was unveiled in January 2019 and conducted its first flight at Akıncı Airport in March 2019.³² According to TAI, the Anka-Aksungur will have a payload of over 700 kilograms, more than three times that of the Anka.

**Estimate*

*** Licensed for production by the UAE’s Abu Dhabi Autonomous Systems Investments*

ACTIVE ACQUISITIONS

- The UAE has requested to buy 20 Insitu RQ-21 Blackjack aircraft from the United States.⁶ The proposed sale, which includes associated equipment such as ground control stations, amounts to approximately \$80 million. In May 2019 the U.S. State Department approved the sale as part of a broader arms deal with the UAE, Saudi Arabia, and Jordan.⁷ The deal is opposed by some members of Congress who are against the continuation of U.S. support for the Saudi-led war in Yemen and who may act to prevent the arms deal from going through.

OPERATIONS

Country	Base	Equipment	Period	Operation
Afghanistan		Seeker 200	2009	Enduring Freedom (US)
The UAE deployed a Seeker II to assist British operations in Helmand Province in 2009. ⁸				

Yemen	Assab Airport	Seeker 200, Wing Loong I, Wing Loong II, Predator XP	2015-	Decisive Storm
<p>The UAE deployed several drones as part of the Saudi-led intervention in Yemen. In 2015, a Seeker II, likely belonging to the UAE, was shot down in Yemen.⁹ In 2017 and 2018, both the Wing Loong 1 and 2 were deployed to Assab Airport, a UAE-operated base in Eritrea.¹⁰ It was the first operational deployment for the UAE's Wing Loong 1s and 2s. According to satellite images, it appears as though an Emirati-operated Predator XP was based at Jizan Airport in Saudi Arabia in 2018.¹¹</p>				
Libya	Al Khadim Air Base	Wing Loong I, Camcopter S-100	2016-	
<p>The UAE has deployed Wing Loong Is to Libya in support of the Libyan National Army, a faction that controls the eastern part of the country. The UAE renovated an air base east of Benghazi in Marj province to host the drones and other manned aircraft.¹² Uthman Air Base in Egypt may also have served as a forward base for Emirati aircraft.</p>

ACTIVE ACQUISITIONS

- The Royal Canadian Air Force (RCAF) is evaluating options for a strike-capable Class III system under the banner of the Remotely Piloted Aircraft Systems (RPAS) procurement project. The Canadian military began to express an interest in a Class III capability in 2000 with the launch of the Joint Unmanned Surveillance and Target Acquisition System (JUSTAS).⁴ Although the original schedule anticipated that the aircraft would be delivered by 2012, the JUSTAS program was stalled until 2016 due to disagreements over requirements and cost as well as public pushback against the idea. In 2016, the Canadian military released a new request for information, signalling a renewed interest in a Class III UAV capability. In 2017 the government's "Strong, Secure, Engaged" defense strategy called for the procurement of strike drones for the Air Force.⁵ Later that year, the JUSTAS program was renamed the RPAS project. The main competitors for this requirement are General Atomics Aeronautical Systems and Israel Aerospace Industries. Both companies announced partnerships with Canadian firms in 2018 to submit bids for the project.⁶ According to an updated request for information released in April 2019, the RCAF will continue to refine the requirements for the system until it issues a request for proposals in 2021.⁷ It intends to award a contract for the RPAS project by 2023 and begin taking deliveries by 2025.⁸
- Canada has reportedly submitted a bid to purchase an RQ-4 Global Hawk that served as the prototype for the German military's EuroHawk program, which was cancelled in 2013 due to cost overruns.⁹ Canada is considering using the aircraft to surveil its remote Arctic territories. According to media reports, this program may be led by Canada's transportation ministry.¹⁰

PERSONNEL

ARMY

Name	HQ	Type	Equipment	Activated
4th Artillery Regiment (General Support), Canadian Combat Support Brigade ^{16,17}	CFB Gagetown	P	RQ-21A Blackjack	2014
The 4th Air Defense Regiment (4th AD Regt) began operating drones in 2003 with the acquisition of the Sperwer. In 2014, the 4th AD Regt merged with the 4th Field Regiment Self-Propelled to form the 4th Artillery Regiment General Support, or 4 Regt (GS). In 2017, the 4th Regt (GS) assumed responsibility for the RQ-21A Blackjack. In addition to drones, the 4th Regt (GS) also operates radar systems.				

OPERATIONS

Country	Base	Equipment	Period	Operation
Afghanistan	Multiple	Multiple	2003-2011	Enduring Freedom
The Canadian Armed Forces deployed the Sperwer to Kabul, Afghanistan in October 2003, marking Canada's first operational UAV deployment. ¹⁸ The 2nd Royal Canadian Horse Artillery and the 4th Air Defense Artillery Regiment (4 AD Regt) were initially responsible for these operations. In 2006 the 4 AD Regt partnered with the Air Force's 408 Tactical Helicopter Squadron to operate the Sperwer from Kandahar Air Base. Canada withdrew the Sperwer from Afghanistan in 2009 and retired the aircraft from service. In 2008 and 2009, Canadian forces introduced leased ScanEagles and Herons for its operations in the country. ¹⁹ The deployment of these new systems was driven in part by the Manley report, a January 2008 assessment of Canada's force structure in Afghanistan which determined that Canadian Forces urgently needed a persistent, high-performance UAV in theater. ²⁰ To operate the ScanEagle, the Army activated the Small UAV Troop, 4th Air Defense Artillery Regiment, which deployed to Afghanistan in September 2008. The Air Force's Heron UAV Detachment, also known as Task Force Erebus, deployed to Kandahar in early 2009. The Air Force and Army withdrew their ScanEagles and Herons from Afghanistan in 2011 following the end of Canada's combat mission. Over the course of the deployment, Canadian Forces in Afghanistan were also variously equipped with the Class I drones such as the Silver Fox, Skylark, and Maveric.				

Mediterranean	ScanEagle	2012-2014	Metric (CA)
---------------	-----------	-----------	-------------

Between 2012 and 2014, the Royal Canadian Navy and Army jointly deployed ScanEagles in Operation Metric, the Canadian contribution to Operation Active Endeavor, a NATO-led maritime security and counter-terrorism operation in the Mediterranean Sea.²¹ The aircraft, which were operated by small team of specialists from the Army's 4th Air Defense Artillery Regiment, were deployed on board the *HMCS Charlottetown* (2012), *HMCS Toronto* (2013), and *HMCS Regina* (2014).

601st Air Squadron ^{7,8}	<i>Escuadrón Aéreo 601</i> Air Station No. 9 Atlangatepec	D	Hermes 450, S4 Ehécatl, G1 Guerrero	2010

Formerly the Unmanned Aircraft Systems Squadron (Escuadrón de Sistemas Aéreos No Tripulados), the 601st is reportedly comprised of approximately 250 personnel. Since 2010 it has supported the Secretariat of Defense's Command and Control Center of the Integrated Air Surveillance System (Centro de Mando y Control del Sistema Integrado de Vigilancia Aérea).

TRAINING

- The Mexican Navy created the Center for Training in Unmanned Aerial Systems (Centro de Capacitación de Sistemas Aéreos No Tripulados or CENCASANT) at the Heroica Escuela Naval Militar, the service's officer training academy in Veracruz, in 2015. The Center offers a six-month training course for the positions of Mission Coordinator, Pilot, and Maintenance Technician. In July 2017 the Center graduated 26 students in these fields, some of whom came from other government agencies besides the

Navy.⁹**OPERATIONS**

- The Mexican military has deployed its unmanned aircraft for counter-drug, counter-piracy, and border security operations. In the 2017 National Development Plan, the Mexican Air Force reported that its unmanned aircraft—the Hermes 450, S4 Ehécatl, and G1 Guerrero—had accumulated 2,780 flight hours during the 2017 calendar year in these roles.¹⁰

DEVELOPMENT

- The *Sistema de Patrullaje Autónomo y de Reconocimiento Táctico Aéreo de la Armada de México* (SPARTAAM) is a Class I UAV designed by the Mexican Navy's Institute of Research and Technological Development (INIDETAM). The drone is designed to assist search and rescue and disaster relief operations. The Mexican Navy announced in July 2018 that it would begin production of the SPARTAAM with the goal of equipping three dedicated teams with the system.¹¹

ACTIVE ACQUISITIONS

- The Army's Future Tactical Unmanned Aerial System (FTUAS) program is evaluating potential replacements for the RQ-7 Shadow. The Army is seeking an aircraft that, unlike the RQ-7 Shadow, does not need a runway for launch or recovery, unlike the Shadow.¹ The Army selected Martin UAV and Textron Systems' AAI Corporation to compete to provide the FTUAS systems in March 2019.² The Army awarded both companies \$99.5 million indefinite delivery, indefinite quantity contracts to produce demonstrator aircraft—the Martin UAV VBAT and Textron AAI Aerosonde HQ—that will be fielded with six TUAS Platoons for testing and evaluation. The Army expects to begin the formal acquisition process for the FTUAS in 2021, though this may change depending on the results of these tests.³
- The Army's Short Range Reconnaissance (SRR) UAS program (previously known as Short Range Micro) is evaluating a low-cost, backpackable Class I UAV for platoon and company-level units. According to desired specifications published in November 2018, it should weigh no more than 1.36 kilograms and have a 30 minute flight endurance.⁴ In April 2019, the U.S. Defense Innovation Unit and the Army awarded six companies—Parrot, Skydio, Altavian, Teal Drones, Vantage Robotics, and Lumenier—con-

tracts to develop drones for the SRR program.⁵

- The Army's Soldier Borne Sensor (SBS) is a program aimed at outfitting every Army squad with an ultra-portable, backpackable drone. In May 2018 the Army awarded FLIR an initial \$2.6 million contract for 60 Black Hornet III micro-drones under the program, and then another \$39.6 million in January 2019.^{6,7} Although FLIR did not disclose the exact number of Black Hornets the Army intends to acquire under the second contract, the quantity is estimated at around 2,000 based on Army budget documents. Ultimately, the Army could acquire as many as 7,000 systems under the SBS program, although it is not certain as of this writing that all of these will be Black Hornets.⁸
- The Marine Corps' Marine Air-Ground Task Force UAS Expeditionary program (MUX) is evaluating the acquisition of a Class III high-altitude long-endurance system with a range of 350 to 700 nautical miles and an endurance of up to 48 hours, capable of deploying on board helicopter-capable amphibious ships. In 2018 the Marines began refining the requirements for the MUX and intends to select a prototype aircraft in Fiscal Year 2020 for testing and evaluation.⁹ In its Fiscal Year 2020 budget, the Navy and Marine Corps announced that it would procure several MQ-9 Reapers, which could help prepare the Corps for acquiring and operating a future MUX system.¹⁰
- The Navy's Carrier Based Aerial Refueling System (CBARS) is a program to acquire an aircraft carrier-based refueler drone that could extend the operational range of manned fighter jets. The Navy unveiled the concept in 2016, designating the system as the MQ-25 Stingray.¹¹ In 2018, after a competition between Boeing, General Atomics Aeronautical Systems, and Lockheed Martin, the Navy selected Boeing's design, awarding it an \$805 million contract for an initial four aircraft.¹² The Navy is intending to continue to develop and test the Stingray until 2024, when it hopes to be able to make an initial operational capability decision. Meanwhile, according to a March 2019 media report, the Air Force may also be considering acquiring a similar unmanned aircraft to replace some of its manned tankers.¹³
- Beginning in Fiscal Year 2019, the Air Force launched a small program to procure the RQ-20B Puma. The Air Force intends to acquire a total of 111 systems—approximately 222 aircraft—through Fiscal Year 2024. The Pumas are expected to be used for base perimeter security.¹⁴
- The Air Force's Low-Cost Attritable Strike Demonstrator is a program to develop an unmanned aircraft that is capable of accompanying fighter aircraft. A June 2019 media report indicated that the Air Force may acquire another 20 to 30 Valkyries in the coming years in an effort to accelerate the development of this system.¹⁵ See page 245 for more information.

PERSONNEL

AIR FORCE

- The following tables reflect the Air Force units that are responsible for piloting the RQ-4 Global Hawk and MQ-9 Reaper. An undisclosed number of Air Force units are variously equipped with Class I drones.¹⁸ The Air Force's Special Tactics Teams and the Security Forces are equipped with the RQ-11B Raven, RQ-20 Puma, and RQ-12 Wasp.¹⁹ Air Force civil engineer squadrons are incorporating the SkyRanger into the Rapid Airfield Damage Assessment System, an effort to use various manned and unmanned systems to assess and repair base infrastructure.²⁰

Name	HQ	Type	Equipment	Activated
1st Reconnaissance Squadron, 9th Operations Group, 9th Reconnaissance Wing, Air Combat Command	Beale AFB	P	RQ-4 Global Hawk	2002
Formed in 1913 as the 1st Provisional Aero Squadron, the 1st Reconnaissance Sqn today provides initial pilot training for the RQ-4 Global Hawk and the manned U-2 Dragon Lady. ²¹ It is the oldest flying unit in the U.S. military.				
12th Reconnaissance Squadron, 69th Reconnaissance Group, 9th Reconnaissance Wing, Air Combat Command	Beale AFB	D	RQ-4 Global Hawk	2001
Formed in 1917 as the 12th Aero Squadron, the 12th served in various capacities until 1992 when it was deactivated. ²² It was reactivated in 2001 as the first unit to operate the Global Hawk and participated in Operations Enduring Freedom (Afghanistan) and Iraqi Freedom. In 2017 the 12th became one of the first two units since 1942 to allow enlisted (non-officer) airmen to fly aircraft in operational sorties. ²³				
7th Reconnaissance Squadron, 69th Reconnaissance Group, 9th Reconnaissance Wing, Air Combat Command	NAS Sigonella	D	RQ-4 Global Hawk	2015
Formed in 1917 as the 7th Aero Squadron, the 7th was deactivated in 1946. It was reactivated in March 2015 as the 7th Reconnaissance Squadron and equipped with the Global Hawk. ²⁴ It is based in Sicily and, as of 2016, is comprised of 85 active duty and 67 civilian personnel.				
348th Reconnaissance Squadron, 69th Reconnaissance Group, 9th Reconnaissance Wing, Air Combat Command	Grand Forks AFB	D	RQ-4 Global Hawk	2011
Formed in 1942 as the 348th Bombardment Squadron, the 348th was deactivated in 1973. It was reactivated in 2011 as the 348th Reconnaissance Squadron and tasked with conducting Global Hawk operations. ²⁵				

6th Attack Squadron, 49th Operations Group, 49th Wing, Nineteenth Air Force, Air Educa- tion and Training Command	Holloman AFB	D	MQ-9 Reaper	2009
---	--------------	---	----------------	------

The 6th Attack Sqn provides pilot and sensor operator training for the MQ-9 Reaper. As of early 2017, it had trained 752 pilots and 544 sensor operators. It transitioned from the Predator to the Reaper in 2017.²⁶

9th Attack Squadron, 49th Operations Group, 49th Wing, Nineteenth Air Force, Air Educa- tion and Training Command	Holloman AFB	D	MQ-9 Reaper	2009
---	--------------	---	----------------	------

Formed in 1941 as the 9th Fighter Squadron, the Air Force redesignated the 9th in 2012 as the 9th Attack Squadron in 2012 and tasked it with training new Reaper pilots and sensor operators.²⁷

29th Attack Squadron, 49th Operations Group, 49th Wing, Nineteenth Air Force, Air Educa- tion and Training Command	Holloman AFB	D	MQ-9 Reaper	2009
--	--------------	---	----------------	------

Formed in 1942 as the 13th Observation Squadron, the 29th was reactivated in 2009 after a period of inactivity. It is responsible for training Reaper pilots and sensor operators.²⁸

26th Weapons Squadron, 57th Wing, Air Com- bat Command	Nellis AFB	D	MQ-9 Reaper	2008
---	------------	---	----------------	------

Formed in 1940 as the 26th Pursuit Squadron, the 26th was reactivated as the 26th Weapons Squadron in 2008 after a period of inactivity.²⁹ As a part of the Weapons School at Nellis Air Force Base, the 26th provides specialized combat training to Reaper sensor operators in a program called the Weapons Officer and Sensor Operator Advanced Tactics Course.³⁰

11th Attack Squadron, 432nd Operations Group, 432nd Wing, Air Combat Command	Creech Air Force Base	D	MQ-9 Reaper	1995
---	--------------------------	---	----------------	------

Formed in World War II, the 11th Sqn began operating drones in the 1970s. After a period of inactivity in the 1980s, the Air Force redesignated the unit in 1995 as the 11th Reconnaissance Squadron and equipped it with the MQ-1 Predator, becoming the first Air Force unit to operate the Predator.³¹ In 2016 the Air Force equipped it with the Reaper and redesignated it as the 11th Attack Squadron.³²

15th Attack Squadron, 432nd Operations Group, 432nd Wing, Air Combat Command	Creech Air Force Base	D	MQ-9 Reaper	1997
---	--------------------------	---	----------------	------

Formed in May 1917 as the 2nd Aviation School Squadron, the 15th began operating drones in 1997.³³ It was redesignated the 15th Reconnaissance Sqn and equipped with the MQ-1 Predator, the second Air Force squadron after the 11th Sqn to operate the Predator. It transitioned to the Reaper in 2016, becoming the 15th Attack Sqn.

20th Attack Squadron, 432nd Operations Group, 432nd Wing, Air Combat Command	Whiteman AFB	D	MQ-9 Reaper	2011
--	--------------	---	-------------	------

Formed in 1940 as the 20th Transport Squadron, the 20th began operating drones in 2011 when it was redesignated as the 20th Reconnaissance Sqn and equipped with the MQ-1 Predator.³⁴ It transitioned to the Reaper in 2016, becoming the 20th Attack Sqn.³⁵

42nd Attack Squadron, 432nd Operations Group, 432nd Wing, Air Combat Command	Creech AFB	D	MQ-9 Reaper	2006
--	------------	---	-------------	------

Formed in 1917 as the 42nd Aero Squadron, the 42nd began operating drones in 2006, when it was equipped with the MQ-9 Reaper and redesignated the 32nd Attack Squadron.³⁶ It was the first Air Force unit activated to operate the Reaper.³⁷

89th Attack Squadron, 432nd Operations Group, 432nd Wing, Air Combat Command	Ellsworth AFB	D	MQ-9 Reaper	2011
--	---------------	---	-------------	------

Formed as the 89th Aero Squadron in 1917, the 89th began operating drones in 2012. It was redesignated the 89th Attack Sqn in 2016.^{38,39}

489th Attack Squadron, 432nd Operations Group, 432nd Wing, Air Combat Command	Creech AFB	D	MQ-9 Reaper	2016
---	------------	---	-------------	------

Formed as the 77th Aero Squadron in 1917, the 489th began operating drones in 2016, when it was tasked with remotely operating the MQ-1 Predator and MQ-9 Reaper.⁴⁰ Personnel from the 489th operated the final Air Force MQ-1 Predator flight in 2018 before the aircraft was decommissioned.⁴¹

17th Attack Squadron, 732nd Operations Group, 432nd Wing, Air Combat Command	Creech AFB	D	MQ-9 Reaper	2002
--	------------	---	-------------	------

Formed as the 17th Photographic Reconnaissance Squadron in 1942, the 17th began operating drones in 2002, when it was equipped with the MQ-1 Predator and redesignated the 17th Reconnaissance Sqn.⁴² It transitioned to the Reaper in 2007, becoming the 17th Attack Sqn.

22nd Attack Squadron, 732nd Operations Group, 432nd Wing, Air Combat Command	Creech AFB	D	MQ-9 Reaper	2012
--	------------	---	-------------	------

Formed as the 46th Bombardment Squadron in 1940, the 22nd began operating drones in 2012, when it was equipped with the MQ-9 Reaper.⁴³

30th Reconnaissance Squadron, 732nd Operations Group, 432nd Wing, Air Combat Command	Creech AFB	D	RQ-170 Sentinel	
--	------------	---	-----------------	--

The 30th Reconnaissance Squadron has operated the secretive RQ-170 reconnaissance drone since at least 2011.^{44,45}

44th Reconnaissance Squadron, 732nd Operations Group, 432nd Wing, Air Combat Command	Creech AFB	D		2015
--	------------	---	--	------

Formed as the 44th Aero Squadron in 1917, the 44th began operating drones in 2015 when it was reactivated to operate a classified unmanned aircraft.⁴⁶ The exact type of aircraft and mission of this unit is not known.⁴⁷

867th Attack Squadron, 732nd Operations Group, 432nd Wing, Air Combat Command	Creech AFB	D	MQ-9 Reaper	2012
---	------------	---	-------------	------

Formed as the 92nd Aero Squadron in 1917, the 867th began operating drones in 2012. It is believed to be equipped with the MQ-9 Reaper.^{48,49}

50th Attack Squadron, 25th Attack Group, 432nd Wing, Air Combat Command	Shaw AFB	D	MQ-9 Reaper	2018
---	----------	---	-------------	------

Formed as the 50th Aero Squadron in 1917, the 50th began operating drones in 2018 when the Air Force reactivated the unit to operate the MQ-9 Reaper. It is subordinated to the 25th Attack Group, which was also stood up in 2018.⁵⁰

482nd Attack Squadron, 25th Attack Group, 432nd Wing, Air Combat Command	Shaw AFB	D	MQ-9 Reaper	2018
--	----------	---	-------------	------

Formed as the 70th Aero Squadron in 1917, the Air Force activated the 482nd as an MQ-9 Reaper squadron in 2018. It is subordinated to the 25th Attack Group, which was also stood up in 2018.⁵¹

78th Attack Squadron, 726th Operations Group, 926th Wing, Air Force Reserve Command	Creech AFB	D	MQ-9 Reaper	2006
---	------------	---	-------------	------

Formed as the 78th Aero Squadron in 1918, the Air Force Reserve Command reactivated the unit as the 78th Reconnaissance Squadron in 2006 to conduct UAV operations.⁵² The 78th Sqn provides reservist UAV pilots and sensor operators to active-duty units with the 432nd Wing. It was redesignated the 78th Attack Sqn in 2010.

91st Attack Squadron, 726th Operations Group, 926th Wing, Air Force Reserve Command	Creech AFB	D	MQ-9 Reaper	2013
---	------------	---	-------------	------

The Air Force Reserve Command activated the 91st Attack Squadron in 2013 to conduct UAV operations.⁵³ Like the 78th Attack Squadron, the 91st provides reservist UAV pilots and sensor operators to active-duty units with the 432nd Wing.

13th Reconnaissance Squadron, 726th Operations Group, 926th Wing, Air Force Reserve Command	Beale Air Force Base	D	RQ-4 Global Hawk	2005
---	----------------------	---	------------------	------

Formed as the 13th Photographic Reconnaissance Squadron in 1942, the 13th began operating drones in 2005, when the Air Force Reserve Command activated it to operate the Global Hawk.⁵⁴ The 13th provides reservist UAV pilots and sensor operators to active-duty units with the 9th Reconnaissance Wing.

429th Attack Squadron, 726th Operations Group, 926th Wing, Air Force Reserve Command	Holloman AFB	D	MQ-9 Reaper	2013
--	--------------	---	-------------	------

Formed in 1917 as the 41st Aero Squadron, the 429th was reactivated in 2013 to support MQ-1 and MQ-9 Reaper training at Holloman Air Force Base.⁵⁵

AIR FORCE NATIONAL GUARD

Name	HQ	Type	Equipment	Activated
------	----	------	-----------	-----------

136th Attack Squadron, 107th Operations Group, 107th Attack Wing, New York Air National Guard	Niagara Falls Air Reserve Station	D	MQ-9 Reaper	2017
---	-----------------------------------	---	-------------	------

Although it began operating drones in 2014, the 136th Squadron formally transitioned from flying the manned C-130 Hercules transport aircraft to the MQ-9 Reaper in 2017, becoming the 136th Attack Squadron.^{56,57}

110th Air Operations Group, 110th Wing, Michigan Air National Guard	Battle Creek Air National Guard Base	D	MQ-9 Reaper	2015
---	--------------------------------------	---	-------------	------

The 110th Wing transitioned from the C-21 Learjet to the MQ-9 Reaper in 2015.⁵⁸

103rd Attack Squadron, 111th Operations Group, 111th Attack Wing, Pennsylvania Air National Guard ⁵⁹	Horsham Air National Guard Station	D	MQ-9 Reaper	2016
---	------------------------------------	---	-------------	------

118th Operations Group, 118th Wing, Tennessee Air National Guard	Berry Field Air National Guard Base	D	MQ-9 Reaper	2012
--	-------------------------------------	---	-------------	------

The 118th transitioned from flying the C-130 Hercules transport aircraft to the MQ-9 Reaper in 2012.⁶⁰

178th Attack Squadron, 119th Operations Group, 119th Wing, North Dakota Air National Guard	Fargo Air National Guard Base	D	MQ-9 Reaper	2007
--	-------------------------------	---	-------------	------

The 119th Wing transitioned from flying the F-16 fighter to the MQ-1 Predator in 2007.^{61,62,63}

124th Attack Squadron, 132d Operations Group, 132d Wing, Iowa Air National Guard ⁶⁴	Des Moines Air National Guard Base	D	MQ-9 Reaper	2017
--	------------------------------------	---	-------------	------

111th Attack Squadron, 147th Operations Group, 147th Attack Wing, Texas Air National Guard	Ellington Field Joint Reserve Base	D	MQ-9 Reaper	2008
--	------------------------------------	---	-------------	------

Formed as the 111th Observation Squadron in 1923, the 111th began flying the MQ-1B Predator in 2008 as the 11th Reconnaissance Squadron.^{65,66} In 2015 the 111th had accumulated 100,000 combat flight hours with the Predator.⁶⁷ It transitioned to flying the Reaper in 2017, becoming the 111th Attack Squadron.⁶⁸

196th Attack Squadron, 163rd Operations Group, 163rd Attack Wing, California Air National Guard	March Air Reserve Base	D	MQ-9 Reaper	2006
---	------------------------	---	-------------	------

The 163rd Wing transitioned from flying the KC-135 to the MQ-1B Predator in 2006, becoming the first Air National Guard unit to fly the Predator.⁶⁹ It was redesignated the 163rd Attack Wing in 2015 after transitioning to the MQ-9 Reaper.

178th Operations Group, 178th Wing, Ohio Air National Guard	Springfield Air National Guard Base	D	MQ-9 Reaper	2014
---	-------------------------------------	---	-------------	------

The 178th formally transitioned from flying the F-16 Falcon fighter jet to the MQ-1B Predator in 2014, becoming the 178th Wing. It transitioned from the Predator to the MQ-9 Reaper in 2017.⁷⁰

214th Attack Squadron, 214th Attack Group, 162d Wing, Arizona Air National Guard	Davis-Monthan Air Force Base	D	MQ-9 Reaper	2007
--	------------------------------	---	-------------	------

The 214th began operating the MQ-1 Predator in 2007. It transitioned to the Reaper in 2014, becoming the 214th Attack Group.⁷¹

138th Attack Squadron, 174th Attack Wing, New York Air National Guard	Hancock Field Air National Guard Base	D	MQ-9 Reaper	2012
The 174th Wing began transitioning from the F-16 Fighting Falcon to the MQ-9 Reaper in 2009, when it was still known as the 174th Fighter Wing. It was redesignated the 174th Attack Wing in 2012. ⁷²				
184th Attack Squadron, 188th Operations Group, 188th Wing, Arkansas Air National Guard ⁷³	Ebbing Air National Guard Base	D	MQ-9 Reaper	2015

NAVY

- The Navy's Helicopter Marine Strike (HSM) and Helicopter Sea Combat (HSC) squadrons are responsible for operating the MQ-8 Fire Scout. These units, which typically fly the manned MH-60 helicopter, are equipped with the Fire Scout for deployments on board air-capable ships such as the Littoral Combat Ship.⁷⁴ In addition to the three units below, other Navy HSM and HSC squadrons may deploy with the Fire Scout on a regular basis.

Name	HQ	Type	Equipment	Activated
Unmanned Patrol Squadron One Nine (VUP-19), Patrol and Reconnaissance Wing 11 ⁷⁵	NAS Jacksonville, NB Ventura County	D	MQ-4C Triton	2013
Air Test and Evaluation Squadron 24 (UX-24) ⁷⁶	Webster Outlying Field	D	MQ-8C Fire Scout	2018
Helicopter Marine Strike Squadron 35 "Magicians" (HSM-35) ⁷⁷	NAS North Island	P	MQ-8B Fire Scout	2013

MARINES

Name	HQ	Type	Equipment	Activated
Marine Unmanned Aerial Vehicle Squadron 1 (VMU-1), Marine Aircraft Group 13, 3rd Marine Aircraft Wing	Marine Corps Air Station Yuma	D	RQ-21A Blackjack, MQ-9	1994
The Marine Corps activated VMU-1 in 1994 after merging the 1st and 3rd Remotely Piloted Vehicle Companies, both of which had been active since the early 1990s. ⁷⁸ VMU-1 was equipped with the RQ-2 Pioneer until 2007, when it transitioned to the RQ-7 Shadow. ⁷⁹ It transitioned to the RQ-21A Blackjack in 2016. The Marine Corps intends to establish a detachment of VMU-1 equipped with the MQ-9 Reaper by 2021. ⁸⁰				
Marine Unmanned Aerial Vehicle Squadron 2 (VMU-2), Marine Aircraft Group 14, 2nd Marine Aircraft Wing	Marine Corps Air Station Cherry Point	D	RQ-21A Blackjack	1986

Formed in 1984 as Detachment 1, Target Acquisition Battery, 10th Marine Regiment, 2nd Marine Division and equipped with the Mastiff, VMU-2 was the first Marine unit established to operate drones.⁸¹ It was reorganized into the 2nd Remotely Piloted Vehicle Company in 1986 and transitioned to operating the Pioneer the following year. In 1996 it was redesignated the Marine Unmanned Aerial Vehicle Squadron 2 (VMU-2). Since 2000, it has been subordinated to the 2nd Marine Aircraft Wing. In 2008, VMU-2 transitioned from the Pioneer to the Shadow and ScanEagle. It has been equipped with the Blackjack since 2016.

Marine Unmanned Aerial Vehicle Squadron 3 (VMU-3), Marine Aircraft Group 24, 1st Marine Aircraft Wing	Marine Corps Air Station Kaneohe Bay	D	RQ-21A Blackjack	2008
---	--------------------------------------	---	------------------	------

Formed in 2008 at Twentynine Palms, California, VMU-3 has been equipped with the RQ-7 Shadow, ScanEagle, and Aerosonde. It relocated to MCAS Kaneohe Bay in 2014 and transitioned to the RQ-21A Blackjack in 2018.⁸²

Marine Unmanned Aerial Vehicle Squadron 4 (VMU-4), Marine Aircraft Group 41, 4th Marine Aircraft Wing	Camp Pendleton	D	RQ-21A Blackjack	2010
---	----------------	---	------------------	------

VMU-4 was the first Marine reserve unit created to operate drones. It transitioned from the Shadow to the Blackjack in 2018.⁸³

ARMY

- The U.S. Army has at least 11 units equipped with the MQ-1C Gray Eagle. These units are organized into companies, most of which are attached to Army Aviation Regiments that are subordinated to Army Divisions. Some Military Intelligence Brigades and Special Operations Command Groups (listed here in the “Special Forces” section”) also have MQ-1C Gray Eagle companies. A typical MQ-1C Gray Eagle company within an Army Aviation Regiment contains 12 aircraft and 125 personnel that are organized into three platoons.⁸⁴
- The U.S. Army has fielded at least 30 and as many as 60 units equipped with the RQ-7 Shadow. These units are typically organized into platoons and subordinated to Brigade Engineering Battalions, which are themselves subordinated to Brigade Combat Teams. Within a typical Brigade Engineering Battalion, the battalion’s intelligence company (D Company) is responsible for RQ-7 Shadow operations. Known alternatively as “Detachment 1” or as the “TUAS Platoon,” the RQ-7 Shadow unit usually consists of 22 personnel, four aircraft, two unmanned ground control stations, and other associated supporting systems.⁸⁵ The Army is in the process of acquiring a replacement for the Shadow, which could result in organizational changes.

Name	HQ	Type	Equipment	Activated
F Company, 2nd Battalion, 227th Aviation Regiment, 1st Air Cavalry Brigade, 1st Cavalry Division, III Corps ⁸⁶	Fort Hood	D	MQ-1C Gray Eagle	2011

SPECIAL OPERATIONS

Name	HQ	Type	Equipment	Activated
3rd Special Operations Squadron, 27th Special Operations Group, Air Force Special Operations Command ¹³¹	Cannon Air Force Base	D	MQ-9 Reaper	2005
Formed as the Photographic Section No. 1 in 1918, the 3rd Special Operation Squadron began operating the MQ-1 Predator in 2005.				
12th Special Operations Squadron, 27th Special Operations Group, Air Force Special Operations Command ¹³²	Cannon Air Force Base	D	MQ-9 Reaper	2015
33rd Special Operations Squadron, 27th Special Operations Group, Air Force Special Operations Command ¹³³	Cannon Air Force Base	D	MQ-9 Reaper	2009

65th Special Operations Squadron, 1st Special Operations Group, Air Force Special Operations Command ¹³⁴	Hurlburt Field	D	MQ-9 Reaper	2018
2nd Special Operations Squadron, 919th Operations Group, Air Force Reserve Command ¹³⁵	Hurlburt Field	D	MQ-9 Reaper	2009
E Company, 160th Special Operations Aviation Regiment, Army Special Operations Aviation Command	Sabre Army Airfield, Fort Campbell	D	MQ-1C Gray Eagle	2010
After deactivating E Company as a manned helicopter unit in 2007, the Army reactivated E Company in 2010 to operate the MQ-1C Gray Eagle. ¹³⁶ According to a 2019 mediate report, E Company is among the U.S. military's most deadly drone units and has deployed extensively in the Middle East and across the African continent. ¹³⁷				
F Company, 160th Special Operations Aviation Regiment, Army Special Operations Aviation Command ¹³⁸	Fort Campbell	D	MQ-1C ER	2018

TRAINING

- In 2009 and 2010, the Air Force overhauled the way it trains MQ-1, MQ-9, and RQ-4 pilots in order to meet growing demand. It created a dedicated career field—known as 18X—for officers who enter the Air Force to be trained as UAV pilots.¹³⁹ It activated four new squadrons—the 6th Reconnaissance Squadron, 16th Training Squadron, 29th Attack Squadron, and 9th Attack Squadron—to train new pilots and sensor operators.¹⁴⁰ And it moved specialized training for the MQ-1/9 from Creech Air Force Base to Holloman Air Force Base. In 2015, the Air Force took additional steps to prioritize UAV pilot training and retainment by expanding the number of Air National Guard units that fly drones and by permitting enlisted personnel to pilot the RQ-4 Global Hawk, the first time that non-officers were allowed to pilot aircraft since 1942.¹⁴¹ As of 2016, approximately one-third of MQ-1 and MQ-9 Reaper pilots were part of the 18X career field, the remainder being a mix of manned aircraft pilots who are temporarily assigned to fly drones and former manned aircraft pilots who had transferred to flying drones permanently.
- MQ-9 Reaper and RQ-4 Global Hawk pilot training begins with Undergraduate Remotely Piloted Aircraft Training (RPA URT), a program managed by the 558th Flying Training Squadron.¹⁴² At the Initial Flight Training course in Pueblo, Colorado, the future drone pilots learn to fly a manned trainer airplane. This course lasts between six and nine weeks. After earning their private pilot's certificate, recruits move on to the RPA Instrument Qualification Course and RPA Fundamentals Course at Randolph Air Force Base in Texas. These two courses last between three to four months. After completing the RPA URT, recruits move on to Formal Training Units, which are located at Beale Air Force Base if they are training to fly the RQ-4 Global Hawk and at Holloman Air Force Base if they are training on the MQ-9 Reaper. The Holloman program consists of several months of training on the Predator/Reaper Mission Aircrew Training System (PMATS), a simulator that replicates a ground control station, followed by

live flight training.

- Based at Fort Huachuca, the Army's 2nd Battalion, 13th Aviation Regiment is responsible for training all new RQ-7 Shadow and MQ-1C Gray Eagle operators and maintainers.¹⁴³ Unlike in the Air Force, Army UAV operators—known as 15Ws—are typically enlisted personnel. In 2006, the Army created the UAS Training Battalion Provisional, which was redesignated the 2nd Battalion, 13th Aviation Regiment in 2011. The Battalion is comprised of three companies that manage five programs of instruction. Phase one, which is known as the Common Core and lasts approximately nine weeks, provides instruction on basic aeronautical concepts, safety, and navigational. Phase two provides simulator and live flight instruction. In 2016, the Army announced that it was working to acquire a common control architecture that would allow operators to be able to pilot both the RQ-7 and MQ-1C with the same training.¹⁴⁴
- The Navy provides training for MQ-8 Fire Scout pilots at NAS North Island, NAS Norfolk, and NAS Jacksonville.¹⁴⁵ Unlike in the Air Force MQ-9 and RQ-4 community, the Navy does not have a unique class of MQ-8 pilots. Instead, the Fire Scouts are typically crewed by the pilots of the manned MH-60 helicopter who are trained to operate both aircraft. Air Vehicle Operator training lasts five weeks and Mission Payload Operator training lasts three weeks.
- The Navy and Marine Corps maintain three Training and Logistics Support Activity (TALSA) facilities dedicated to training personnel to fly Class I UAVs.¹⁴⁶ The facilities are located at Marine Corps Base (MCB) Camp Lejeune, North Carolina in; MCB Camp Pendleton, California; and MCB Kaneohe Bay, Hawaii. TALSA's offer basic instruction and qualification for the RQ-20B Puma, RQ-11B Raven, RQ-12A Wasp IV, PD-100 Black Hornet, InstantEye, and SkyRanger.

OPERATIONS

Country	Base	Equipment	Period	Operation
Iraq, Kuwait		RQ-2 Pioneer, FQM-151 Pointer	1991	Desert Shield, Desert Storm

The Army and Marine Corps were equipped with FQM-151 pointers for short-range reconnaissance; the Army, Marine Corps, and Navy were each equipped with RQ-2 Pioneers.¹⁴⁷ The Marine Corps' 1st, 2nd, and 3rd RPV Companies flew a combined 336 RQ-2 Pioneer sorties during Desert Storm and Desert Shield.¹⁴⁸ The Army's UAV Platoon, E Company, 304th Military Intelligence Battalion, 111th Military Intelligence Brigade completed 46 sorties during Desert Storm.¹⁴⁹ The Navy's RPV Detachment 1 and RPV Detachment 2, which were deployed on board the *USS Missouri* and *USS Wisconsin* for naval artillery spotting and reconnaissance, flew a total of 163 sorties.¹⁵⁰ In one notable incident, a group of Iraqi soldiers on Faylaka Island surrendered to a Navy RQ-2 Pioneer, marking the first—and perhaps only—time that humans have surrendered to a drone. Twelve Pioneers were lost and 18 damaged over the course of operations.¹⁵¹

(Right) An RQ-2 Pioneer on the *USS Wisconsin* in Desert Storm. Credit: U.S. Navy
(Left) A downed RQ-1 Predator in Bosnia om 1996. Image via the U.S. Library of Congress.

Bosnia	Gjader, Albania; Taszar, Hungary; Tuzla, Bosnia	RQ-2 Pioneer, Gnat-750, RQ-1 Predator	1994-1998	Joint Endeavor
<p>In 1994, the U.S. government deployed the Gnat-750, the predecessor to the RQ-1 Predator, and the RQ-2 Pioneer for Joint Task Force Provide Promise, the NATO intervention in Bosnia and Herzegovina. Gnat-750 operations over Bosnia were conducted by a small team of CIA personnel and General Atomics contractors from an airfield in Gjadar, Albania.¹⁵² The following year, a team of military personnel led by the Army deployed with the Predator to Gjadar. In 1996, the Predator was re-deployed to Taszar, Hungary, for surveillance missions over Bosnia. In September 1996, the Air Force's newly-formed 11th Reconnaissance Squadron assumed operational control of the Predator from the Army.¹⁵³ The Predator completed approximately 380 sorties over Bosnia in 1995 and 1996, accumulating some 2,290 flight hours. In 1996, the Marine Corps' VMU-1 deployed with the RQ-2 Pioneer to Boyington Airfield near Tuzla, Bosnia and completed 36 sorties in support of NATO peacekeeping forces.¹⁵⁴</p>				
Iraq, Kuwait		RQ-1 Predator, Desert Hawk	1998-2003	Southern Watch
<p>Operation Southern Watch was a U.S. campaign to monitor Iraqi military movements in southern Iraq and enforce a no-fly zone following the First Gulf War. Air Force RQ-1 Predators were deployed to the operation from 1998 until the operation ended in 2003.¹⁵⁵ Towards the end of Southern Watch, the Air Force deployed Desert Hawk small surveillance drones—which were then known as the Force Protection Airborne Surveillance System—for security at air bases in Kuwait.</p>				
Serbia, Kosovo	Taszar, Hungary; Petrovec Airfield, Macedonia	RQ-2 Pioneer, RQ-5 Hunter, RQ-1 Predator	1999-2001	Allied Force, Task Force Hunter
<p>During Allied Force, the NATO air campaign against Serbia in 1999, the U.S. used drones to identify Serbian military targets for airstrikes by manned aircraft and to conduct battle damage assessments.¹⁵⁶ The Air Force initially deployed the Predator to Tuzla, Bosnia, before moving operations to Taszar, Hungary. The Army sent Hunters to Skopje, Macedonia. Navy Pioneers deployed aboard the <i>USS Ponce</i> and were used to surveil Yugoslav naval vessels and to identify landing areas for U.S. Marines. Four RQ-1 Predators, eight RQ-5 Hunters, and three RQ-2 Pioneers were lost during the operation. In its after-action report to Congress, the DoD noted that although UAVs were “used at unprecedented levels during Operation Allied Force,” the experience exposed several issues with Pentagon drone operations, such as poor sensor quality and the inability to properly disseminate the intelligence.¹⁵⁷ Following the end of Allied Force, U.S. UAVs were deployed at least once more to the Balkans to support peacekeeping operations. U.S. Army deployed Hunters again to Petrovec Airfield in May 2001 amid clashes between a Macedonian militant group and the government.</p>				
Afghanistan		RQ-1 Predator	2000	“Summer Project”
<p>In the year prior to the U.S.-led invasion of Afghanistan in 2001, the Central Intelligence Agency deployed Predators to Uzbekistan to search for Osama bin Laden in neighboring Afghanistan, a mission known as the Summer Project.¹⁵⁸</p>				

Afghanistan	(Multiple)	(Multiple)	2001-	Enduring Freedom, Freedom's Sentinel
<p>In October 2001, the U.S. launched Enduring Freedom (OEF), marking the first operational deployment of the RQ-4 Global Hawk and the armed MQ-1 Predator. A handful of other drones such as the Army's RQ-5 Hunter and FQM-151 Pointer were also deployed at the outset of the war. The opening days of the conflict saw the first drone strike in combat, when a Predator targeted Mullah Omar, the leader of the Taliban, on October 7 (the strike was unsuccessful).^{159,160} Drones were gradually introduced in greater numbers as the conflict wore on.¹⁶¹ By 2012, the Army's UAVs alone had accumulated 376,203 flight hours in Afghanistan.¹⁶² Between 2011 and 2014, the Marines deployed the K-MAX to ferry cargo to remote bases, the first operational mission for cargo-carrying drones.¹⁶³ The Air Force's Reaper made its operational debut in Afghanistan in 2007.¹⁶⁴ In January 2018 the Air Force reported that it had deployed the equivalent of three squadrons of MQ-9 Reapers to Kandahar Airfield, the largest single deployment of the Reaper.¹⁶⁵</p>				
Pakistan, Yemen, Somalia, Libya	(Multiple)	MQ-1 Predator, MQ-9 Reaper, RQ-170	2002-	
<p>Since 2002, the U.S. government has engaged in a campaign of surveillance and strike operations against Al-Qaeda outside of areas of active hostilities. The scope of this campaign has gradually expanded to include groups affiliated with Al-Qaeda such as Al-Qaeda in the Arab Peninsula (Yemen), Al-Shabaab (Somalia), and Al-Qaeda in the Islamic Maghreb (Libya), as well as various regional affiliates of the Islamic State. Collectively, these operations are commonly referred to as the "targeted killing campaign" and have occurred primarily in Pakistan, Yemen, and Somalia, and, to a lesser extent, Libya. By and large, these operations are conducted by drones, though some of the operations have been carried out by manned aircraft and by special operations teams. The first targeted killing was conducted in Yemen's Marib province in November 2002, killing Qaed Salim Sinan Al-Harethi, an Al-Qaeda operative who is believed to have led the attack on the <i>USS Cole</i> in 2000, and five other individuals.¹⁶⁶ U.S. airstrikes in Pakistan peaked in 2010—around 120 strikes are thought to have been conducted in that year alone. Operations in Yemen and Somalia intensified between 2016 and 2018. As of early April 2019, the New America Foundation estimates that the U.S. has conducted a total of 414 strikes in Pakistan, 283 in Yemen, and 151 in Somalia since 2002.^{167,168,169} The U.S. government has argued that the strikes are the best way of targeting Al-Qaeda's leadership in their remote bases while limiting risk to U.S. personnel and civilians.¹⁷⁰ However, the U.S. has attracted criticism for injuring and killing civilians in the targeted killing campaign and for the government's lack of transparency.¹⁷¹ In 2013, President Obama issued new policies designed to limit the number of drone strikes and improve transparency.¹⁷² Since taking office in 2017, President Trump has lifted some of these requirements, including the requirement that the Department of Defense create and publish an annual report that contained estimates of civilian casualties.¹⁷³</p>				
Iraq	(Multiple)	(Multiple)	2003-2011	Iraqi Freedom, New Dawn
<p>At the outset of the Iraq War, the Air Force deployed one RQ-1 Predator, seven MQ-1 Predators, and one RQ-4 Global Hawk to the region.¹⁷⁵ Though the U.S. relied on this fleet in the opening months of the war—in one month, the Air Force's single Global Hawk located 55 percent of all time-sensitive enemy air defense targets—a December 2003 Defense Science Board report argued that "Service leadership still has not fully embraced the integration of UAVs into the force structure."¹⁷⁶ OIF gradually saw the widespread introduction of unmanned aircraft at the tactical, operational, and strategic level. This enabled lower-echelon formations to have unprecedented access to overhead ISR capabilities.¹⁷⁷ In order to meet growing demand from commanders in the field, a number of new systems made their operational debut in Iraq, including the Dragon Eye, RQ-11 Raven, ScanEagle, RQ-7 Shadow, and MQ-1C Gray Eagle.</p>				

Haiti ¹⁷⁸	Rafael Hernandez Airport, Puerto Rico	RQ-1 Predator, Global Hawk	2010	Unified Response
<p>The U.S. Air Force deployed the RQ-1 Predator and RQ-4 Global Hawk to support humanitarian efforts in the wake of the 2010 Haiti earthquake. The two drones surveilled the damage done to critical infrastructure, providing real-time video footage to international aid workers and first responders. Unified Response marked the first time that either the Predator or the Global Hawk had been used to support a humanitarian operation.</p>				
Libya	NAS Sigonella, Italy	RQ-4 Global Hawk, MQ-1 Predator	2011	Unified Protector
<p>Three RQ-4 Global Hawks and multiple armed MQ-1B Predators conducted approximately 450 sorties in Unified Protector, a NATO intervention in the Libyan Civil War that followed the U.S.-led aerial campaign known as Operation Odyssey Dawn.¹⁷⁹ Between April and August, the Predators conducted 101 strikes in the country.¹⁸⁰</p>				
Mali, Niger	AB 101, Niger; AB 201, Niger	MQ-1 Predator, MQ-9 Reaper	2013-	Serval (FR), Barkhane (FR)
<p>In 2013, the U.S. deployed Predators to Niamey, Niger to provide intelligence and targeting for French counter-terrorism operations in Mali.^{181,182} The deployment was initially led by the 3rd Special Operations Squadron. Over the course of the deployment U.S. Predators and Reapers have participated in other counterterrorism, counter-insurgency, and counter-crime missions in the Sahel, including operations by regional partner nations. In 2018 the DoD announced that the Nigerien government had permitted the U.S. to begin flying armed Reapers from its bases in Niger.¹⁸³ In 2019, the Air Force intends to shift these operations from Air Base 101 in Niamey to a much larger facility, Air Base 201, further north in Agadez. According to media reports, the CIA may also run drone operations from an outpost near Dirkou in northeastern Niger.¹⁸⁴</p>				
Iraq, Syria	(Multiple)	(Multiple)	2014-	Inherent Resolve
<p>Drones have figured in the U.S. campaign against the Islamic State began in August and September 2014.¹⁸⁵ Air Force Predators, Reapers, and Global Hawks involved in the campaign are based in Turkey (Incirlik AB), Jordan (Muwaffaq Salti AB and H4 AB), Kuwait (Ali Al Salem AB), and the United Arab Emirates (Al Dhafra AB), while Army Gray Eagles are based in Al Asad AB (S) in Iraq. Forward-deployed forces have also employed a range of Class I drones in the ground campaign in Syria and Iraq; for example, the Marines have deployed the Blackjack in both countries. In a January 2018 budget reprogramming request, the Navy reported that funding for the flight hours of the Marines' Blackjack in Inherent Resolve exceeded the appropriated budget by 300 percent, underscoring the extent to which the Marines were making use of the system.¹⁸⁶ U.S. ground special operations forces in Syria are believed to be equipped with the RQ-20B Puma and the Switchblade loitering munition.¹⁸⁷</p>				
Chad	N'Djamena International Airport	MQ-1 Predator	2014	
<p>In 2014, the U.S. deployed one MQ-1 Predator to Chad as part of an operation to rescue 250 Nigerian schoolgirls who were kidnapped by Boko Haram, an Islamist militant group.¹⁸⁸ The operation is believed to have lasted less than one year.</p>				

Cameroon	Garoua Airport	MQ-1C Gray Eagle	2015-	
The U.S. deployed at least one drone to Cameroon in October 2015 to support Cameroonian forces fighting Boko Haram. ⁸⁹ Approximately 200 personnel and at least one unarmed Army MQ-1C Gray Eagle remain stationed in Garoua, some 40 kilometers east of Cameroon's border with Nigeria. ^{190,191}				
Latvia	Lielvarde Air Base	MQ-1 Predator	2015-Unknown	
In 2015, the Texas Air National Guard's 147th Reconnaissance Wing deployed two MQ-1 Predators and 70 personnel to Lielvarde Air Base in Latvia. ¹⁹² The Predators were used to patrol Latvia's territorial borders and conduct training missions with personnel from Baltic partner nations. The deployment was funded by the European Reassurance Initiative, a U.S. program to support NATO allies in the wake of Russia's 2014 annexation of Crimea.				
Philippines		MQ-1C Gray Eagle, RQ-7B Shadow, RQ-20B Puma	2000s, 2017-	Enduring Freedom-Philippines, Pacific Eagle-Philippines
U.S. special operations forces have deployed with UAVs to the Philippines on several occasions since the early 2000s as part of operations targeting Abu Sayyef, an Islamic terrorist group aligned with Al-Qaeda. ¹⁹³ These UAVs included the Gnat, ScanEagle, Raven, Aqua Puma, and other unarmed systems for reconnaissance. ¹⁹⁴ A Gnat UAV crashed near Zamboanga in 2002. ¹⁹⁵ Although OEF-P ended in 2015, the U.S. military returned to the Philippines in 2017 to support the Philippine military's campaign against Islamic State-linked militant groups around the city of Marawi. ¹⁹⁶ Based on satellite imagery, it is possible that the Gray Eagle remains, as of this writing, deployed to Edwin Andrews Air Base on the Zamboanga Peninsula. The Marines deployed with the RQ-7B Shadow to support ground operations in the battle for Marawi. ¹⁹⁷ U.S. special operations forces are also believed to have deployed to the Philippines with the RQ-20B Puma. ¹⁹⁸				
Poland, Romania	Mirowslawiec Air Base, Camp Turzii	MQ-9 Reaper	2018-	
The Air Force deployed an MQ-9 Reaper to Mirowslawiec Air Base in May 2018 to conduct ISR and training missions. ¹⁹⁹ After a series of renovations and the addition of new facilities at Mirowslawiec, the Air Force declared the MQ-9 mission in Poland to be fully operational in March 2019. ²⁰⁰ The Reapers are operated by a mix of contractors and U.S. military personnel. In July 2019, the U.S. Air Force announced that it was temporarily relocating the Reapers from Poland to Camp Turzii, Romania while the runway at Mirowslawiec underwent repairs. ²⁰¹				
South Korea	Kunsan Air Base	MQ-1C Gray Eagle	2018-	
The U.S. Army announced in March 2017 that it intended to deploy the MQ-1C Gray Eagle to Korea. ²⁰² According to a statement by a U.S. State Department spokesperson, the Gray Eagle deployment was part of a package of measures that the U.S. took in response to North Korean missile tests. Based on satellite imagery, the deployment probably began in either mid-to-late 2018 or early 2019.				

EXERCISES AND PARTNERSHIPS

- In addition to foreign operational deployments, the U.S. has a long history of deploying drones overseas to participate in exercises and capacity building operations with partner nations. In one of the first of these deployments, the Army sent the 304th Military Intelligence Battalion equipped with the RQ-2 Pioneer to participate in the 1993 Team Spirit exercises in South Korea.²⁰³ More recently, a number of U.S. deployments of this kind have been to eastern Europe, where the U.S. has accelerated efforts to train partner militaries in the wake of Russia's 2014 annexation of Crimea and support for pro-Russian separatists in eastern Ukraine. In 2015, the Army's 173rd Airborne Brigade deployed with the RQ-7B Shadow to Yavoriv, Ukraine to participate in the Fearless Guardian training exercise with the Ukrainian national guard.²⁰⁴ In 2018, the Army's 1st Cavalry Division deployed the RQ-7B Shadow first from Zagan and then from Trzebień in Poland, part of the ongoing Operation Atlantic Resolve training mission.²⁰⁵ Other deployments, such as those to Latvia and Poland, have also supported capacity building.²⁰⁶

DOMESTIC OPERATIONS

- The U.S. military has at various times deployed drones to assist civilian public safety agencies with border security missions, counter-drug operations, and disaster response. In 1990, 1998, 1999, 2001, and 2002, the U.S. Marine Corps deployed with the RQ-2 Pioneer to the southern border as part of Joint Task Force Six, an inter-agency drug interdiction and immigration enforcement campaign.²⁰⁷ These operations, which are distinct from the Department of Homeland Security's drone operations, have each typically lasted for several months. According to a 2015 DoD Inspector General report, the U.S. military deployed drones in support of civil authorities fewer than 20 times between 2006 and 2015, although the report did not specify when or where these operations occurred.²⁰⁸ In 2017 and 2018, the Army deployed the MQ-1C and the Marines deployed the RQ-21 Blackjack for security operations on the U.S.-Mexico border.²⁰⁹ In 2018, the Air Force deployed the MQ-9 Reaper in support of firefighters in California and Oregon. In November 2018, the DoD revised its policy governing the use of UAVs in support of civil authorities.²¹⁰ The new policy delegates the authority required to approve some types of domestic operations from the Secretary of Defense to regional military commanders, a move designed to make the approval process less onerous.

DEVELOPMENT

- The XQ-58A Valkyrie is an experimental jet-powered Class III UAV built by Kratos Defense & Security for the Air Force's Low-Cost Attritable Strike Demonstrator (LCASD), also known as Loyal Wingman, program. The Valkyrie is designed to accompany manned fighter aircraft into combat and carry out a range of missions such as attacking enemy air defenses. It has an internal payload capacity of 227 kilograms, enough to carry two GBU-39 Small Diameter Bombs. Kratos unveiled a digital mockup of the Valkyrie in January 2017.²¹⁰ The Valkyrie completed its maiden flight at Yuma Proving Grounds in Arizona in 2019.²¹¹
- Skyborg is an Air Force concept for an autonomous low-cost attritable strike drone that could serve as a vessel for testing different artificial intelligence technologies that would enable complex, autonomous operations. The Air Force launched the program in October 2018 and unveiled a conceptual design for the system in March 2019.²¹² The Skyborg program appears to be separate and apart from the LCASD program. A future Skyborg UAV could operate alongside the Valkyrie. The Air Force expects to begin flight testing a Skyborg drone in 2021.²¹³
- The Orion is a long-endurance Class III fixed-wing UAV developed by Aurora Flight Sciences, a subsidiary of Boeing. Aurora began developing the Orion in 2006 and conducted the first flight of the aircraft in 2013.²¹⁴ Although the Air Force contributed funding to the development of the Orion, it has so far declined to acquire any of the drones, noting that it no longer has a requirement for such an aircraft. In January 2018 the Air Force awarded Aurora a \$48 million contract to continue the development of the system.²¹⁵
- Gremlins is a Defense Advanced Research Project Agency program to develop a swarm of low-cost, reusable Class I UAVs. Under the concept, the Gremlins, each of which are a few meters in length, would be launched and recovered by a manned C-130 transport aircraft. The Gremlins could be configured to carry out different tasks such as reconnaissance or electronic warfare. In May 2018, DARPA conducted a flight test at Yuma Proving Ground that involved launching and recovering a Gremlins air vehicle mid-air.²¹⁶ In March 2019, the U.S. Air Force announced that it was exploring a partnership with India's Defense Research and Development Organization to continue the development of Gremlins after the DARPA program ends.²¹⁷

BOTSWANA

INVENTORY

- The Botswana Defense Force (BDF) acquired at least one Hermes 450 from Israel in the early 2000s. A 2001 satellite image shows that at least one drone was based at Thebephatshwa Airport in southern Botswana.¹ In 2011, a Hermes 450 crashed outside of Thebephatshwa.² Although media reports at the time suggested that the crashed Hermes 450 would be replaced, there are no indications that the BDF Air Wing followed through with a replacement. Historical satellite imagery appears to show that the Hermes 450 ground control stations were removed from the air base in 2012 or 2013. It is probable that the BDF no longer operates the Hermes 450, although the current status of this aircraft is not clear as of this writing.

AIR FORCE

Name	HQ	Type	Equipment	Activated
Reconnaissance Squadron, Nigerian Air Force Tactical Air Command ³	Maiduguri Air Base	Partial	CH-3A, Tsaigumi	

TRAINING

- The Nigerian Air Force runs a two-year training program for UAV pilots. The first phase of the program takes place at the 401 Flying Training School at Kaduna Air Base and provides theoretical instruction on aerospace operations. For this phase, the Air Force reactivated the Mugin, an indigenously-produced UAV trainer aircraft that had been decommissioned due to a lack of spares.⁴ The second phase provides technical instruction on the CH-3A at Maiduguri Air Base. During this phase, each of the five pilots gained nearly 100 flight hours on the CH-3A. The first class of five pilots graduated in March 2018.⁵ Training was suspended for the remainder of 2018 and part of 2019, resuming in June 2019.⁶

OPERATIONS

- The Nigerian Air Force has deployed drones to support counterterrorism operations against Boko Haram in northeast Nigeria. In January 2015 the crash of a CH-3 revealed that Nigeria had acquired the aircraft and an undisclosed number of the drones were participating in campaign.⁷ Since then, the NAF

- has published several videos that purport to show the CH-3 engaged in airstrikes against Boko Haram.⁸
- The Nigerian Air Force has suggested that its drones may be used for other missions unrelated to counterterrorism. In a March 2018 statement, the NAF said that it would deploy drones to monitor domestic energy infrastructure.⁹ In June 2018, the Nigerian Customs Service said that it was working with the Air Force to deploy drones to catch smugglers.¹⁰

INFRASTRUCTURE

Name	Country	Latitude	Longitude	Affiliation	Activity	Notes

Kaduna Air Base	Nigeria	10°35'44"N	07°26'41"E	Air Force	Training, Test site	

DEVELOPMENT

- The Ichoku is a strike-capable drone reportedly under development by the Nigerian Air Force. It would be Nigeria's first indigenously-produced unmanned combat aircraft. The project was announced in February 2018.¹¹

SOUTH AFRICA

INVENTORY

Model	Make	Origin	Class	Intro	Qty	Operator	Notes
Seeker 400 ¹	Denel Dynamics	South Africa	II	2018*		General Staff	
Indiza ²	CSIR	South Africa	I	2019*		Army	

**Estimate*

ACTIVE ACQUISITIONS

- The South African National Defense Force (SANDF) is reportedly in the process of introducing the Seeker 400. In its 2018 financial review, Denel Dynamics reported that it had delivered Seeker 400s to the SANDF and that the system was undergoing additional test and evaluation in the 2018/2019 fiscal year.³ It is not entirely clear when these systems will become fully operational or which service will be responsible for operating them. Media reports have suggested that they will be flown by the Defense Intelligence Division, the SANDF's military intelligence wing.⁴

INACTIVE

Model	Make	Origin	Class	Period	Qty	Operator	Notes
Scout	IAI	Israel	II	1980s	5	Air Force	"RPV-1B"
Seeker 1	Denel Dynamics	South Africa	II	1987-Mid 1990s		Air Force, COCO	Operated by contractor for several years after the 10 Sqn was disbanded

PERSONNEL

INACTIVE

- The South African Air Force activated the 10th Squadron as a dedicated UAV squadron in 1986. The 10th was headquartered at Air Force Base Potchefstroom and equipped with the Scout and Seeker. Media reports in 2016 indicated that the South African Air Force had plans to reactivate 10th Sqn.⁵ This has not, however, been confirmed by an official record, nor does 10th Sqn appear on the SAAF's list of squadrons as of this writing.⁶

OPERATIONS

Country	Base	Equipment	Period	Operation
Angola		Scout, Seeker	1987-1988	Modular, Hooper, Packer
The SAAF's 10 Squadron was deployed in the South African Border War in the late 1980s. ⁷ Both the Scout and Seeker were deployed for ISR and artillery spotting. ⁸ Three Seekers were downed by enemy fire in various operations.				
Democratic Republic of Congo		Indiza	2019-	MONUSCO
The South African National Defence Force announced in March 2019 that it was equipping its peace-keeping force in the DRC with Indiza drones. ⁹ The 2nd South African Infantry Battalion was expected to deploy to the DRC by mid-2019. ¹⁰				

DEVELOPMENT

- The Long Endurance Modular Unmanned Aerial Vehicle (LEMU) is a twin-engine Class I aircraft developed by the Council for Scientific and Industrial Research (CSIR). Based on CSIR's Modular UAV, which first flew in 2009, work on the LEMU appears to have started in 2016. CSIR has developed two variants of the LEMU, one with an internal combustion engine and another with an electric engine.¹² For both variants, the max take-off weight is 65 kilograms with up to 20 kilograms of payload capacity. As of June 2019, CSIR intends to begin flight tests by 2020.¹³

EXPORTS

Country	Model	Make	Class	Status	Notes
Algeria ¹⁴	Seeker 200	Denel Dynamics	II	Active	
UAE ¹⁵	Seeker 200	Denel Dynamics	II	Active	
MENA Country*	Seeker 400	Denel Dynamics	II		

**In its 2018 financial review, Denel Dynamics reported that it had received an order for six Seeker 400s from a Middle Eastern country. Media reports suggest that this country is the UAE, though this has not been confirmed.*

SUDAN

INVENTORY

Model	Make	Origin	Class	Intro	Qty	Operator	Notes
CH-3*	CASC	China	II	2010s		Air Force	(status unclear)

**In a February 2019 interview with Shephard Media, Sudanese Air Force Commander Lt. Gen. Pilot Salah Eldin Abdelkhalig Saeed said the SAF had acquired at least one CH-3.¹ This statement has not, however, been confirmed by any other sources.*

INACTIVE

Model	Make	Origin	Class	Intro	Qty	Operator	Notes
Ababil-3*	Qods	Iran	II	2008-Unknown			(status unclear)
DB-2*	DB	China	I				(status unclear)

**It is probable that these systems are no longer active, though it is difficult to say with certainty.*

OPERATIONS

Country	Base	Equipment	Period	Operation
---------	------	-----------	--------	-----------

South Sudan		Ababil-3, DB-2	Early 2010s	
-------------	--	----------------	-------------	--

The Sudanese Armed Forces (SAF) deployed drones to South Sudan before and after the 2011 referendum granting South Sudan its independence.² The SAF lost multiple Ababil-3s over South Sudan in 2008, 2012, and 2014.³ A report by Conflict Armament Research found that Sudanese forces had also deployed the DB-2, a Chinese-made fixed-wing remote-control aircraft, over South Sudan.⁴ At least two of these drones were reportedly captured by forces aligned with the Sudan People's Liberation Movement-North in 2014 and 2016.

INFRASTRUCTURE

Note:

This section is comprised of satellite imagery for a selection of drone bases and test sites. Due to the lack of publicly-available imagery for certain areas and periods, some significant sites are not included in this section, such as Afghanistan’s Kandahar Air Base and Israel’s Palmachim Air Base. Annotations on the imagery highlight visible equipment used in drone operations. All imagery was sourced from Google Earth. Attribution information for third-party data providers is located in the bottom-right corner of each image. All bases in this section are believed to be in active use unless otherwise stated in the metadata. For images of drones deployed in foreign countries, the name of the state actor is included in the annotation and in the metadata.

ALGERIA

Tindouf Air Base	
Location	27°42'08"N 008°09'55"W
Image Date	17 April 2019
Activity	Deployment
Notes	

Aïn Oussera Air Base	
Location	35°31'20"N 002°52'56"E
Image Date	9 March 2019
Activity	Headquarters
Notes	

AZERBAIJAN

Baku Lokbatan Airport

Location 40°20'53"N 049°40'29"E

Image Date 16 September 2017

Activity Headquarters, Training

Notes

Salyany Air Base

Location 39°38'45"N 048°59'45"E

Image Date 29 April 2018

Activity Training

Notes Army training site.

Sangachaly Air Base

Location 40°07'47" N 049°27'18" E

Image Date 25 July 2017

Activity Deployment

Notes Probably remains an active Heron site, although the imagery is out of date.

BRAZIL

Santa Maria Air Base

Location 29°42'39"S 053°41'32"W

Image Date 29 July 2018

Activity Deployment

Notes Intermittently active as a Hermes 450 site.

BOTSWANA

Thebephatshwa Airport

Location 24°13'15"S 25°20'55"E

Image Date 13 February 2003

Activity

Notes Inactive.

CAMEROON

Garoua Airport

Location 09°20'09"N 013°22'12"E

Image Date 30 November 2018

Activity Deployment (US)

Notes

CHINA

Aksu Airport

Location 41°15'45"N 80°17'30"E

Image Date 21 December 2018

Activity

Notes Possibly a CH-5 test site in 2018. Probably no longer active.

Anshun Huangguoshu Airport

Location 26°15'38"N 105°52'23"E

Image Date 8 November 2018

Activity Test site

Notes Also served as test site for the BZK-007, Divine Eagle, and Wing Loong 1D.

Baotou "UAV Test Site"

Location 40°52'28"N 109°35'08"E

Image Date 27 April 2018

Activity Test site

Notes FH-98 and BZK-005 test site. Several new hangars added later in the year.

Daishan Naval Air Base

Location Active

Image Date 15 March 2019

Activity Headquarters

Notes HQ for East Sea Fleet UAV Regt. First UAV activity noted in 2013. Aifield underwent renovations 2016 to 2017.

Dehong Mangshi Airport

Location 24°23'54"N 098°31'29"E

Image Date 9 April 2019

Activity Deployment

Notes

Guyuan Liupanshan Airport

Location 36°04'34"N 106°13'05"E

Image Date 25 July 2019

Activity Test site

Notes Wing Loong 2 site since 2017.
Probably still active.

Hotan Air Base

Location 37°2'22"N 079°51'48"E

Image Date 29 June 2019

Activity Deployment

Notes Site of an intermittent
Wing Loong 1 deployment
2016-2018. Wing Loong 2 site
since early 2019.

Jiayuguan Airport

Location 39°51'25"N 098°20'29"E

Image Date 4 April 2019

Activity Test site

Notes Caihong-series site

Kashi Air Base

Location 39°32'29"N 076°01'09"E

Image Date 19 February 2019

Activity Deployment

Notes Site of an intermittent Wing Loong 1 deployment 2014-2018. Wing Loong 2 site since early 2019.

Lhasa Gonggar Airport

Location 29°17'52"N 090°54'43"E

Image Date 2 November 2017

Activity Deployment

Notes Status unclear.

Ningbo Air Base

Location 29°55'22"N 121°34'25"E

Image Date 17 January 2019

Activity Deployment

Notes Previously served as a BZK-005 site while Daishan AB underwent renovations.

Pucheng Neifu Airport

Location 34°50'1"N 109°32'38"E

Image Date 31 September 2018

Activity Test site

Notes FL-1, JY-300, and AT200 test site. Unclear whether it remains active.

Sanya Naval Air Base

Location 18°17'12"N 109°27'51"E

Image Date 20 May 2019

Activity Deployment

Notes

Shenyang Air Base

Location 41°52'15"N 123°26'19"E

Image Date 27 May 2016

Activity Test site

Notes Probably inactive as a UAV site.

Xintai Air Bas

Location 36°00'06"N 117°37'33"E

Image Date 27 May 2014

Activity Test site

Notes Probably inactive as a UAV site.

Yishuntun Air Base

Location 43°35'15"N 123°34'41"E

Image Date 27 January 2019

Activity Deployment

Notes More than three Soar Dragon UAVs are believed to be currently based here.

DJIBOUTI

Chabelly Airfield

Location 11°31'N 43°04'E

Image Date 20 June 2019

Activity Deployment (US)
